MISSISSIPPI VALLEY RAILROAD, NORTH.

On page 87, vol. 2 of the Record, we spoke of this road, but could give no definite information relative to it. We have since learned the following facts from the President of the Company.

The road was chartered by the state of Missouri, Feb. 23, 1854, with full power to survey, mark, locate and construct a railroad from the city of St. Charles to some point on the Des Moines River, on the northern boundary of Missouri. The Company proposes to connect with the roads having their southern terminus at Keokuk, Iowa, thus making it a link in a great line of road extending from New Orleans to Minnesota.

Mr. Britton, the President, has favored us with a map of the proposed line, by which we see that the route will follow the course of the Mississippi River, only a short distance from its bank, through the counties of St. Charles, Lincoln, Pike, Ralls, Marion, Lewis, and Clark, passing through the towns of Bowling Green, New London and Palmyra.

A large amount of stock has been subscribed in the above named counties, and a strong effort will be made to obtain the aid of the state at the next session of the Legislature.—A bill is also pending in Congress for a grant of land in aid of its construction. The friends of the road confidently hope to put it under contract next year.

Mr. Britton proposes to tender his resignation as President of the Board at its next meeting; it is expected that some Eastern man of influence and business tact will succeed him, so that as soon as the financial affairs of the country become settled, the road may be put in motion.

NORTH ALABAMA & GRAND JUNCTION, and the SOUTH-WESTERN AIR-LINE EXTENSION RAILROADS.

We are indebted to J. C. Avery, C. E., for notices of these roads, and a fine map showing their location with their valuable connections.

The North Alabama & Grand Junction Road is projected to extend from Decatur, in Alabama, on the Memphis & Charleston Railroad, to Columbus in Mississippi, where it will meet the branch of the Mobile & Ohio Road. The Air-Line Extension Road will take up the route where the North Alabama & Grand Junction Road terminates, at the intersection of the Mobile & Ohio Road, and carry it to Jackson, being that portion of the same line within the state of Mississippi.

The North Alabama & Grand Junction road as projected, will be 131 miles in length, and can be constructed very cheaply, nearly four-fifths of the distance being remarkably level, and only 23 miles being heavy work.

The Air-Line Extension road is already chartered, between the termini named above. This route has been ascertained to be very feasible, having no grades exceeding 30 feet to the mile.

These two lines of road, it is contended, will form a valuable link in the great chain between the North-East and South-West, leading a distance of upwards of 1700 miles, in an almost unbroken air-line, from Jackson, Miss., to Bangor, Me., as well as from Jackson, westwardly via Vicksburg, Shreveport, etc., to the Pacific. At Decatur, also, connections will be made with roads leading northwardly to Cincinnati and other cities.

Mr. Avery, in his remarks, gives many cogent reasons why these roads should be built, among them the productions of the country requiring means of transportation that cannot be had in any way so cheaply and so extended—the opening of valuable markets, now closed to that section of the Union, and the means of cheapening to the inhabitants the necessaries of life that come from abroad.

The route proposed for the North Alabama Road passes through the very garden-spot of the Union, and would doubtless amply repay its construction in the course of a very few years, from its freight traffic alone. The citizens of Alabama have become aroused to the necessity of railruads; but they do not yet sufficiently realize their importance to war-

rant us in the belief that much will be done in railroad building for some time to come, though numbers of lines have been projected, surveyed and portions of them contructed.—There must be something more than talk; action must be had, and self-dependent action, too. Assistance from abroad must not be counted upon until enough has been done at home to satisfy capitalists that they run no risks in investing their means in these improvements. Alabama has abundant means; she needs railroad communications as a means of transportation for her surplus produce, let her locate and build them judiciously and she will soon rank among the wealthiest in the Union.

PITTSBURGH & ERIE RAILROAD.

The Conneautville, (Pa.,) *Banner*, published in Crawford county, brings us the proceedings of a public meeting of citizens of that county, in reference to this railroad, which it denounces as a repetition of the Franklin Canal railroad game.

From the resolutions it seems that the Board of Directors of the Pittsburgh and Erie Railroad Company, instead of building a road direct from Pittsburg to Erie is now engaged in building a lateral road running east and west, and intended to form part of a through route between New York and Ohio, and is using for this purpose the bonds of Crawford county, issued for its subscription to this road under the belief that the Directors intended to build a road from Pittsburg to Erie. The plea in justification of this is, that the company has, by its charter, the right to build branch roads, and that this is one of that description. "But," say the citizens of Crawford, "this branch has no trunk road, and is therefore no branch at all." The resolutions also state that the Board of Directors has not only failed to make any proper effort to build the main road, but has refused to let the city of Erie and others make the northern part of it from Jamestown to Conneaut, on the Ohio, so that the coal trade which this road should carry, to Erie, will be diverted to a town in another state. The meeting appointed committees to correspond with the commissioners of Crawford county, the Governor, Attorney General, and the citizens of Philadelphia, Pittsburg and Erie, as to the adoption of means to stop the illegal building of this road, they say, now progressing, and which must prove highly detrimental to Pennsylvania interests.

That small portion of Pennsylvania lying upon the lake shore, between the New York and Ohio state lines, seems prolific of difficulty to railroads. It is just so situated as to break all eastern connections, should its citizens so desire, and there seems to be no lack of will so to do. We are not posted as to the above matter, and give it as the current news of the day.

NORTH-WESTERN RAILROAD OF VA.

We are pained to notice that this project seems to retrograde rather than progress. The Parkersburg *Gazette* of the 26th ult., says of it:

"Our railroad prospects have taken a long stride backward. Up to the 20th inst., there was a full force employed along the line, the work progressed rapidly and everything seemed to be going on swimmingly. At the hight of this apparent prosperity, a mandate issues from the Engineering department, directing Contractors to limit themselves to specified amounts of work within the next month. In order to comply with this unexpected and unwelcome order, many hands have been discharged and will soon be scattered to the four winds, in search of employment upon other roads—this too, at that season of the year when most progress ought to be made upon the heavy sections.

We suppose pecuniary embarassment is the cause of this reduction in the number of hands. We trust however that as the horizon lightens up in the financial firmament this road will feel its revivfying effects, and progress with its former activity, and ere many months be finished throughout thus affording another and shorter Eastern connection.

LAKE SHORE RAILROAD—INJUNCTION GRANTED.

The case against the Erie and North-East Railroad was decided on the 6th inst. The opirion was given by Chief Justice Black.—The conclusion is against the company, as follows. It appears that the defendants have built a railroad, part of which is within the present limits of the City of Erie, and on certain streets, and another part is on the bed of a certain public road, in Harbor Creek township and that said road in those parts is a public nuisance. Ordered that within four months defendants shall break up such parts, and remove the materials, so as to leave the road in as good order and condition as before, and that defendants make the borough of Erie within the limits of the estern 1842 wterminus. That within four months they shall change their route accordingly, and make their western terminus at the east line, within the borough of Erie, as it was in 1842. The reconstructed parts to be supplied according to plans to be submitted to the Court.

The effect of this injunction will be to make a curve in the Erie and North-East road at Harbor Creek, so as to cross the highway at a greater angle than it now does. It will also change the location of the track through the borough of Erie, and stop it at the eastern line of the *old* plat of the town.

Here is both a victory and a defeat for the *Erians*. Fearing some similar decision, the limits of the City of Erie have been recently extended considerably, for the purpose of causing a wide break in the line of the road within the city limits; but the decision has knocked all these calculations in the head, by restricting the limits of the city, so far as this road is concerned, to what they were in 1842, making but a small distance.

The second point deprives the city of Erie of the assumed right to take up the Railroad track in the streets, destroy bridges, &c. The third point settles the gauge question in favor of the Company. The Erie Constitution says that it is the intention of the Directors of the Erie and North East Road to proceed at once to comply with the mandates of the Court.

The citizens of Erie begin to find that it is somewhat expensive to play railroad games as they have done. Passing through that place, a few days since, we made inquiries as to this especial fact, and found that the citizens had taxed themseves 12 *mills on the dollar*, for two years, to meet the expenses already incurred. Rather expensive luxury, this.

The decision of Judge Black has caused much excitement at Erie, inasmuch as it was unexpected, and upsets all their calculations. What plea will be resorted to next, it is hard to say. It is hardly probable that they will let the matter rest.

MARIETTA & CINCINNATI RAILROAD.

Our readers, generally, are aware, that the above road has been opened to Greenfield, from this city, (24 miles,) since the 25th day of April last. Some curiosity having been expressed to examine the *doings* of the road since its opening, we have procured from the proper department the following abstract.—These earnings are not paraded as an inkling of what the road will net, when connected with Cincinnati on the one hand, and the Iron and Coal region on the other! It is, in fact, expected that the mineral freightage alone, will pay the entire expenses of the road, leaving the passenger returns and other freightage, as profits on the investment. These are but the humble beginnings:

PASSENGER EARNINGS.		FREIGHT EXPENSES.	
April	$ 25.51		
May.....	1134.25	175.69	
June.....	737.67	181.88	
July.....	1038.60	164.10	
	$2931.03		$521.67
FREIGHT EARNINGS.		FREIGHT EXPENSES	
April.....	310.18		
May	417.37	91.56	
June	327.19	126 62	
July	231.49 $1225.13	101,04	$319.22
	4256.16		849.89
Net balance, 3m. 5d's.....			3415.27
Or 1344.05 a month.			

The road will be opened to Cincinnati between the 20th and 30th of the present month. A full stock of cars and locomotives, to accommodate the fall trade and travel will be put upon it at once.—*Scioto Gazette.*

NOT BAD.—The cars on the Connecticut River Railroad came down rather crowded recently, so much so that several gentlemen had to resign their seats to lady passengers. One of the gallant victims seemed to enjoy his deprivation much, and kept up a fire of wit and repartee that sensibly relieved the trials of the trip. As the cars stopped at Willimansett, the conductor as usual entered the car, and cried out, "Will-a-man-*sit!*," "Yes, by thunder," cried the wag, "if I can get a chance!" —*Taunton, (Mass.,) Gazette.*

COMPLIMENTARY TICKETS.

The action of the Railroad Convention recently held in New York city, on the subject of "free passes" over railroads, has developed a number of facts, which gives the whole subject a different aspect, and relieves the "Press" from a weight of censure hitherto attached to it, from the supposed fact that editors were bought up by the various railroads, by complimentary tickets; and that, being "dead heads" over certain lines, their tongues were tied, and their pens trammelled to such an extent as to materially interfere with the discharge of their duties as impartial journalists.

The New York *Tribune* has probed the subject, and demonstrates clearly that the Press has been widely misunderstood and misapprehended in this matter. It says:

With regard to free passes on railroads, we have made special inquiries, and have collected reliable data, and we must say, much as we knew before, of the facts, we are quite astonished at the extent of the abuse, and wonder that the companies have not long since protected themselves against it. Upon enquiry of the Hudson River Railroad Company, we were informed that they commenced the present year *with the determination to issue no free passes whatever; but the Legislature in a manner compelled them to abandon their position.* No sooner was the Legislature organized than notices were given of intention to introduce certain bills abridging the Company's privileges, putting them to great trouble to answer frivilous inquiries, looking into their arrangements with neighboring companies, and other equally annoying movements. One of these resolutions was aimed at the Harlem road also, *demanding to know whether there were any mutual arrangements between the two companies for the transmission of passengers and freight.* The drift of these resolutions was apparent, and the representatives of the two roads, well knowing the practice of former years had been to send the members free passage tickets some days before the beginning of the session, prepared an answer to one of the resolutions, *crammed their pockets full of free tickets*, to run from the first of January to the first of May, and thus armed, appeared in the lobbies of the Capitol. Senators, Assemblymen, Clerks, and other officers, and reporters got their tickets, and all the notices and bills proposed to defend the people against the terrible Hudson River and Harlem monopolies, slept the "sleep that knows no waking," on the general orders calender. The reports of the two companies were printed and ordered on file, and for the remainder of the session not a whisper was heard prejudicial to the "best managed railroads in the State." Thus about *three hundred and fifty season tickets—free on all trains were disbursed*—a greater number at one dash than was ever offered to the Press of New York city since railroads were invented.

But this was not the end. The immaculate Common Council of this city, hearing of the signal success of the Legislative conspiracy, suddenly began to feel a remarkable solicitude about the termini of these roads, how far they should run with steam, and other little local matters; and committees were sent up to Albany to fix things right. Within a few days the required number of tickets was forthcoming—about ninety, if the distribution was fair—the committees came back, their report was "satisfactory," and that was the last that was heard in the City Hall about railroad nuisances. Whether the committees charged railroad fare to the City while traveling on these free tickets we do not know; the Controller's report will tell. Aside from these notorious instances, the Hudson River Railroad Company has issued no season tickets this year, except to officers of connecting roads. They have, however, given trip tickets—passes to go and return within a given period—to the number of one thousand, since the 1st of January; and of these, only *thirty-two* have been issued to persons connected with the Press of this City.

On the New York & Erie Road, according to very careful computations, the dead-heads would produce, if they paid regular fare, $160,000 a year—equal to 20,000 through passengers, or nearly 60 per day. A specimen of coolness is recorded in the dead-head archives of this Company which is worthy of immortality. One day not long since, the Secretary received a note from an Assistant Superintendent of one of the City railroads, (fare five cents) asking the Erie Company to pass a young man to Dunkirk and back free, and the favor would be reciprocated on the City road!

On the New York and New Haven Road in 1853, there were 8,174 free passes given; thus far this year, 2,065—a reduction in the ratio of 75 per cent. The Norwich & Worcester, Boston & Providence, and Fall River Roads, pass from two to four thousand yearly. These lines formerly passed all freighters, but the practice has been discontinued. The City railroads issue free tickets to the Mayor, Heads of Departments, Common Council, Police-Captains, and from one to three to each of the daily papers. The Third Avenue Company will serve as a specimen: *They issue 202 free tickets, of which the Press has 13.*

The figures show the extent of the free ticket system on railroads, and how far the Press is a recipient. Upon looking over the records, we find the free class to consist mainly of men engaged in the freighting business, hotel keepers and their clerks, members of the Legislature and State Officers, City Councilmen and officers, Judges of Courts, clergymen, officers and employees of other roads, and editors. These statements show not merely the free tickets used, but all favors that are sent to the Press. It will be seen that even on the roads at their doors, where free passes would be desireable, if any where, *not one per cent.* of the dead-heading business of this City is chargeable to our newspapers. These facts so fully expose the fallacy of the idea that the Press is purchased by free tickets, that further refutation would be idle.

In view of these facts, the *Tribune* recommends the rooting out of the practice entirely; and says that the Press will be largely the gainers thereby.

We are not sufficiently well posted as to the practice of our Western roads, to give correct data as to the actual number of "dead-heads." At the commencement of the present year, a change was made by most of our companies as to who should receive complimentary tickets, by which the number was greatly reduced; though it still remains large. The Cleveland *Herald* says that the Cleveland, Columbus & Cincinnati Company has issued upon the average, 1,200 passes per month; and that the Cleveland & Toledo Company has, within the last five months issued free tickets to the amount of $9,156 65. We note also that rules have been adopted upon all lines, that conductors shall not pass any one over their respective routes, without a special pass from their own officers; whereas heretofore a pass over any one road was generally received as good over any other connecting road.

While fully coinciding with our cotemporaries as to the fact that complimentary tickets are in most cases, of little pecuniary value to editors, inasmuch as they can seldom find time to make them available; and that, if only the *cost* of editorial notices of railroads be considered, these passes do not pay the expense of composition. Yet we view the connection between the Press and railroads as involving other than mere pecuniary considerations.

Railroads are the leading feature in the internal improvements of the country; every class of society, merchants, manufacturers, capitalists, mechanics, farmers, all are alike deeply interested in their progress, consequently, they deservedly occupy the greater portion of the attention of the community at large, and thus become legitimately a leading theme of remark and discussion in the newspapers of the country, and in such a manner too, that while the railroad system is greatly benefitted by the influence of the Press, the Press has no opportunity, except in particular instances, of making specific pecuniary charges in return; nor should such be made, the subject being a matter of interest to the readers of newspapers as well as of profit to the railroads; nevertheless, the least that railroad companies can do, under the circumstances, is to accord the courtesies of their several lines to the Press freely; and this we have, with scarcely an exception, ever found them ready to do; and this too, the Press can as freely accept at their hands without any fear of compromising that self-respect and independence of character which it is presumed should attach to the editorial profession.

ERIE RAILROAD AFFAIRS.—The condition of the Erie Railroad Company still agitates financial circles in New York, almost to the exclusion of other topics. Some leading capitalists interested in the various securities of the company have obtained permission from the Directors to institute an investigation on their own behalf into the affairs of the company. Such an investigation, the New York *Post* thinks, if carried on independently of the directors, will be of service to all parties who want to know the whole truth. Mr. James Brown, of the firm of Brown, Brothers & Co., is mentioned as the leading name in this inquiry.

ROCK ISLAND RAILROAD BRIDGE.

In a recent issue of the RECORD, we copied a statement to the effect that the order of Secretary Davis to remove the trespassers from the government property on Rock Island, did *not* include the Bridge Company. We find this was an error; the order *did* include the bridge and workmen.

In a communication to the Democratic Banner, under date of August 25, ultimo, Mr. John P. Cook, seemingly an agent of the Bridge Company—gives a history of the whole affair, differing in the main but little from what we have already given in the RECORD, as to facts; but he adds as follows, while speaking of the Secretary of War's order for removal.

"This order was conceived in secret, and no one at Washington, outside of the War Department, knew of it until the officer in possession of the order had arrived in Chicago, and made known his business to the Marshal of Illinois.

Mr. Farnam immediately telegraphed me, inquiring about the nature of the order; I called upon Gen. Jessup, who informed me that the order was a general one and intended to keep squatters, &c., from settling on the Island, and would not interfere with the Railroad Company, if they were entitled to the right of way. The next news that came to Washington from here was, that everybody, including railroad hands, were notified to leave in fifteen days or they would be put off. At the request of the attorney for the Company, I proceeded at once to get the necessary papers for him to assert the rights of the Company in the courts of the country.—Among other records and papers wanted were some five or six orders and letters on file in War Department.

On the 5th inst., I made a most respectful request by letter to the Secretary of War to furnish me with certified copies of the orders &c., saying that I would call for them in person at half past 2, P. M.

About the hour named I called, and was told by Mr. Davis' Chief Clerk that I could not have the copies requested.

I then had an interview with Secretary Davis, and told him that the records were wanted to be used as exhibits in a judicial proceeding wherein it was proposed to try the rights of the Railroad Company to lay their track across Rock Island, to which he replied that the Department was not bound to furnish copies of their records to every man that might apply for them, and he would not furnish the copies asked for.

It was during this interview that I learned for the first time that Secretary Davis was personally and locally hostile to the bridging of the Mississippi at this point.

He only manifests his hostility in words, when he says he will order the first pier removed that may be placed in the channel, as an obstruction to navigation; but he issued the order to clear Rock Island for *no other* reason than to put a stop to the work on the Island, thinking thereby to cut off the only chance to build the bridge. The evidence of this is the fact that his order was a general one; and when those persons having possession of the head of the Island complained that it would ruin them, and destroy property worth thousands of dollars, they were permitted to remain until the Government may want the land for other purposes, while, at the same time, the warriors are ordered to concentrate their charge against the railroad men.

After this explanation, Mr. Editor, I think you will agree with me that the order of the War Department was "intended to obstruct the grading of the railroad across the Island," and to prevent "the erection of the railroad bridge at this point."

Why, sir, this same Jeff. Davis not only abuses the powers of his own Department in violating the sovereignty of the state of Illinois, (for the state of Illinois never ceded to the United States her sovereignty over Rock Island,) but when Senator Shields of the state undertook to pass a bill through the U. S. Senate, giving the Company the right of way across Rock Island, Mr. Davis pitches into the U. S. Senate in person, and actually defeated the bill by appealing to the members of the Military committee to prevent its passage."

The difficulty is furnishing matter for the courts, whose decision will be looked for anxiously, as this has an important bearing upon the interests of railroads of the Northwest.

EXPRESS TRAINS.—The idea of running express trains, was first put into practice by Mr. Stephenson, on the line from Manchester to Liverpool.

By adopting a long boiler, six wheel engines of great power, and making few stoppages on the road, Stephenson succeeded in carrying passengers from London to Liverpool, a distance of 212 miles, in four hours and a quarter, being at the rate of fifty miles an hour, stoppages included.

The Great Western Express, from London to Exeter, England, is made to go at the rate of sixty miles an hour, including stoppages. Supposing the locomotive which draws such a train, to have driving wheels seven feet in diameter, those wheels will revolve five times in a second; the valve moves, and the steam escapes ten times in a second—but as there are two cylinders which act alternately there are really twenty puffs or escapes of steam in a second. Such a locomotive speed is equal to nearly one-fourth of that of a cannon ball; and the momentum of a whole train, moving at such speed, would be nearly equivalent to the aggregate force of a number of cannon balls equal to one-fourth the weight of the train.

The *State of Maine* says that arrangements have just been completed for running, on and after the 2d October, an Express Train from Boston to Portland, and Portland to Quebec in one day. This will then be the shortest and quickest route possible between N. Y. and Quebec.

MONTGOMERY & PENSACOLA RAILROAD.—From late advices we learn that the location of this line is being proceeded with rapidly, between Montgomery and Greenville, in Alabama. There is but little said, but the work goes steadily onward.

TO RAILROAD MEN—GOOD TIME-KEEPERS.

The importance of a good watch to Railroad Conductors, is acknowledged; but the difficulty has heretofore been to obtain a perfect timekeeper. We are happy to say that this desideratum has been fully attained, and Conductors can now obtain watches upon which every reliance can be put. We take the following from a Boston exchange, and commend its perusal to our railroad men.

A PERFECT WATCH.—One of the greatest triumphs of human ingenuity, in the present day, is the production of a perfect watch.

To attain exact time, a watch must remain unaffected by changes of temperature, position and motion; and to reconcile these various difficulties is the great object and aim of the watch-maker. Great changes of temperature by expanding and contracting the balance, cause great irregularities in the performance of the watch, to remedy which the compensated balance is used. A compensated balance is a union of two metals, brass and steel, so adjusted as to counteract the effects of heat and cold, by keeping the center of gravity of the balance always in the same place, thereby securing uniformity of time in all temperatnres.

Next in order to cause a watch to go accurately in all positions, and under every variety of motion, it is necessary that friction should be reduced to the smallest possible amount; and as friction increases as the cause is removed from the mainspring, shonld be the next point of importance. Three kinds of escapements have been invented for the use of perfect timekeepers. The first, the Chronometer Escapement, is acknowledged to be the most perfect, as it reduces friction to the smallest possible amount; but it is also found to be impracticable for pocket use, on account of its delicacy of construction which renders it liable to stop, by sudden jars, such as are communicated to the body by horseback riding, jumping, or the motion of railroad cars. The same objection may be made to the Duplex Escapement, which is next in point of perfection to the Chronometer,—and we now come to the third, or Lever Escapement, which, while it is free from the objections urged against the first two, yet bears the character of being more frictional, and consequently not so reliable as a measurer of time.

Mr. Charles Frodsham, of London, has succeeded in overcoming the last difficulty, and now presents to the world a watch, that under all circumstances of violent motion, change of position, and variation of temperature, will keep perfect time. We have seen some watches of Mr. Frodsham's make, worn by Railroad Conductors, that have not varied thirty seconds in six months, and have not been set for nearly two years, and yet they are considered the strongest watches ever made.

The inventor of this wonderful timepiece is now reaping the reward of his patience and ingenuity, in a world-wide celebrity, for no one in search of a perfect timekeeper is satisfied until he has a "Frodsham."

Messrs. Beggs & Smith, Jewelers, &c., No. 6, West Fourth street, are the agents for the sale of these watches, for the Western and Southern States. They are gentlemen whom we can commend to the public, as worthy of patronage.

MONETARY.

The Money Market at the East is well supplied with capital, and readily obtained on call loans at legal rates. The banks are accommodating their customers to the full extent of their means. Street rates range from 10 to 12 ℔ cent., the minimum for best names. Railroad paper finds no sale. Contrary to the predictions of some wiseacres, the fall payments have been promptly met, and no failures have been noticed among the merchants. The indications for business, however, are not quite so cheering as could be wished. We therefore quote the Money Market as easy, and were it not for a continued lack of confidence we are aware of nothing to prevent a continuation of the present state of affairs.

The Stock Market has taken a sudden rise, and prices have advanced almost as rapidly as they recently declined. A correspondent, under date of 16th, says:—

"The Stock Market to-day is weak for Erie; but still it seems difficult to depress it much below the quotations now ruling. Other fancies sympathize with Erie; but solid stocks, and good Western roads in particular, are firm at an advance, and with a further upward tendency. Cincinnati, Hamilton & Dayton, 70 bid, 85 asked; Cleveland, Columbus & Cincinnati, 104½ @ 106; Cleveland & Pittsburgh, 54 @ 55."

Erie has reached as low as 29, since when it has rallied, and is now firm at 45¾. There are several causes for this rise, the most probable of which, the desire of certain parties to control the election on the 10th proximo.

There is a marked increase in the amount of private transactions in various securities, both for investment and foreign account.

Foreign Exchange rates at 109 @ 109¾.

The sales during the past week have been as follows:

At the West money matters, during the past week, have been rather short, which is attributable, however, rather to the scarcity of currency for business operations, than to the absence of a sufficiency of capital.—The rates of interest still remain high, say 12 to 24 ℔ cent., the minimum for number one paper.

The cry of short crops has had a tendency to delay the payments of the country merchants, which causes inconvenience to the city merchant; but upon the whole we feel that the market is decidedly easier than for sometime heretofore. The majority of the currency now in circulation is of a good character, and passes freely in business transactions. The resolution of the bankers, declaring all issues under $10, uncurrent, went into operation yesterday. This will effect business but little; the determination of several of the Indiana Free Banks to redeem their issues, at Indianapolis or Madison, in Eastern Exchange, at ½ ℔ cent. premium, will prevent any bad effects from their refusal by the bankers, as well as have a tendency to render the "Bank Law" somewhat like others of our statutes—a dead letter.

Eastern Exchange is firm at 1¼ @ 1½ per cent. premium; the latter for Bankers' checks.

The Stock Market presents a decidedly improved state of affairs, and we confidently look for a continuation of this improvement; our best stocks are being sought for and will amply repay investment at present prices.—The completion of several leading lines will also bring new favorites into market. So that ere the winter is fairly upon us we shall have heavy transactions to note in the Stock sales.

OHIO & INDIANA RAILROAD.—At the late session of the Directors of this road, at Crestline, Ohio, Judge Hanna was elected President, in place of Dr. Merriman resigned. The company may well rejoice at the election of Judge Hanna, whose name will inspire courage and efficiency in all connected with the road, and give a dignity to the Company which could not be found in any Westen man.

S. S. Morse, was elected ticket and freight Agent.

The work of the Road is going on rapidly, being in a state of completion about five miles west of Van Wert, and from Fort Wayne, about eleven miles east, leaving about sixteen miles yet to be completed, which space will be closed by the 10th of October at most.

Sickness has retarded the progess recently, but it having abated now, the work goes on well.

NEW BORING MACHINE.

At the Birmingham Institute of Mechanical Engineers, Mr. Samuel H Blaekwell, of Dudley, described "Kind's Improved Apparatus for Boring;" a new plan of boring, in successful use in the coal mines of Belgium, and salt works in France, but not yet tried in this country. The bore hole was made larger than usual, and about 10 or 12 inches in diameter, but instead of cutting out and crushing the whole of the material, a center bore was left solid, of about two-thirds the diameter of the bore hole, and this solid portion was brought up by the boring tool in cylindrical pieces about a foot in length. These served in a very complete manner to show the formation of the strata bored through; but, in addition, they afforded the means of measuring with great accuracy the angle of dip of the strata, and also the direction of the dip, the lifting rod being guided in the ascent so as to prevent any twisting in the specimen piece brought up; and by the information thus obtained from the bore-holes, an important advantage was gained by preventing useless outlay in sinking pits. Specimens were exhibited of cylindrical pieces brought up from a depth of 200 yards; and it was stated that a considerable economy was effected in the cost and time of boring, as compared with the ordinary plan, in consequence of an improvement in the construction of the apparatus, by which the rods themselves were prevented from falling with the heavy chisel, and consequently a light wood rod could be employed instead of the heavy iron rods.

Natural Curiosities in South-Western Virginia.—The Abingdon *Virginian*, in an article devoted to the natural advantages and wonders of Southwestern Virginia, says:

"And we have natural curiosities, some of them grand and wonderful. We have heretofore spoken of the Natural Bridge of Scott, of which that of Rockbridge is a minature.—The arch sweeps in a pretty regular curve two or three hundred feet across Stock Creek, leaving a tunnel large enough to shelter all the elephants in the jungles of Ceylon, with a carriage road on the summit, four hundred and fifty feet above the rapid stream that tumbles through the tunnel and washes its base. We have in this county, a few miles west of us, a perpendicular fall of water of about one hundred feet; four or five miles north of us, another stream that falls twice that distance in three grand consecutive leaps; a spring a few miles east of us that has ebbed and flowed twice in twenty-four hours since Noah's flood; and a few miles south of us the Passaic Falls in miniature. We have caves and cliffs and gorges where perhaps the foot of man has never trodden, and crags upon which the eagle perches in safety and gazes at the sun."

☞ A "cold water safety steam engine" has been invented. Steam is formed by injecting cold water into heated generators. It takes less room and requires less fuel than the present steam engine, and can be built at one third the cost, so the inventor claims.

Fort Madison and Iowa Southern Railroad.—This road was formerly known as the Fort Madison, West Point, Keosauqua and Bloomfield Company. We learn that some $600,000 have already been secured, and the work is expected to be completed from Fort Madison to Bloomfield, 66 miles, in the course of two and a half years. The engineers are now locating the road, and will soon be prepared to report. The articles of incorporation give the Company power to extend their line through the southern tier of counties, westward to the Missouri river, whence the change of name of the Company.

Ohio and Mississippi Railroad.—The following gentlemen were on the 5th inst. elected Direetors of the O. & M. Railroad, Western Division, for the ensuing year:

John O'Fallon, Wm. H. Belcher, Samuel Gaty, John L. Aspinwall, (of N. Y.,) Solon Humphreys, do, H. D. Bacon, J. H. Alexander, Sidney Brecse, (Ills.,) Alfred Kitchell, do., Jas. P. Chouteau.

The number, it will be perceived, is ten,—it having been reduced from thirteen, the number of which the Company was formerly composed.

Col. O'Fallon declined a re-election as President of the Board, and H. D. Bacon, Esq., was chosen to succeed him. The other officers are J. H. Alexander, Esq., Vice President and Treasurer, and George K. McGunnegle, Secretary. They are able and competent, and, we presume, will be continued.

NOTICE TO CONTRACTORS.

Terra Haute and Alton Railroad.

SEALED PROPOSALS will be received at the Engineer's Office in Shelbyville, Shelby Co., Illinois, until Wednesday, Sep. 27, inst. at sundown, for the graduation, masonry, trestle work and ties, on the Terra Haute and Alton Railroad, from the Chicago Branch to the main trank of the Illinois Central Railroad, being about 50 miles.

Plans and specifications of the Eastern Division can be seen at the Engineer's Office at Terra Haute, Indiana, and of the middle Division at the Engineer's Office in Hillsboro.

A large portion of this work is very heavy and offers great inducements for Contractors to give it their attention. Payments in cash mostly.

(*Adjoining the First Presbyterian Church.*)
CINCINNATI, O.

HAVE received from Mr. Simon Willard, Boston, Agent for the United States, the sole and exclusive agency for the sale of CHARLES FRODSHAM'S NEW SERIES OF IMPROVED CHRONOMETER WATCHES, in the states of Ohio, Indiana, Illinois, Michigan, Iowa, Wisconsin, Missouri, Kentucky and Tennessee.

In the Watches of the New Series, Mr. FRODSHAM has succeeded by a more perfect method of compensation, a more correct adjustment in isochronism, and an entirely new and peculiar construction of the train, by which more power is obtained without increase of size, in producing timekeepers of wonderful and unrivalled accuracy. The great importance of the improved watches is a perfect regularity of time under every variety of climate, motion and position. So perfect are the adjustments, that the most violent exercise, such as horseback riding, jumping, etc., produces on them no sensible effect They are therefore, particularly adapted to Railroad purposes.

These watches having been subjected to the severest tests for the past three years, and having proved themselves perfect in all the essentials of correct timekeeping, are recommended with confidence to those in search of good watches, as the best article ever introduced into the American Market.

Liberty is given to refer to the following gentlemen, who, among many others, have proved the excellence of Charles Frodsham's Watches as timekeepers:

Gen. John S. Tyler		Massachusetts.
John E. Thayer, Esq.		"
Enoch Train,	"	"
E. C. Bates,	"	"
F. W. Thayer,	"	"
Wm. Whiting,	"	"
Geo. M. Thacher,	"	"
David Dyer,	"	"
Alvin Adams,	"	"
Billings Briggs,	"	"
David Weld,	"	"
Hon. Ebenezer Lane,		Sandusky,
E. F. Osborne, Esq.		Ohio.

The Prices of the New Series Gold Cases, are According to Size, viz:

SIZE 12	
" 14	$230
" 16	
" 18	250
" 20	275
" 22	300

Recommendations:

Boston, Sept. 3, 1853.

The Compensated Lever Watch I purchased of you, made by Charles Frodsham, London, No. 7360, has varied but thirty seconds from mean time in six months, by actual daily comparison with your regulator.

Yours, &c., ALVIN ADAMS.

Mr. Simon Willard.

Boston, Feb. 4, 1854.

Mr. S. Willard Dear Sir—The Frodsham watch, No. 7557, I purchased of you last October, has performed wonderfully well. I have compared it almost daily by your Astronomical clock, and its variations for ninety days is but one second, or a loss of but one-hundredth of a second per day. I consider it better than any Marine Chronometer I ever used.

Yours truly,
FISHER A. NEWELL,
Late master of Sch., Honolulu.

Sandusky, Ohio. Jan. 1, 1854.

Mr. S. Willard, Dear Sir—More than six months ago I purchased of you two of Frodsham's best watches—up to this time, one of them, No. 7571, has altered from mean time but twenty-seven seconds, and the other, No. 7517, but twenty-three seconds in the same period.

Yours, respectfully.
E. F. OSBORNE.

To Mr. Simon Willard.

Gentlemen—On the 1st of April last I procured from Mr Willard, of Boston, one of Frodsham's improved series of watches. It was regulated and set to Cincinnati time. It has not, in that period, been suffered to run down, nor have the hands been moved, and to day it is 20 seconds only slow. Respectfully yours,

HENRY O. AMES,
Sup,t Cin. Ham. & Dayton Railroad.
August 18, 1854.

To Messrs. Beggs & Smith.

The following is an extract from a letter of William Brown, Esq., Springfield, Ohio, engineer on the M. R. & L. E. R. R., who has personally kept the rate of several of Frodsham's watches.

"Finally from what I have known of Frodsham's watches, I am very strongly impressed with the idea, that they are a decided improvement on all other timekeepers, and were they set in gimballs and used with the same care, I think their performance would equal that of Mr. Frodsham's celebrated box chronometer, and would answer the same purpose for determining longitudes."

Sept. 21 6*

Notice of Copartnership.

MR. PETER MARIE. heretofore of the firm of Decoppet & Co., has this day formed a copartnership with Mr. Rudolph Kanz, (for many years with the banking house of Messrs. L. Von Hoffmon & Co.,) under the firm of MARIE & KANZ, at 27 William street. Their attention will be devoted to the purchase and sale on commission of Stocks, Bonds and Foreign Exchanges, and to the negotiation of business paper.

New York, Sept. 1, 1854. [sept. 7-1*

ALBERT H. NICOLAY,

AUCTIONEER.

HOLDS his regular auction sales of Stocks, Bonds, and other securities, every Monday and Thursday, at 12½ o'clock, at the Merchants' Exchange. First class Stocks, and Bonds, at private sale.

Office No. 4 Broad street, New York.

ADRIAN H. MULLER & CO.,

AUCTIONEERS

Of the City of New York.

Hold their regular Auction Sales of Stocks, Bonds and other Securities every Wednesday at 12½ o'clock, at the Merchants' Exchange. They would respectfully tender their services in the negotiation of the same, either at private or public sale.

Office, No. 2, Pine Street, corner of Broadway, Metropolitan Bank Building.

DENNEY'S DIVIDED CAR AXLE.

PATENTED JANUARY 31ST, 1854.

THE ATTENTION OF RAILROAD COMPANIES is respectfully invited to an examination of the merits of this valuable invention, which offers to add largely to the safety of life and property.

The valuable features of this arrangement of axle are, a saving of full fifty per cent. in motive power on crooked roads: the rails are protected from being destroyed by the flanges of the wheels coming in contact with them on the curves, as is the case with the stiff or rigid axle, which not only destroys the rail but puts a constant strain upon the wheel and axle, causing the wheel on the inner rail to trip or revolve upon the rail under the weight of the car and its load, while the opposite wheel is traversing its greater distance; the tendency of which, is to wear the wheel flat, and cause it, or the axle, to break sooner or later. There is less danger of the car leaving the track from its having become spread.

Axles fitted in this way do not require to be near so large, and yet contain more strength than the common axle, for the reason that the liberty given to the wheels, which allows them to accommodate themselves to the curvatures of the road, removes wholly the strain thrown upon the ordinary axle; and therefore, it requires no more strength of iron at any point between the wheels, than is contained in the bearings, which in the ordinary axle, is not more than one-third of the strength of the other portions of the axle.

The elongated bearing which forms the connection is so proportioned as not to wedge or become tight in the alloy, the wear being almost imperceptible, requiring to be set up not oftener than once in twelve months, by a slight tightning of the screw nuts. If, from long service, the alloy becomes worn out, it can be refilled, making it as perfect as when first filled up, and the gauge of the wheels will never become changed so as to injure the running of the car.

It is after a series of the most careful experiments, conducted through a period of time sufficient to test in the most satisfactory manner, the real merits of divided car axles, and a thorough and practical test in real service of over two years, that we now offer to Railroad Companies one that we are assured will give universal satisfaction in its operations, and both simple and cheap in its construction.

We are now ready to dispose of rights to use the above axle on the following terms: We guarantee full and perfect satisfaction by giving ample time to thoroughly test its merits, and will require no payment to be made until such satisfaction has been given. All applications to be made to

SAMUEL L. DENNEY,

Plain	do	do	1-32 to 1 inch thick.
Pure	do	do	

Pipe and Manhole Rings, all sizes;

Square or Rope Packing, do.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agent of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.

2d, They are a great deal cheaper.

3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations. This is a new and important invention. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the COLDEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils, -10 casks, assorted weights n w in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3. 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Leland's Superior C. S. Car and Auger Bitts.—All sizes.

Brass Kettles, and Sheet Brass, &c.—Brass Kettles, assorted from 6 to 30; Sheet Brass assorted from No. 0 to 30; Brass Wire, do do do.

Star Breast Chains.—Four casks of those superior double-linked Chains, just received.

Walker's Trace Chains.—70 casks of those superior goods, warranted full length and sizes, 8 to 20 links, straight and twisted, now in store.

American Anvils.—Eagle brand, faced with with cast steel, and warranted by the manufacturers equal to Armitage's Mousehole.

Plated Spoons.—Plain, tipped, and threaded heavy plate, on best quality of German Silver.

Premium Gimlet Screws.—10,000 gross just received.

Mill Saws. Hoe & Co.'s C. S. Wm. Rowland's, and W. H. Rowland's 6, 6½, 7, 7½, and 8 ft

Cross Cut Saws.—Hoe & Co.'s C. S., Johnockerell's C. S. and G. S., Wm. Rowland's and W. & H. Rowland's 5, 5½, 6, 6½, 7, 7½, and 8 feet Also, 4 and 4½ feet Tennon Saws.

Axes—1000 doz. Axes, assorted Yankee and Kentucky patterns, first, second, and third quality

Nails.—4000 kegs Shoenberger's and Wheeling Nails, now in store.

Railroad Line.

Cincinnati, Hamilton & Dayton Railroad.

Summer Arrangement.

COMMENCING WEDNESDAY, JUNE 20th, 1854.

TRAINS will run by standard time, which is seven minutes faster than that of Cincinnati.

First Train

At 6 o'clock, A. M., Lightning Express for Dayton, Crestline, Pittsburgh, Philadelphia and Baltimore.

Second Train

At 6.10 A. M., for Hamilton, Richmond, Indianapolis, Terre Haute, Lafayette and Chicago, direct.

Third Train

At 8.20 A. M., for Dayton, Sandusky, Toledo, Detroit, Chicago, Cleveland, Buffalo, New York, Boston, Pittsburgh, Philadelphia, Baltimore and Washington.

Fourth Train

At 2 P. M. for Dayton, Greenville and Union.

Fifth Train

At 3.30 P. M., for Hamilton, Richmond, Indianapolis, Terre Haute, Lafayette and Chicago.

Sixth Train

At 5 P. M., for Dayton, Troy and Piqua, and intermediate stations.

Seventh Train

At 6.30 P. M., for Hamilton and intermediate stations.

The 1st Train, Express,

Will stop only at Hamilton and Middletown.

2d, 3d, 4th, 5th and 6th Trains,

Will stop at all regular stations.

The Seventh Train

Will stop at all way and flag stations.

The 1st Train

Will connect at Crestline at 12.30 P. M., with the Ohio & Pennsylvania Train for Pittsburgh, Philadelphia, Baltimore, etc., forming a direct and continuous line for each of these cities. Cars run through to Crestline without change. Baggage checked to Pittsburgh.

2d Train

Will connect at Richmond at 9.05 A. M., with Train of Indiana Central Road for Indianapolis; arrive at that place at 12 M., thence to Terre Haute, Lafayette, or Chicago without detention. Time as short as by any other route.

3d Train

Will connect at Dayton at 10.45 A. M., with Mad River Train, and arrive at Sandusky at 4 P. M., and go immediately on board the splendid steamers **St. Lawrence** and **Mississippi**, to Buffalo; thence at 7.30 A. M., with Buffalo and N. Y. City Road, to New York; arriving at that place at 10 P. M., also at Crestline 4.20 P. M., with Ohio and Penna. Train for Pittsburgh, Philadelphia, Baltimore and Washington.

The Same Train

Will also connect at Clyde with Cleveland and Toledo Train to Toledo, Chicago and intermediate points; and at Sandusky at 5 P. M., with steamer **Bay City**, for Detroit. Also, with Dayton and Michigan Railroad to Troy and Piqua, and at Piqua with Doyle & Co's Canal Packet Line to all points on Wabash and Miami Canals.

Fourth Train

Will connect at Dayton with Dayton and Greenville Railroad to Greenville, Union, and all points on Bellefontaine and Indianapolis Railroad.

Fifth Train

Will connect at Richmond at 6.40 P. M., with Indiana Central Train for Indianapolis, Terre Haute, Lafayette.

Passengers will bear in mind that the following rates of fare, via Lake Steamers, include both Meals and Staterooms, and that the fare to Philadelphia and Baltimore is One Dollar cheaper, and one less change of cars than by the Columbus route.

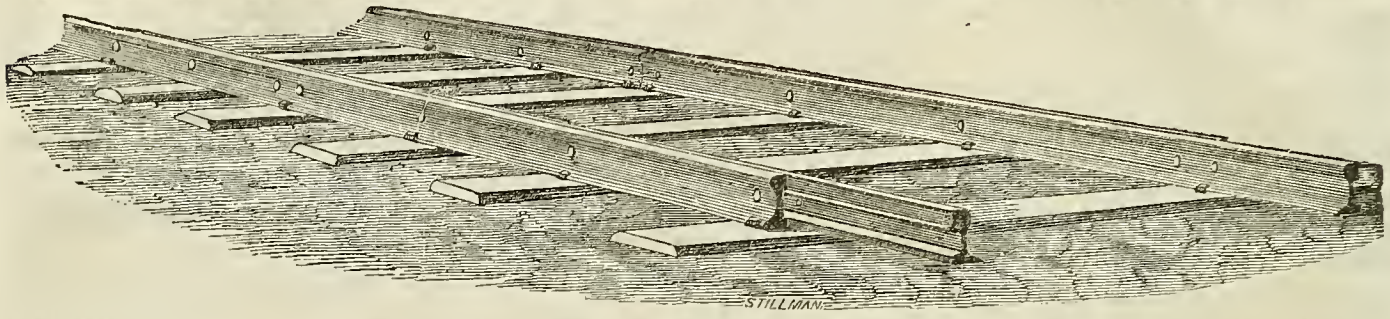
The Evening Train of the Maysville and Lexington Road, leaves Paris at 5 o'clock, P. M., enabling passengers by this route to reach Lexington at 6 o'clock, P. M. Returning, leave Lexington by the 7 A. M. Train of the Maysville and Lexington Road for Paris, leave Paris by Messrs Thurston & Thompson's line of Omnibusses at 8.30 A. M. arriving at Cynthiana in time for dinner, and connect with the train for Covington at 1.30, P. M., arriving at Covington at 5.30 P. M.

Accommodation Train leaves Cynthiana at 6 o'clock A. M., stopping at all regular and flag stations upon the road, and arriving at Covington at 10 10 A. M. Returning, leave Covington at 3.15 P. M., stopping as above, and arrive at Cynthiana at 7.40 P. M.

Passengers by this train can leave home in the morning, pass five hours in Covington or Cincinnati, and return home before dark.

The Express Train will stop only at the stations named. Passengers for other points must take the Accommodation train.



Freight trains, for the present, will leave Covington Mondays, Wednesdays and Fridays; leave Cynthiana Tuesdays, Thursdays and Saturdays.

Freight will be received at Covington and Cynthiana up to 4 o'clock P. M., for the train of the following morning.

J. M. DOUGHERTY,
Superintendent.

Jy. 20.

WINSLOW'S
PATENT COMPOUND RAIL.

THIS RAIL, which is represented by the aoove, bas now been in use on several Roads for upwards of three years; during which time it has become established among Railroad Managers as realizing the advantages of a

THEORETICALLY PERFECT RAIL.

Its advantages over the common form of "T" Rail are—a saving in the wear and tear of Machinery—it saves, to a great extent, in the repairs of track—it secures a high rate of speed with the same power, and what is certainly of equal importance, complete protection against some of the accidents to which roads are liable Being practically a continuous Rail for the entire length of the road, without break at the ends of bars, the jarring motion communicated thereby in passing over the common "T" Rail is avoided, as is also its effects upon Cars and Machinery. The comfort of travelers must of course be greatly increased.

This Rail is now manufactured at Hanging Rock Iron Works, upon the Ohio River, and at Mt. Savage Iron Works, Maryland. Specimens of the Rail and patterns of the same will be gladly shown, as well as information in relation thereto, given by application to

A. S. WINSLOW, Nos. 9 & 11 West Second Street, bet. Main and Walnut Sts., CINCINNATI.

J. F. WINSLOW, Troy, New York.

KENTUCKY LOCOMOTIVE WORKS.
CORNER OF KENTUCKY AND TENTH STS.
LOUISVILLE, KY.

THE Proprietors of the Kentucky Locomotive Works would respectfully inform Railroad Companies and the public generally that, having completed their establishment, they are now prepared to receive and execute orders with fidelity and dispatch.

They will contract for

Locomotives, Passenger, Baggage, Freight, Gravel and Hand Cars,

Of every style and pattern, as well as all kinds of St and Machinery required for railroads.

Particular attention will be paid to repairing, which they have every facility.

They are also prepared to contract on favorable terms for building all kinds of Machine Tools, such as Turning Engines, Lathes, Planers, Drills, Slotting, Spliting, and Shaping Machines, of every variety of pattern.

Having also a large FOUNDRY connected with the establishment, orders for Castings are solicited, and will be filled with promptness.

Car Wheels of any pattern can be furnished or short notice. Double and single plate and Spoke Wheels of all sizes constantly on hand.

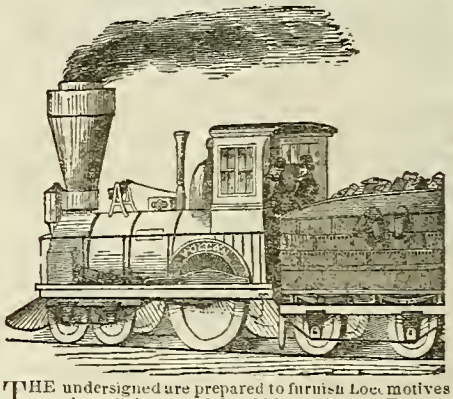
☞ Communications or orders must be addressed to
OLMSTED, TENNYS & PECK,
je.8-tf Louisville, Ky.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Reservoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.



The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.

WILLIAM SHERBURNE,
PRINCIPAL AGENT,

CARHART'S IMPROVED TURNTABLE.

Now building for 13 of the Principal Roads in Ohio, Indiana, New York, New Jersey, and North Carolina.

This Table, together with an Engine and Tender of 30 Tons Weight, can be Turned by One Man in 25 Seconds.

RAILROAD COMPANIES in want of *Turntables* of a permanent and durable character, at a low price, are respectfully referred to the annexed references. The undersigned being confident that the manner of turning engines by his Table is the most permanent, expeditious, and cheapest in the United States, solicits the attention of Engineers, and others, to his improvement. The undersigned being a practical mechanic, and having devoted his time, for the past five years, exclusively to the construction of Turn and Transfer Tables, Draw and other Bridges, is prepared with every facility for executing orders in that line with promptness and satisfaction.

The price, which is always based upon the use of the best materials and best workmanship which can be procured in the market where used, can be determined only by the locality.

DESCRIPTION OF PLAN.

Fig. 1, of the above cut, represents the foundations, consisting of *Bank* and *Track Walls*, the latter made of cut, the former of hammer-dressed stone, with cut stone coping. The Track is bent of the ordinary T rail, spiked and leaded to the stone track walls. The Center Pier is made of cut stone, with a step for screw and pivot bolted to the same.

Fig. 2, shows the framing.

Fig. 3, is a side view of Main Truss, with the mode of gearing, including the mitre-wheels, iron crank frame, rack and pinion, foundations, pivot wheels and pedestals.

Fig. 4, gives a perspective view of rim, segments, decking, etc.

Fig. 5, is an end view of the main trucks, with pedestals and wheels.

Fig. 6, is a screw for pivot, 6 inches in diameter, working in a steel step through a nut for adjustment.

Fig. 7, shows a cross section of track wall, well, and pedestal.

REMOVAL.

The Office of the Railroad Record has been removed to No. **106** West Fourth St., north side, between Vine and Race streets, in the building occupied by the Cincinnati & Cleveland Short Line, the Cincinnati, Lebanon & Xenia, and the Cincinnati & Dayton Short Line Railroad Companies.

The location is in the very center of Railroad business, and but a few steps from the Burnet House. Full files of railroad reports, maps, newspapers and other documents can always be found at this office, and it will always afford us great pleasure to give any information, and answer any queries on railroad matters, when in our power. We cordially invite railroad men from the country, when visiting our city, to honor us with a call and avail themselves of the facilities of our office.

☞ **Orders for all kinds of Railroad Printing received and promptly attended to at the Office, No. 103 West Fourth Stree .**

Covington & Lexington Railroad Opened to Paris.—The opening of this road to Paris was duly celebrated on Tuesday last.—The directors of this company deserve commendation for the energy displayed in the prompt completion of this heavy undertaking. Daily trains will now run regularly between the cities of Cincinnati and Lexington. This is but the first link in the great Southern chain, and we hope soon to be able to chronicle the completion of the second link, and then the third and final one which will open to us the whole South.

COMMERCE OF CINCINNATI AND LOUISVILLE.

The annual reports of the cities of Cincinnati and Louisville, on Trade and Commerce, are before us. They are very interesting documents, and serve to show the rapid increase, and great extent of the internal commerce concentrating in the Ohio Valley. Louisville being situated at the Falls of the Ohio, has some natural advantages not possessed by Cincinnati; but these advantages have been more than balanced by the great artificial improvements extending in every direction from this city. Indeed, no place in the United States has profited so much, by a well devised system of canals and railways, as Cincinnati. It has extended her trade from a diameter of 150 to 600 miles; or in other words, from an area of 15,000 square miles to one of 250,000--multiplying the commercial resources of Cincinnati, full *fifteen fold!* In all the articles of southern products, her markets extend from Buffalo to Galena; and in those of her own manufacture, she covers the whole Ohio Valley. The Ohio and Mississippi railroad on the west, is about to extend her arms, with a strength and facility unequalled, to regions beyond the Mississippi; while on the east, the Cincinnati and Marietta railroad is about penetrating a region of coal, iron and salt unequalled on the continent. So, also, Louisville is now connected with the North by the Jeffersonville and New Albany railroads, and the South by the Lexington railway.

The population of Louisville is supposed to be about 70,000, and that of Cincinnati 160,000. Louisville is more exclusively a *commercial* town, though its manufactures have recently very much increased. Cincinnati is the largest manufacturing town in the Valley of the Mississippi.

With these remarks we will present a comparative view of the leading articles *imported* into Cincinnati and Louisville. The report of Louisville, for some reason or other, does not give the *exports*.

Articles.	Imported into Louisville in 1853-4.	Imported into Cincinnati in 1853-4.
Flour, bbls	19,665	427,464
Whisky, do	32,044	285,243
Bacon, casks	4,252	14,900
Do bbls	11,279	29,387
Do lbs	.....	27,059,917
Coal, bushels	1,443,600	8,198,090
Corn, do	175,000	745,455
Lard, kegs	54,391	174,864
Iron, pieces	74,076	380,405
Do bundles	14,467	72,780
Do tons	9,471	14,256
Tobacco, hhds	6,475	8,744
Do boxes	10,190	33,353
Cheese, do	21,721	216,892
Coffee, bags	41,486	91,425
Merchandize, p'kages	186,990	897,800
Sugar, hhds	22,181	61,461
Do bbls	13,665	25,441
Do boxes	305	2,349
Molasses, bbls	27,710	86,430

This comparison, while it exhibits an extensive trade in both cities, shows so great a preponderance in Cincinnati that it seems quite disproportioned to the population. The proportion of population is as 1 to 2½; but the difference in trade is much greater. The *excess* of Cincinnati in the leading imports, is—

In Flour	2,000 per cent.
In Whisky	800 "
In Bacon	700 "
In Tobacco	60 "
In Iron	400 "
In Coal	500 "
In Lard	200 "
In Corn	300 "
In Cheese	900 "
In Coffee	120 "
In Sugar	200 "
In Molasses	220 "
In Merchandize	400 "

There are a great variety of other articles imported into both places, but these are the principal ones, and exhibit very clearly the difference in trade between these cities.—There is one great *principle* to be deducted from it—that Internal Improvements and Domestic Industry are the great sources of civic prosperity. Cincinnati has manufactures, railways and canals, all devised and carried into execution by able, energetic and public-spirited citizens, such as few places have ever had; Mind and Industry, working in rich natural resources, have made her great, and given her a position and commerce unequalled in the Valley of the Mississippi.—But cities are not permanent. They are liable to rapid decay. If Cincinnati would preserve her prosperity, she must remember how it was acquired. She must reward her public spirited citizens, and encourage Mind and Industry. Louisville, also, has commenced a career of manufacturing and improvement; and she will flourish in the same proportion with which she puts forth these energies.

The growth of commerce in Cincinnati exceeds anything recorded of commercial progress. In 1826 the entire value of her exports and imports did not exceed *four millions.* In 1854, the value of the leading articles of export and import exceed *one hundred and ten millions;* and if the unenumerated articles could be included, would probably reach *one hundred and fifty millions!*

The trade in Groceries has been the slowest to advance, as in this branch the competition of all the Eastern cities, and of Louisville, in the South, was the greatest; yet within the last five years this branch of business has also advanced with great rapidity, and Cincinnati now supplies with the leading articles, an extent of country equal to 100,000 square miles. Sugar is sold at this place to supply the whole North, from Oswego, N. Y., to Chicago, Ills. Coffee meets with more competition; but that also, is extending over the same, from this place. In the last year, the stock on hand had so accumulated that the trade was less active. Yet, taking a period of five years, the increase is very great, as the following statement will show:

	Exports of Sugar. *hhds.*	Exports of Molasses. *bbls.*	Exports of Coffee. *bags.*
In 1849-50	9,650	25,878	22,030
In 1850-51	13,000	25,098	38,158
In 1851-52	20,360	48,866	43,654
In 1852-53	31,515	65,056	67,122
In 1853-54	44,119	63,381	48,634

The value of commerce in these articles has

trebled in five years. At the same time the manufacturing industry of Cincinnati has advanced almost equally—a proof of which may be found in the immense increase of iron and coal consumed.

In conclusion, we repeat that no place in the country owes more than Cincinnati to her long lines of communication with the Interior; and as she extends these she will find her prosperity increase.

Railroads.

NORTHERN CROSS, AND CENTRAL MILITARY TRACT RAILROADS, OF ILLINOIS.

We have heretofore had very indefinite ideas of these roads, except as to their direction and termini. We are under obligations to W. H. Sidell, C. E., for the following particulars. He says:

The Northern Cross Railroad, begins at Quincy, on the Mississippi, and in a distance of 100 miles—first, 20 eastwardly, then northwardly 80 miles—reaches Galesburg.—From Galesburg the Military Tract Railroad runs northeastwardly 84 miles, to Mendota, on the Illinois Central road, 16 miles north of LaSalle. At Mendota begins the Aurora Railroad, which carries the line to Chicago. This latter road is 89 miles in length, though now using the Galena & Chicago Union track for the first 30 miles out of Chicago. Thus Quincy is, by this chain, 273 miles from Chicago.

The charter of the Northern Cross road gives the right to extend across the country, between the Mississippi and Illinois Rivers, from Quincy to Meredosia. In fact this was the original sole intention of the charter, and hence its name.

The extension of a branch to Galesburg, was a subsequent idea, and it was then considered of more immediate importance that the branch should be first completed. The distance from Quincy to Meredosia is 50 miles; the first 20 of which is common to both main line and branch; this portion has been partly graded and will be completed hereafter.

At Meredosia it meets the Great Western road, now constructed, opening a direct communication with Philadelphia and the East, as by our northern branch we are put in connection with the North, via Chicago. On the Missouri side of the Mississippi River, the Hannibal & St. Joseph railroad is constructing; and from Quincy to a point on that road—Palmyra—a distance of 10 miles, a road will doubtless be built, as the right to construct such has been obtained, which will open an extended far Western connection.

A charter for a bridge over the Mississippi river has been obtained. In an engineering sense this bridge is easily practicable.

The Northern Cross road was put under contract last winter, and is now in a state of considerable forwardness; over 2000 men and 1,300 horses and oxen are now at work. The grading of many of the sections, though not contiguous, is already completed. Track laying commenced at Quincy about the 1st inst., the necessary iron for 80 miles being on hand, and will proceed as rapidly as the grading on some of the heavier sections will permit.—There are but three bridges on the line, two less than 100, and the other less than 50 feet feet. The curves are few and easy and the maximum grade is 38 feet.

The surface of the country is not so easy for railroad construction as many imagine; the undulations are considerable, and the streams run in deep chasms, so that it requires some pretty heavy work to pass them, and heavier grades than people at a distance deem sufficient for prairies.

The country is one of boundless fertility and very healthy; indeed the "Military Bounty Tract," through which this road runs, has long been famous as the richest of the West, and therefore on this continent, and therefore in the world!

The estimated cost of the road is about $18,000 per mile, allowing $10,000 for iron alone.

The Northern Cross road passes through several thriving towns, which are thus described by an eye-witness:

Augusta is situated about thirty miles from Quincy and will present in its fine position, healty situation, and its facilities for education, great inducements to persons in the city desirous of sending their children abroad to be educated.

Macomb. This is a prairie city of 2000 inhabitants. Its houses are mainly one story frames, each in a yard of about one by two hundred feet, fronting principally on two streets, which cross the center, stretching for half a mile into the prairie.

Galesburg, the terminus, is a model city, about the size of Macomb, but founded on a system altogether different. One Mr. Gale was deputed by some New England farmers, to buy a large tract of land for them in Northern Illinois. He bought one here. The proprietors selected their farms, laid out the town, and sold their lots, but reserved one-tenth part of the unsold land for a college and schools.

The wilderness blossomed under their hand. The Peoria & Oquawka railroad took their town in route, and the Northern Cross Railroad has a made it a terminus. A glorious future looms before it. Its college fund has increased immensely, and it aims to contest the palm with Jacksonville itself in the matter of University attractions.

Well may we believe, then, that the Northern Cross railroad, having its termini at Quincy and Galesburg branching to Rock Island and Chicago, and having such towns as Augusta and Macomb on its line, cannot but be a successful line.

Our apologies are due to Mr. Sidell for not noticing his kind attentions earlier; but the temporary absence of the writer must be the excuse.

NORTHEAST & SOUTHWEST ALABAMA RAILROAD CONNECTIONS.

From our exchanges it appears that the subscriptions to the capital stock of this company are increasing rapidly; enough has already been obtained to grade and cross-tie the road from Chattanooga to Tuscaoolsa, except about 20 miles, of which 13 are in Jefferson and 7 in St. Clair counties.

The Cleveland and Chattanooga road, the northernmost link in this great chain, is about to pass into the hands of the East Tennessee & Georgia company; it has been located and will soon be put under contract. When completed it will form a direct commnnication between Knoxville and New Orleans, as well as be an important portion of the great through line from the Northeast. The following table shows the distance and the state of forwardness of the several lines composing the route:

WASHINGTON, D. C., TO NEW ORLEANS.

To Lynchburg.....		170 miles,	Complet'd & in prog.
To Va. line.....205	375	"	" " "
To Knoxville.....130	505	"	In progress.
To Cleveland..... 82	587	"	Nearly completed.
To Chattanooga.... 30	617	"	Provided for.
To N.E. & S.W.RR.270	887	"	Organiz'd & in prog.
To New Orleans....200	1087	"	Chartered and pro'd

The Cincinnati connection is also tolerably direct, as follows:

CINCINNATI TO NEW ORLEANS.

To Paris, Ky..... 75	75	miles.	Completed.
To Knoxville.....175	250	"	Organized.
To Cleveland..... 82	332	"	Nearly completed.
To N.Or. as above..300	632	"	

CINCINNATI, CUMBERLAND GAP & CHARLESTON RAILROAD.

This undertaking has been several times noticed in the Record, but the route has not heretofore been defined. The following, from Mr. Cocke, the President of the Company, will show its probable location. It is under the superintendence of R. L. Owens, Esq., as Engineer-in-Chief.

"Our road is called in the charter, *The Cincinnati, Cumberland Gap and Charleston Railroad*, and proposes to connect with the Kentucky Union Railroad at Cumberland Gap, at the point where the three states of Kentucky, Virginia and Tennessee join; thence across East Tennessee to "*Paint Rock*" on the French Broad river, where the North Carolina line intersects said river, passing through Tazewell, Bean's Station, and by the mouth of the Nolechuncky river, thence up the French Broad river to Paint Rock. From the Paint Rock it will run through Asheville, N. C., by the nearest route to Greenvillle, S. C., at which point we propose to connect with a road which now runs to Charleston, S. C."

Mississippi & Tennessee Railroad.—We learn that about 50 miles of this road is under contract, commencing at Memphis. The grading contract is to be finished by July, 1855. A strong and substantial company are negotiating for the whole contract from this place to Grenada, with a probability of success. This road when finished, will give Memphis between sixty and eighty thousand bags of cotton that are now shipped to New Orleans. Success to it and due credit to its officers and managers.—*Exchange.*

Railroad Earnings.

August, 1853--4.

EASTERN:

Name of Roads.	Miles.	1854.	1853.	Increase.	Per Cent.

Chicago & Rock Island,	181	97,641 00	44,482 88	53,158 12	54.4
Added since the above table was made up, viz:					
New York & Erie,	460	473,416 00	410,671 00	62,745 00	13.3
New York & Harlem,	150	90,009 53	87,776 41	2,233 12	2.4
Hamilton & Eaton,	38	8,068 79	6,064 18	2,004 61	24.8
Little Miami,	83	64,696 15*			
Cincinnati, Hamilton & Dayton,	60	41,378 64*			

* We are unable to give the Earnings of the Little Miami, and Cincinnati, Hamilton & Dayton roads for August 1853, but know them to be much more than this year. The decrease is readily accounted for in the low fares of the past and present seasons; a kind of friendly game to see which can lose money the faster.

Our Table of Monthly Earnings shows a steady increase in the business of railroads, though not to such an extent as some of our previous exhibits. This is readily accounted for by the excessive dullness in all kinds of busines, and the comparatively small amount of pleasure travel the past month. As our rivers rise, and fall business opens, we may with certainty expect a heavy business. In the mean time we have no cause of complaint on account of the present showing.

From this exhibit we deduce as follows:

8 Eastern roads, 1,927 miles, have increased over the same month last year, aggregate,. 75 8 pr.ct.
Or, per mile..... 0.39 "

10 Western roads, 1,456 miles, have increased in same time..... 28.29 pr.ct.
Or, per mile..... 19.04 "

From which we infer that Eastern roads generally, have already reached their limits, and that the Earnings will present a steady uniform rate of increase; while upon the Western roads the increase will continue to be large for a number of years to come, until the resources of this vast extent of country shall be fully developed, and who shall say when that will be? And what better answer is needed to the cry of "too many railroads" than a reference to the constantly increasing business of the roads already constructed?

ILLINOIS RAILROAD—PUBLIC LANDS.

Few persons fully appreciate the quantity of land that is contained in the grant in aid of the Illinois Railroad. The quantity is 2,600,000 acres. How much is two millions six hundred thousand acres? Neither more nor less than the dimensions of the whole state of Connecticut! As follows:

Official return of Connecticut, (acres).... 2,733,870
Lands patented to Illinois Central..... 2,572,060

A person or Company that should own the whole state of Connecticut in fee, free of debt, with all its rocks, rivers, swamps, bays, hills, dales and valleys, would be possessed of a good farm, notwithstanding that a very large proportion of it would be unremunerative, being unsusceptible of cultivation, and ineligible for occupation. The state of Connecticut contains 350,000 inhabitants, 60,378 dwellings, 547 miles of railroad, taxable valuation of $300,000,000.

This is what has grown upon a "patch" of land equal to the quantity owned by the Illinois railroad, but far beneath it in value.—The land owned by the road is all selected for its fertile qualities, and eligible location.—There is none of it waste or unprofitable.—There is no portion of it remote from railroad conveyance to the best markets North and South. It is all accessible to the most abundant supplies of bituminous coal—the whole quantity of coal in the whole Union is 133,000 miles, one-third of which is Illinois. The supply of timber by railroad from the North is limitless. Here are all the elements for the support of an immense population.—*Ex.*

SPRINGFIELD, MT. VERNON & PITTSBURG RAILROAD.—We learn that at a meeting of the directors of the above road, held at Springfield, on Friday last, Gen. Anthony handed in his resignation as President of the Company which was accepted; whereupon C. P. Buckingham, Esq., of this city, was elected President in his stead.

This selection, we feel confident, will give universal satisfaction, not only to the stockholders of the road but to the public generally. Mr. Buckingham's high character as a business man and as an honest an honorable citizen, will at once give credit and confidence to this important railroad, and will insure the early completion of the work suspended. We hope Mr. Buckingham will unhesitatingly accept the trust confided to his charge, and enter upon its duties as soon as possible with a fixed determination to push the work through without any unnecessary delay.—*Mt. Vernon Banner.*

NORTH MISSOURI RAILROAD.

The following particulars we gather from the St. Louis *Intelligencer*:

The North Missouri Railroad, starting in the city of St. Louis, is intended, running north, to pass through Iowa and ultimately to connect the city of St. Louis with that of St. Paul, or whatever town further north may spring into importance in the course of time, and the spread of emigration. What immediately concerns us, is to carry the road to the Iowa line, or first, to the line of the Hannibal and St. Joseph railroad which will intersect the northern portion of our state from east to west.

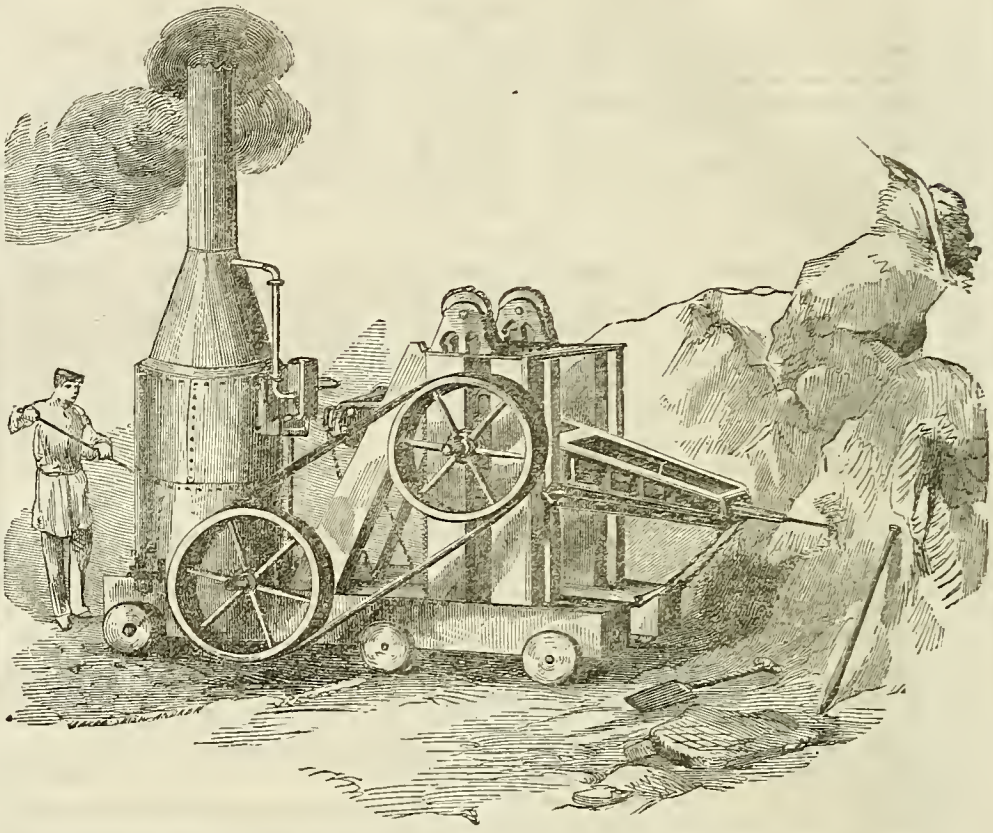
The estimated cost of the road from St. Louis to the Hannibal and St. Joseph railroad is seven million dollars, including every cost for locomotives, road, bed, and everything needed to make the road complete. It is evident then, that further help will be needed from the State and from other sources. One million more of state credit, and one million five hundred thousand more of subscriptions, would, it is supposed, so far complete the road to the Iowa State line, as to enable the Company to raise the means without trouble on the Company's bonds to do the balance of the work.

The road is under contract to be completed from here to St. Charles by 17th May, 1855, and in two and a half years, from 17th of last May, to the Hannibal and St. Joseph line of railroad. There are now over 300 men at work on the road from St. Louis to St. Charles, and in three weeks the contractors will be at work with a large force on the first forty miles beyond St. Charles, and it is expected the latter will be ready nearly as soon as that between St. Louis, and St. Charles. The people of St. Louis, and those interested in the matter, may, therefore, feel assured that they will, by the fall of 1855, be able to travel some forty miles beyond St. Charles by the North Missouri railroad, provided state and city and county bonds can be negotiated at anything like reasonable rates; and it is almost certain that city and county bonds must get better when capitalists look into the immense property owned by the city and county, and the comparative smallness of the debt of each. State bonds, will, undoubtedly keep good. All other counties beside St. Louis raise their subscriptions by taxation. They would be valueless otherwise to the company.—St. Louis city and county subsription, paid in bonds, are taken by contractors, as bsfore stated at par, so that it makes it as good as cash to the company.

Nothing is needed now, but the manifestation of a liberal spirit towards the road, to secure its speedy completion to the fullest extent. Its importance to St. Louis, and to the whole line of country through which it is to pass, it would be hard to over-rate. It runs, or is intended to run, and will run when completed, centrally along the ridge formed by the Mississippi and Missouri rivers, at a sufficient distance from either to secure it from all competition from them in the way of

trade. It runs through a rich country, whose unmeasured wealth, otherwise destined to be lost to us, it will at once develop, increase, and pour into our lap. The directory at least are not backward in this matter, they have given the subject that examination which has left upon their minds a profound conviction of the importance of the work to St Louis and the country along its route. They may be relied upon to do their part towards the consummation of this great enterprise, and will leave no stone unturned to hasten the events. Give them the sinews of war, and they will speedily prosecute the struggle to victory.

Those especially interested in the work,—and what man who makes the interests of this section of country his own, is not?—have great reason to congratulate themselves upon the happy auspices under which the work is being carried on. The management of the road has been such as must secure the approbation and confidence of all; the contractors, each in his locality, have pushed, and are pushing on the work with the greatest zeal. We commend it to the warm sympathies of our fellow-citizens and our farmers, especially to the north, as one of the enterprises with which their future prosperity is very intimately bound up.



COMPOSITION CASTINGS.

It has long been a desideratum in the adaptation of fine arts to the refined wants of daily life, as well as for purposes of science, that works of sculpture should be capable of being produced at a cheap rate. Many processes have been tried to render plaster solid; but none has hitherto proved in every respect successful, the requisite degree of transparency not having been obtained. Dr. Emil Braun has at length succeeded, we are told, in the production of a material adapted to plastic purposes, which affords the same sharpness of outlines as plaster of Paris, is scarcely inferior in whiteness to the finest statuary marble, and even surpasses it in impermeability of surface, being perfectly impervious to wet, and capable of resisting all inclemencies of weather.

The inventor has already exhibited several busts and statues of this composition, which have been viewed by the sculptors and artists of Rome, who are unanimous in their opinion as to the beauty and value of the material, the fracture of which even presents a crystallized structure. This material is as well adapted for the most delicate objects as for works of colossal size; the former exhibiting the utmost refinement of execution, whilst the latter proves that it is capable of resisting any degree of weight arising from the bulk of the objects themselves. In this material facsimiles of the most beautiful monuments of ancient or modern times, architectural ornaments, &c., may be reproduced at a price not greatly exceeding that of plaster casts. Thus not only houses and museums, but also gardens and parks, and all open court-yards or spaces destined for decorative purposes, may be adorned with the finest works of sculpture which the world affords.

☞ We learn from the Lebanon *Star*, that the work on the Cincinnati, Lebanon and Xenia Railroad, has been resumed. Messrs. De Graff & Co., assisted by Mr. Shannon Superintendent, broke ground vigorously at Lebanon, on Wednesday morning last.—*Dayton Empire.*

GARDNER'S ROCK DRILL.

At this time, when air-lines only are thought of among railroads, when rivers and mountains offer no permanent obstacle to the onward march of progress—when mines are being opened and worked under circumstances that in former days would have utterly dismayed capitalists, and allowed the mineral wealth of the earth to lie undisturbed in its hidden recesses rather than incur the necessarily heavy preliminary outlay—any practical invention for facilitating such progress cannot but be very acceptable to parties interested.

Among other decided improvements in the mechanical department of mining and tunneling operations, none can surpass "Gardner's Rock Drill," in efficiency and fitness for the purpose intended. By it a new era has been opened in mining and other excavations, by reducing the cost of operating to about one-tenth of former rates; and at the same time, changing the labor of years to months only. And it is destined to work an entire change in all kinds of earth and rock work, embracing excavations, boring or tunneling. By its use shafts or tunnels, heretofore requiring years of incessant labor, can now be completed in about as many months. As an evidence of its value, a silver medal (the highest premium) was awarded at the "World's Fair."

The machine, as described by the inventor, consists of a platform bearing a steam engine, with, at the other end, standards bearing a frame, by which the drill can be placed and worked horizontally, perpendicularly, or in any other direction. This frame bears two stout cross-heads and a mandril, which last bears the drill of any length or size desired. A simple and strong arrangement of an iron bar &c., underneath, causes the drill to turn faster or slower, as wished, as it strikes, and a similar arrangement effects the feeding forward of the drill rapidly or more slowly as in the judgment of the operator, the hard or soft character of the rock may seem to require.—The rate of advance of the drill can be varied instantaneously. The cross-heads and drill are thrown back by means of cams, thus compressing a stout cylindrical india rubber spring, the expansion of which gives an immensely powerful blow; and the machine clears itself of dust and debris without assistance.

The number of blows per minute is limited only by the durability of the *Steel Drill.*—On granite, 120 blows per minute is the working rate. These machines can be operated by hand, horse, or steam power. A three-horse power engine, operated by one man, will drive a machine capable of drilling anywhere from 3 to 7 inch holes, 4 feet deep per hour, in Quincy granite; and the same engine employed to operate the machine, will serve hoist the ore and rock. It takes up but small space, comparatively; two of these machines

only occenpying the space where eight men can work, thus making a difference, in the same space, of 92 mens' labor, each machine being equal to 50 men.

We regret that want of space prevents a more minute description of this valuable invention, and a comparison of its effects with those of the old hand-labor system ; but Mr. Gardner, Trinity Buildings, New York, will be very happy to explain everything appertaining to it, to those who desire it.

It is an invention which not only promises much, but actually performs much more than it promises. We therefore cheerfully commend it to the attention of Railroad Contractors, Miners and others in want of such a machine.

RECIPROCAL RIGHTS OF RAILROADS AND RIVERS—RAILROAD BRIDGE OVER THE MISSISSIPPI AT ROCK ISLAND.

We have made mention of this Bridge on several occasions in the RECORD, because we deemed the subject one of vital importance to the Railroad interests, and the point of controversy involved, as one affecting the rights of the community at large. We hold that railroads have rights as well as rivers—that rivers cannot be a bar to railroads any more than railroads can be a bar to rivers. But railroads possess decided advantages over rivers, inasmuch as they can be constructed over rivers so as to offer little or no impediment to navigation, and at the same time they can be built to penetrate the country in any and every direction, opening new avenues of trade and adding largely to the wealth of such sections, while rivers are confined to certain locations only, and, as has been the case with the Ohio and its tributaries for several seasons past, are not unfrequently useless for transportation purposes a large portion of the year.

Under these circumstances we cannot understand how it can be decided unlawful to construct any bridge, over any river, where it is so arranged as to offer no actual impediment to the free navigation thereof. We are aware that it is contended that this especial bridge does interfere with navigation ; we do not concede this as a fact, though it may perhaps make a little more care necessary, on the part of the pilot, in passing the draw ; yet even then not as much as crossing an ordinary sand-bar at low water. And if it did require some considerable care to pass it safely, have not railroads co-equal and co-existent rights with rivers ? And when they meet thus, should not the concessions be mutual ? If asked what concessions railroads make in crossing rivers, we reply, in the extra pains taken so to construct their bridges as to offer as little impediment to navigation as possible. Disinterested persons must coincide with us, we think, in our opinions, when they read the following description of the dimensions and plans of this bridge, for which we are indebted to the St. Louis *Intelligencer:*

The slough on the Illinois side of Rock Island is crossed by an embankment and bridge of three spans, each of 150 feet, resting upon their abutments and piers about 40 feet high.

The main channel will be crossed by a bridge of five spans, each 250 feet ; and two spans for the draw bridge, each 118 feet in the clear.

The *draw* is to rest upon a very large circular pier—surmounted by a turn-table of 36 feet in diameter, and will be worked by rack and pinions with such facility that the draw can be opened or closed by two men in one and a half minutes.

It is designed to keep the draw constantly opened during the season of navigation, except when the trains are crossing the bridge.

The total length of the bridge across the main channel between abutments, is 1,562 feet, (which is nearly equal to the width of the Mississippi river from the St. Louis shore to Bloody Island.)

There are two spans in the draw, *each* wide enough for *two* of the largest class upper Mississippi boats to pass abreast with safety.

Crib guards will be made extending up and down the river some 400 feet, for the protection of the pier, so that it is impossible for a boat to strike a pier unless done intentionally. The depth of the water in the channel at the present and lowest stage through the draw is ten feet.

Now, in the name of common sense, what impediment does such a bridge offer to navigation at that point ? None, and we are satisfied that all opposition to the bridge must arise from other causes than this.

We are glad to learn that the company are still going on with the bridge ; the abutments and piers on the Illinois side and in the main channel are completed ; a large force is employed on the main piers. On the occasion of baptising the first stone of the first pier, a large concourse of persons were present, and the stone was laid in its place amid the shouts of the assembly, after which a meeting was organized and several spirited resolutions were adopted.

There are several other railroad bridges projected over the Mississippi, and the Ohio rivers, upon the construction of which the ultimate decision of the Courts in this case will have an important bearing. The result is therefore anxiously looked for, and we cannot but feel assured that the decision will be in favor of the bridge.

Of the difficulty between the Bridge Company and the War Department, we have nothing to say, further than we think the action of the Secretary of War in this case, questionable ; but, then, this is only *our* opinion.

BELLEVILLE & ILLINOISTOWN RAILROAD.—We learn from the Missouri *Republican* of the 7th, that the work of laying the iron is rapidly progressing on this road. Only about three miles remain to be completed, and this will be done in a couple of weeks. Belleville will then be in half an hour's travel of St. Louis.

MADISON, INDIANAPOLIS & PERU RAILROAD.

It seems that the Indianapolis and Peru Railroad Company, becoming dissatisfied with the operations of the consolidated company, has sued out an injunction to prevent the consolidated company from further operating the Peru road. The injunction was granted by the Marion Circuit Court on the 4th inst.; the final hearing will take place next month.

The President of the consolidated company in his report, says:

"The disaffection spoken of has arisen from various causes ; in part from personal considerations, but more from a misapprehension of the true state and condition, business and business prospects, of the several portions of the consolidated road, and from the great depreciation of the stock of the consolidated company. So far, the Peru company has received all the benefits derived from the consolidation, the earnings of the Madison road being very nearly in the proportion of four to one, and not less than fifty thousand dollars of these earnings being expended for the exclusive benefit of the Peru road. For these expenditures and other liabilities, paid and assumed, the Peru Company is now indebted to the consolidated company more than one hundred thousand dollars, a sum exceeding the net earnings of the Peru road for a year to come.

At the period of the consolidation, the Peru road was not completed, and the consolidation was urged by the contractors, as their only resource to enable them to prosecute their work successfully, and without the credit thus given to their securities, it is believed the work must have been suspended. The last rails were not laid until about the first of April, and as the road then came into the hands of the company, it immediately required ballast, switches, side-tracks, water-tanks, station-houses, depots, machine-shops, turn-tables, and rolling machinery. These expenditures, and the large floating debt of the Peru Company, absorbed the earnings of the consolidated company, and added very materially to their embarrassment. Had the earnings of the Madison road for the first six months been applied to the liquidation of her floating debt, it would have made her condition comparatively easy, while the total net earnings of the Peru road for the same period would not have paid her semi-annual interest in July. These facts certainly could not have been known to those who desire to dissolve the consolidation.

The receipts for the first six months ending June 30th, were as follows:

ON MADISON ROAD.

For Freight and Passengers	$115,687 27
From other sources	30,133 77
Total	$145,821 04

ON PERU ROAD.

For Freight and Passengers	$28,057 98
From other sources	4,978 95
Total	$32,836 93

Making a total receipt on the entire road of $178,677 97, being $20,389 86 less than the receipts of the Madison road alone, for the corresponding period in 1853.

The expenditures for the same period have been as follows :

On Madison Road	$94,649 85
On Peru Road	82,299 80
Total	$176,949 65

The ordinary or current expenses for this period amounted to the sum of $114,986 41. This included the unusually large items of

$26,064 75, for repairs of road, and $10,035 10 for wood purchased in 1853.

The extraordinary expenses were $61,963 24.

COLUMBUS RAILROAD CONVENTION.

A convention of Railroad officers is about to assemble at Columbus, in this, state to consider the state of Railroad affairs at the West, and consult upon the best interest thereof.

In view of this convention, a correspondent of the Indianapolis *State Journal* suggests the following subjects for consideration .

1st. To unite the duties of President and Superintendent of trains, *in one person*, drawing but one salary.

2d. Let one person act as Superintendent of Tracks, with care of freight trains, and Chief Machinist.

3d. Dismiss all runners, outside agents, and pay no such expenses as *they* now incur.

4th. Reduce all salaries of the *cushion-chair* order to a reasonable amount.

5th. Prohibit any officer from giving any free passes, and let such things be done by the Boards in session only.

6th. Publish a monthly account of receipts and expenditures, including a full and honest statement of the *names* of all the *officers and employees*, and each one s salary or pay.

7th. Inquire whether Lawyers, and Doctors, and Politicians, *are* the best qualified persons for Presidents and Superintendents, or, whether the duties require any other qualifications, than mere legal, medical, or political skill ?

8th. Increase the price of freight and passage, until it will remunerate the stockholders.

9th. Obtain from the Legislature, proper laws to make the *watering of stock*, punishable by fine and imprisonment in the Penitentiary; and make it a penal offence, for any officer or Director of a Railroad Company, *to hold or vote a proxy*, at any election of the Company.

Some of these suggestions are worthy of serious thought, and would if adopted, add much to the profit and efficiency of railroads.

PENNSYLVANIA RAILROAD—NEW BONDS.—The Pennsylvania Railroad Company have just had engraved a new certificate of their full-paid stock, and have adopted certain forms in their issue which it is believed will very effectually guard against fraud. Each certificate requires four signatures, with at least three of whom there must be collusion if any false stock gets upon the market. The new certificates first pass through the hands of the Transfer Clerk, then the Register's, then those of the Treasurer, and lastly the President's, all of whose signatures, and the Company, each bears.

MAYSVILLE & LEXINGTON RAILROAD.—We are happy to learn from the Maysville *Eagle*, that there is a fair prospect that arrangements will be made ere long to resume the construction of this road. Energetic business men have taken hold of the matter and will carry it to completion if it be possible. The unsettled state of the financial market operates very much against the road ; but the prospects of success, says the *Eagle*, are very flattering.

TELEGRAPHS AND TELEGRAPHING.

A NEW IDEA.—The New York *Journal of Commerce* in speaking of the system of Telegraphs in England, says :

"There is also a system of remitting messages in progress of introduction, by means of which money paid in at any of the stations, is paid out at any other station required, and is expected to supercede the Government Order Office, which works through the slower medium of the Post Office."

This, though new, seems to us a good idea. The payment by the offices of telegraph drafts would be a matter of safety and convenience to all parties. In the first place it would be a proof against forgery. The deposit made in advance at one office, would insure against outside frauds, and the draft could be transmitted only through an instrument that can speak the truth. An instrument, moreover, that speaks to no one but the operators in the first instance. It would save the accidents and uncertainty of the mails. It would make remittances prompt to the moment. Money deposited in Albany would be practically transferred to New York in less than an hour. To business men this, we think, would be a great convenience, while it would be a source of profit to the Telegraph companies.

CENTRAL MILITARY TRACT RAILROAD.—A late number of the Chicago Democratic *Press*, says :

"We learn from A. T. Hall, Esq., who is connected with this road, that it will be finished to Princeton, twenty-two miles from Mendota, and the cars will commence running next week. By the 20th of the month it is to be finished thirteen miles further to French Grove, and by the first of October to Weathersfield, in Henry county, fifteen miles from Mendota. A few months more and we shall have another and continuous road to the Mississippi, at Burlington. The road runs thro' one of the finest portions of the state, and will add very much to the prosperity of Chicago."

Weathersfield is about thirty miles beyond Galesburg, which latter point we expect to reach from Burlington in the course of a few weeks. Should no untoward event occur, we shall be in connection with Chicago in from 60 to 90 days.—*Bennington Tel.*

IRON FOR THE MEMPHIS AND CHARLESTON RAILROAD.—We are pleased to learn, says the Memphis *Eagle*, that Mr. Tate, the energetic President of the Memphis & Charleston Railroad Company, has just closed a contract for twenty-five hundred tons of iron for the construction of the road east of La Grange. The iron is to be delivered at New Orleans on the first of December next. The terms of the contract are very favorable. The iron is purchased at $45 per ton, the payments to be made partly in cash, and partly in the bonds of the Company.

MARIETTA & CINCINNATI RAILROAD.—Noah L. Wilson, Esq., now in England on business of this Company has been elected President of the Company, in place of Mr. Cutler, who has been compelled to resign on account of his health. Until Mr. Wilson's return, Wm. S. Nye, Esq., of Marietta, will act as President.

NO MORE LANDS TO BE RESERVED FOR RAILROADS.—The following letter from the Secretary of the Interior, addressed to the Hon. Alfred Iverson, gives the conclusion to which the Department has come in reference to public lands reserved for railroads. We find it in the Columbus, Ga., *Times* of August 30 :

DEPARTMENT OF THE INTERIOR,
August 25, 1854.

Sir : In reply to yours of the 21st, requesting that the President will withdraw from sale or private entry the land within a belt of 12 miles on each side of the proposed Mobile & Girard Railroad, I have to state that the whole subject of the withdrawal of lands for railroad purposes has recently been fully examined and considered, and that it has been determined, with the approbation of the President, to bring into market with as little delay as practicable all lands heretofore withdrawn for such roads as have not been favorably acted upon by Congress, and to decline hereafter to withdraw lands for such purposes until after the grant shall have been actually made.

I am, sir, very respectfully, your obedient servant,
R. McCLELAND,
Secretary.

Hon. A. Iverson, Columbus, Ga.

GALVANIZED IRON.

The preservation of iron from oxidation or rust, for a series of years engaged the attention and taxed the ingenuity of practical and scientific minds, and a variety of processes had been suggested and tried without producing satisfactory results, as none were found to stand a test of time when exposed at the same time to the destructive influence of atmospheric changes. The researches of Sir Humphrey Davy, in 1824, at length threw a new light on this important subject, and the concurrent testimony of Brande and Faraday, of England, and Professors Morse and Henry, of our own country, backed by the acquired practical experience of thousands of consumers, have long since established the fact that iron prepared by what Davy termed the "galvanizing" process, is entitled to take precedence of all other metals, for the several uses to which it may be applied. The French Marine Commission have recommended its use in the French Navy, and J. W. P. Lewis, Esq., an accomplished engineer of Philadelphia, who speaks from actual observation, and careful notice of the results of several experiments made on galvanized iron, fully coincides in the views taken by Brande and others, that iron, when galvanized, is fully protected against rust, and we hope ere long to see it universally adopted in every section of the country.

GOLD IN VERMONT.—The Woodstock *Age* says that there is gold in Vermont ; and says that for the last three or four weeks, from thirty to fifty workmen, under the direction of Capt. Ira F. Payson, of N. Y., have been engaged in digging into and examining the premises of Bridgewater, where gold has been discovered, and that the result thus far, has been very satisfactory. The *Age* concludes by assuring the public that there is no humbug about this matter. and that the mines will prove among the richest in the country.

MONETARY.

From our advices we gather that Money has been rather abundant at the East during the past week, the banks generally discounting all their regular customers' offerings. Street rates about 10 @ 12 per cent. for number one mercantile paper.

Foreign Exchange reached 110 during the past week.

The prospect, so far as we can judge, is that money will be easier, and business good, though not so greatly expanded as last season.

The Stock Market, though somewhat fluctuating, has been quite as firm as could be expected under such a sudden rise as took place the week previous. Erie seems to be the standard for stocks in the New York market; as that stock is buoyant or depressed other stocks feel the effects. We note that the better class of securities were in demand; and that foreign orders, tempted by the exceeding low rates of the few previous weeks, had been quite large. From every indication we are inclined to believe that the future will be bright and cheering in the financial circles.

We translate De Coppet & Co's Weekly Foreign Circular, under date of 18th inst, which says:

"The advance in securities, noticed in ours of the 11th inst., has continued during the week with a regularity and constancy which would seem to assure a permanency which no previous rise has indicated. Home capitalists have entered the market with spirit. The demand from this source, in addition to the already active foreign demand, has occasioned a number of transactions—a large proportion for investment—principally in the shares of good dividend paying railroads, such as Galena & Chicago Union, at an advance of 5 per cent., Michigan Southern & Northern Indiana, 10 per cent., Michigan Central, and Cleveland & Toledo, 4 per cent., as well as the various obligations of Erie and Illinois Central at an advance of 4@7 per cent."

"State Stocks are an exception, and continue dull with limited sales. City Bonds, with one or two exceptions, are in demand and firm. Strictly speculative stocks have advanced, but are liable to frequent fluctuations. This amelioration of our market has been effected, notwithstanding the heavy shipments of specie to Europe; besides some $500,000 shipped from Boston."

The shipment of specie for the week is	$ 1,255,000
From Jan. 1, '54 to date	27,400,000
Same time, 1853	14,194,000
" " 1852	19,750,000

The sales during the past week have been as follows:

By A. H. Nicolay, Sept. 24, 1854—

1,000	" Shares Flushing Railroad	73	50

At the West we find that the last week has been one of considerable stringeney in the Money Market; and at the close of the week, the discount houses have refused nearly all the offerings, on account of *scarcity of currency*. The best names known on Third street, have been done as high as two and three per cent per month.

The action of our Bankers is driving Indiana Currency home for redemption, and we have nothing to replace it. The U. S. Custom House Office here, has, we understand. Some $100,000 in silver to disburse in exchange for gold, but this is but a drop in the bucket, the more especially as the present state of the currency makes gold worth a heavy premium. Our currency tinkers, when they made this law, had not the fear of the people before them; and indications are, that the people will not have the fear of the law before them in their business transactions, after the 1st proximo.

Eastern Exchange is low, ruling from ¼@1 per cent. premium, yet the supply is small.

The Stock Market presents every indication of buoyancy, though much checked in its operation by this unwarranted stringency in Money Matters. Nevertheless, several heavy transactions have taken place on Eastern account, for particulars we refer to our to quotations o Stock Sales of the week.

So soon as the Currency matters are settled, we think that business will be good, and transactions in Stock large

RAILROAD CONVENTION.—A convention of Presidents', Superintendents' and Directors of Western railroads met at Columbus last week. Twenty-six companies were represented.—The "free pass" system was discussed, and a resolution passed to abolish the entire system after the expiration of the current year; all trip passes to cease after November next.—Even the Presidents' of railroads can not pass free over any road but their own.

A regular tariff of prices was also adopted, tending gradually to raise the rates.

The proceedings were secret, and have not yet been officially promulgated. We may have more to say on the subject when we fully understand what was done.

METALLIC WEALTH OF THE UNITED STATES.

In the *Mining Journal* for August, we find an able article on the above, from which we extract the following relative to the gold-bearing belt of the Atlantic States:

"The Appalachian chain takes its origin in Canada, south-east of the St. Lawrence, and forms a broad belt of mountain ridges, extending in a southwesterly direction to Alabama. The entire length of the chain is about 1300 miles; its breadth is variable, gradually expanding towards its center, and contracting at each extremity. The most striking feature of this mountain system is the fact that it is made up of a series of parallel ridges, very numerous, especially in Pennsylvania and Virginia, no one of which can be considersd as being the main or central chain to which the others are subordinate, but the whole forming a system of flexures which gradually open out from the southeast to the northwest, as has been made evident from the results of the geological surveys of Pennsylvania and Virginia, under the direction of Professors H. D. and W. B. Rogers. Along the southeastern edge of this great Appalachian system is a relatively narrow, undulating range, known under different names in different states. In Vermont it is called the Green Mountains; in New York, the Highlands; in Pennsylvania, the South Mountains; in Virginia, the Blue Ridge; in North Carolina, the Smoky Mountains. The rocks of this belt, which has a width of ten or fifteen miles, are of the lower palæozoic age, but highly metamorphosed, and for the most part, having their organic remains entirely obliterated. Still farther to the southeast lies the great auriferous belt, nearly parallel with the Blue Ridge, and not easily separated from it in geological age, either lithologically or by palæontological characters. The central axis of this belt has a direction in Virginia of about north 32° east; towards the north it assumes a more nearly north and south direction, and to the south it approaches an east and west line. Its width, where most developed, does not exceed seventy miles. This is about its extent on the borders of North and South Carolina. In Virginia it does not exceed fifteen miles. Starting from Georgia, and proceeding northward we find it developed in the following counties: in Georgia, in Carroll, Cobb, Cherokee, Lumpkin, and Habersham counties; in South Carolina, through the whole northwestern corner of the state, especially in the following districts: Abbeville, Pickens, Spartanburg, Union, York, Lancaster; in North Carolina, in Mecklenburg, Rutherford, Cabarrus, Rowan, Davidson, Guildford, and Rockingham; thence through Virginia, in Pittsylvania, Orange, Culpepper, Fauquier; in Maryland, Montgomery county. Beyond Maryland, to the north, the indications become fainter, and consist only in a few scattered lumps or fine scales occasionally picked up, until we reach Canada, where there is a considerable extent proved to be auriferous."

HARTFORD AND PROVIDENCE RAILROAD.—The first locomotive passed over this road from Hartford to Providence on the 12th inst.

NOTICE TO CONTRACTORS.

Mobile and Girard Railroad.

SEALED PROPOSALS will be received by the undersigned at this office, until the first day of December, for the Clearing, Graduation, Track-Laying, together with the building of all Bridges and Culverts of the Western Division of the Mobile and Girard Railroad, extending from Mobile to Greenvile, covering a distance of 130 miles.

The work will generally be divided into one mile sections, and bids may be made for one or more of these sections. Separate proposals are desired for the Track-laying, building of Bridges and Culverts, likewise for the building of the Trestle-work, 5¼ miles in length, across the Tensas and Mobile Rivers, with the intervening swamps. The trestle-work will be 12 feet high, built upon Black Cypress Piles, found in abundance and adjacent to the line; the two rivers will be crossed with the common Pile Bridging with Truss Pivot Draw in the center of each.

Specifications with the form of the contract and proposals can be had of the undersigned upon application.

Plans, profiles and estimates of that portion of the line are now ready for examination. Parties proposing will please designate it as such upon the envelope.

The country is healthy, with no swamps after leaving the Tensas River. From Mobile to the river, 18.5 miles the grading is light and country very healthy at all seasons of the year. After the line leaves the Tensas River, it passes through, and on the ridge that divides the Alabama and Conecuh waters, easy of access by the Alabama River, and through a section of country well stocked with provisions.

Payments will be made one-third (⅓) in current funds, one-third in the capital stock of the Company, bearing (.08) per cent. interest payable in stock, until the road is completed, then to cease and become common stock of the road, and relying upon the earnings of the same for dividends; the balance (⅓) one-third to be paid in the (.08) per cent. convertible bonds of the Company, maturing in (5) or more years, at the option of the contractors, coupons payable semi-annually either in Columbus, Ga., Mobile, Ala., or at New York, at the option of the holder.

To bidders personally unknown to the undersigned, bond and approved security will be required to an amount not exceeding (¼) the amount of the contract, for the timely and faithful completion of the same.

22½ miles of the road from Girard west, will be open for business the first of November, and 52 miles 9 months therefrom; it is the intention to have the entire line of 245 miles open for business early in 1858.

Sept. 28, 1854-9t. GEO. S. RUNEY.

Shortest Route to Indianapolis, Chicago, and St. Louis by Indianapolis & Cincinnati Railroad,

VIA LAWRENCEBURG,

IN connection with the **OHIO & MISSISSIPPI RAILROAD.** Passenger Trains leave Cincinnati at 7:15 A. M., and 3:15 P. M. Arrive at Indianapolis at 11.30 A. M., and 8:30 P. M.

By morning train passengers arrive at Chicago in 14 hours, and at St. Louis in 28 hours.

Freight shipped to Indianapolis and all other points West and North without delay at cheapest rates.

Cars run from Lawrenceburgh to Terre Haute, Lafayette, Peru and Chicago, without unloading.

Office, foot of Main street corner of Water street.

SIDNEY RICE,
Cincinnati, Sept. 28, 1854. Agent.

NOTICE TO CONTRACTORS.

Terra Haute and Alton Railroad.

SEALED PROPOSALS will be received at the Engineer's Office in Shelbyville, Shelby Co., Illinois, until Wednesday, Sep. 27, inst. at sundown, for the graduation, masonry, trestle work and ties, on the Terra Haute and Alton Railroad, from the Chicago Branch to the main trunk of the Illinois Central Railroad, being about 50 miles.

Plans and specifications of the Eastern Division can be seen at the Engineer's Office at Terra Haute, Indiana, and of the middle Division at the Engineer's Office in Hillsboro.

A large portion of this work is very heavy and offers great inducements for Contractors to give it their attention. Payments in cash mostly.

New Works on Civil Engineering.

THE Field Practice of Laying out Circular Curves for Railroads. By John C. Trautwine, Civil Engineer.—4th Thousand, in pocket-book form with tucks.

—ALSO—

A New Method of Calculating the Cubic Contents of Excavations and Embankments, by the aid of Tables and 10 Engraved Plates of Diagrams. By John C. Trautwine, C. E.; 2d edition.

Price, one dollar each. Postage on the Curves, five cents; on the Excavations and Embankments, eight cents. For sale by WILLIAM HAMILTON.

Hall of the Franklin Institute.
Sept. 21-3* Philadelphia, Pa.

CHARLES FRODSHAM'S

IMPROVED WATCHES.

BEGGS & SMITH, JEWELERS,

NO. 6 WEST FOURTH STREET,
(*Adjoining the First Presbyterian Church.*)

CINCINNATI, O.

HAVE received from Mr. Simon Willard, Boston, Agent for the United States, the sole and exclusive agency for the sale of **CHARLES FRODSHAM'S** NEW SERIES OF IMPROVED CHRONOMETER WATCHES, in the states of Ohio, Indiana, Illinois, Michigan, Iowa, Wisconsin, Missouri, Kentucky and Tennessee.

In the Watches of the New Series, Mr. FRODSHAM has succeeded by a more perfect method of compensation, a more correct adjustment in isochronism, and an entirely new and peculiar construction of the train, by which more power is obtained without increase of size, in producing timekeepers of wonderful and unrivalled accuracy. The great importance of the improved watches is a perfect regularity of time under every variety of climate, motion and position. So perfect are the adjustments, that the most violent exercise, such as horseback riding, jumping, etc., produces on them no sensible effect They are therefore, particularly adapted to Railroad purposes.

These watches having been subjected to the severest tests for the past three years, and having proved themselves perfect in all the essentials of correct timekeeping, are recommended with confidence to those in search of good watches, as the best article ever introduced into the American Market.

Liberty is given to refer to the following gentlemen, who, among many others, have proved the excellence of Charles Frodsham's Watches as timekeepers:

Gen. John S. Tyler	.....	Massachusetts.
John E. Thayer, Esq.	.....	"
Enoch Train,	"	"
E. C. Bates,	"	"
F. W. Thayer,	"	"
Wm. Whiting,	"	"
Geo. M. Thacher,	"	"
David Dyer,	"	"
Alvin Adams,	"	"
Billings Briggs,	"	"
David Weld,	"	"
Hon. Ebenezer Lane,	.....	Sandusky.
E. F. Osborne, Esq.	.....	Ohio.

The Prices of the New Series Gold Cases, are According to Size, viz:

SIZE 12	.....	
" 14	.....	$230
" 16	.....	
" 18	.....	250
" 20	.....	275
" 22	.....	300

Recommendations:

Boston, Sept. 3, 1853.

The Compensated Lever Watch I purchased of you, made by Charles Frodsham, London, No. 7200, has varied but thirty seconds from mean time in six months, by actual daily comparison with your regulator.

Yours, &c., ALVIN ADAMS.

Mr. Simon Willard.

Boston, Feb. 4, 1854.

Mr. S. Willard Dear Sir—The Frodsham watch, No. 7557, I purchased of you last October, has performed wonderfully well. I have compared it almost daily by your Astronomical clock, and its variations for ninety days is but one second, or a loss of but one-hundredth of a second per day. I consider it better than any Marine Chronometer I ever used.

Yours truly,
FISHER A. NEWELL,
Late master of Sch., Honolulu.

Sandusky, Ohio. Jan. 1, 1854.

Mr. S. Willard, Dear Sir—More than six months ago I purchased of you two of Frodsham's best watches—up to this time, one of them, No. 7571, has altered from mean time but twenty-seven seconds, and the other, No. 7517, but twenty-three seconds in the same period.

Yours, respectfully,
E. F. OSBORNE.

To Mr. Simon Willard.

Gentlemen—On the 1st of April last I procured from Mr Willard, of Boston, one of Frodsham's improved series of watches. It was regulated and set to Cincinnati time. It has not, in that period, been suffered to run down, nor have the hands been moved, and to day it is 20 seconds only slow. Respectfully yours,

HENRY O. AMES,
Sup,t Cin. Ham. & Dayton Railroad.
August 18, 1854.

To Messrs. Beggs & Smith.

The following is an extract from a letter of William Brown, Esq., Springfield, Ohio, engineer on the M. R. & L. E. R. R., who has personally kept the rate of several of Frodsham's watches.

"Finally from what I have known of Frodsham's watches, I am very strongly impressed with the idea, that they are a decided improvement on all other timekeepers, and were they set in gimballs and used with the same care, I think their performance would equal that of Mr. Frodsham's celebrated box chronometer, and would answer the same purpose for determining longitudes."

Sept. 21-6*

Notice of Copartnership.

MR. PETER MARIE. heretofore of the firm of De-coppet & Co., has this day formed a copartnership with Mr. Rudolph Kanz, (for many years with the banking house of Messrs. L. Von Hoffmon & Co.,) under the firm of MARIE & KANZ, at 27 William street. Their attention will be devoted to the purchase and sale on commission of Stocks, Bonds and Foreign Exchanges, and to the negotiation of business paper.

New York, Sept. 1, 1854. [sept. 7-1*

DENNEY'S DIVIDED CAR AXLE.

PATENTED JANUARY 31ST, 1854.

THE ATTENTION OF RAILROAD COMPANIES is respectfully invited to an examination of the merits of this valuable invention, which offers to add largely to the safety of life and property.

The valuable features of this arrangement of axle are, a saving of full fifty per cent. in motive power on crooked roads: the rails are protected from being destroyed by the flanges of the wheels coming in contact with them on the curves, as is the case with the stiff or rigid axle, which not only destroys the rail but puts a constant strain upon the wheel and axle, causing the wheel on the inner rail to trip or revolve upon the rail under the weight of the car and its load, while the opposite wheel is traversing its greater distance; the tendency of which, is to wear the wheel flat, and cause it, or the axle, to break sooner or later. There is less danger of the car leaving the track from its having become spread.

Axles fitted in this way do not require to be near so large, and yet contain more strength than the common axle, for the reason that the liberty given to the wheels, which allows them to accommodate themselves to the curvatures of the road, removes wholly the strain thrown upon the ordinary axle; and therefore, it requires no more strength of iron at any point between the wheels, than is contained in the bearings, which in the ordinary axle, is not more than one-third of the strength of the other portions of the axle.

The elongated bearing which forms the connection is so proportioned as not to wedge or become tight in the alloy, the wear being almost imperceptible, requiring to be set up not oftener than once in twelve months, by a slight tightning of the screw nuts. If, from long service, the alloy becomes worn out, it can be refilled, making it as perfect as when first filled up, and the gauge of the wheels will never become changed so as to injure the running of the car.

It is after a series of the most careful experiments, conducted through a period of time sufficient to test in the most satisfactory manner, the real merits of divided car axles, and a thorough and practical test in real service of over two years, that we now offer to Railroad Companies one that we are assured will give universal satisfaction in its operations, and both simple and cheap in its construction.

We are now ready to dispose of rights to use the above axle on the following terms: We guarantee full and perfect satisfaction by giving ample time to thoroughly test its merits, and will require no payment to be made until such satisfaction has been given. All applications to be made to

SAMUEL L. DENNEY,

Pipe and Manhole Rings, all sizes;

Square or Rope Packing, do.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agen of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and possessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.

2d, They are a great deal cheaper.

3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations. This is a new and important invention. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the COLDEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils, -10 casks, assorted weights now in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Leland's Superior C. S. Car and Auger Bitts.—All sizes.

Brass Kettles, and Sheet Brass, &c.—Brass Kettles, assorted from 6 to 30; Sheet Brass assorted from No. 0 to 30; Brass Wire, do do do.

Star Breast Chains.—Four casks of those superior double-linked Chains, just received.

Walker's Trace Chains.—70 casks of those superior goods, warranted full length and sizes, 8 to 20 links, straight and twisted, now in store.

American Anvils.—Eagle brand, faced with with cast steel, and warranted by the manufacturers equal to Armitage's Mousehole.

Plated Spoons.—Plain, tipped, and threaded heavy plate, on best quality of German Silver.

Premium Gimlet Screws.—10,000 gross just received.

Mill Saws. Hoe & Co.'s C. S. Wm. Rowland's, and W. H. Rowland's 6, 6½, 7, 7½, and 8 ft

Cross Cut Saws.—Hoe & Co.'s C. S., Jno ockerell's C. S. and G. S., Wm. Rowland's and W. & H. Rowland's 5, 5½, 6, 6½, 7, 7½, and 8 feet Also, 4 and 4½ feet Tennon Saws.

Axes—1000 doz. Axes, assorted Yankee and Kentucky patterns, first, second, and third quality

Nails.—4000 kegs Shoenberger's and Wheeling Nails, now in store.

Railroad Line.

Cincinnati, Hamilton & Dayton Railroad.

Summer Arrangement.

COMMENCING WEDNESDAY, JUNE 20th, 1854. TRAINS will run by standard time, which is seven minutes faster than that of Cincinnati.

First Train

At 6 o'clock, A. M., Lightning Express for Dayton, Crestline, Pittsburgh, Philadelphia and Baltimore.

Second Train

At 6.10 A. M.. for Hamilton, Richmond, Indianapolis, Terre Haute, Lafayette and Chicago, direct.

Third Train

At 8.20 A. M., for Dayton, Sandusky, Toledo, Detroit, Chicago, Cleveland, Buffalo, New York, Boston, Pittsburgh, Philadelphia, Baltimore and Washington.

Fourth Train

At 2 P. M. for Dayton, Greenville and Union.

Fifth Train

At 3.30 P. M., for Hamilton, Richmond, Indianapolis, Terre Haute, Lafayette and Chicago.

Sixth Train

At 5 P. M., for Dayton, Troy and Piqua, and intermediate stations.

Seventh Train

At 6.30 P. M., for Hamilton and intermediate stations.

The 1st Train, Express,

Will stop only at Hamilton and Middletown.

2d, 3d, 4th, 5th and 6th Trains,

Will stop at all regular stations.

The Seventh Train

Will stop at all way and flag stations.

The 1st Train

Will connect at Crestline at 12.30 P. M., with the Ohio & Pennsylvania Train for Pittsburgh, Philadelphia, Baltimore, etc., forming a direct and continuous line for each of these cities. Cars run through to Crestline without change. Baggage checked to Pittshugh.

2d Train

Will connect at Richmond at 9.05 A. M., with Train of Indiana Central Road for Indianapolis; arrive at that place at 12 M., thence to Terro Haute, Lafayette, or Chicago without detention. Time as short as by any other route.

3d Train

Will connect at Dayton at 10.45 A. M., with Mad River Train, and arrive at Sandusky at 4 P. M., and go immediately on board the splendid steamers **St. Lawrence** and **Mississippi**, to Buffalo; thence at 7.30 A. M., with Buffalo and N. Y. City Road, to New York; arriving at that place at 10 P. M., also at Crestline 4.20 P. M., with Ohio and Penna. Train for Pittsburgh, Philadelphia, Baltimore and Washington.

The Same Train

Will also connect at Clyde with Cleveland and Toledo Train to Toledo. Chicago and intermediate points; and at Sandusky at 5 P. M., with steamer **Bay City**, for Detroit. Also, with Dayton and Michigan Railroad to Troy and Piqua, and at Piqua with Doyle & Co's Canal Packet Line to all points on Wabash and Miami Canals.

Fourth Train

Will connect at Dayton with Dayton and Greenville Railroad to Greenville, Union, and all points on Bellefontaine and Indianapolis Railroad.

Fifth Train

Will connect at Richmond at 6.40 P. M., with Indiana Central Train for Indianapolis, Terre Haute, Lafayette.

Passengers will bear in mind that the following rates of fare, via Lake Steamers, include both Meals and Staterooms, and that the fare to Philadelphia and Baltimore is One Dollar cheaper, and one less change of cars than by the Columbus route.

E. W. WOODWARD,
Engineer and Superintendent.

☞ The Omnibus Line will call for and deliver passengers to and from the trains to any part of the City.

J. HOWELL, Conductor.

☞ The Company will not be responsible for baggage exceeding $50 in value, unless the same be returned to the Conductor or Agent, and freight paid at the rate of a passage for every $500 in value above that amount.

je. 29

Covington and Lexington Railroad.

OPEN to Cynthiana, 56 miles. Two Daily Passenger Trains.

On and after Thursday, May 25th, and until further notice, Trains will run as follows:

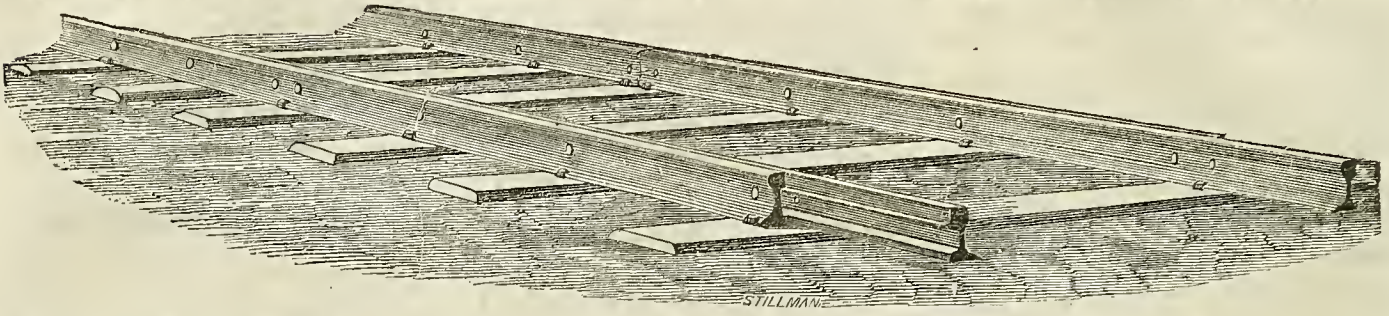
Express Train leaves Covington at 8 o'clock, A. M. stopping at Benton, Demossville, Butler, Falmouth, Callenville, Boyd's, Berry's, Robinson's and Garnett's only, and arriving at Cynthiana at 11.50 A. M. Returning, leave Cynthiana, at 1.30 P. M., stopping at the above stations, and arriving at Covington at 5.30 P. M.

Passengers for Paris and Lexington, by taking the above train, will take dinner at Cynthiana, and by Messrs. Thurston and Thompson's line of Omnibusses, will reach Paris at 4 o'clock, P. M. The Evening Train of the Maysville and Lexington Road, leaves Paris at 5 o'clock, P. M., enabling passengers by this route to reach Lexington at 6 o'clock, P. M. Returning, leave Lexington by the 7 A. M. Train of the Maysville and Lexington Road for Paris, leave Paris by Messrs Thurston & Thompson's line of Omnibusses at 8.30 A. M. arriving at Cynthiana in time for dinner, and connect with the train for Covington at 1.30, P. M., arriving at Covington at 5.30 P. M.

Accommodation Train leaves Cynthiana at 6 o'clock A. M., stopping at all regular and flag stations upon the road, and arriving at Covington at 10.10 A. M. Returning, leave Covington at 3.15 P. M., stopping as above, and arrive at Cynthiana at 7.40 P. M.

Passengers by this train can leave home in the morning, pass five hours in Covington or Cincinnati, and return home before dark.

The Express Train will stop only at the stations named. Passengers for other points must take the Accommodation train.



Freight trains, for the present, will leave Covington Mondays, Wednesdays and Fridays; leave Cynthiana Tuesdays, Thursdays and Saturdays.

Freight will be received at Covington and Cynthiana up to 4 o'clock P. M., for the train of the following morning.

J. M. DOUGHERTY,
Superintendent.

ja. 20.

WINSLOW'S
PATENT COMPOUND RAIL.

THIS RAIL, which is represented by the above, has now been in use on several Roads for upwards of three years; during which time it has become established among Railroad Managers as realizing the advantages of a

THEORETICALLY PERFECT RAIL.

Its advantages over the common form of "T" Rail are—a saving in the wear and tear of Machinery—it saves, to a great extent, in the repairs of track—it secures a high rate of speed with the same power, and what is certainly of equal importance, complete protection against some of the accidents to which roads are liable Being practically a continuous Rail for the entire length of the road, without break at the ends of bars, the jarring motion communicated thereby in passing over the common "T" Rail is avoided, as is also its effects upon Cars and Machinery. The comfort of travelers must of course be greatly increased.

This Rail is now manufactured at Hanging Rock Iron Works, upon the Ohio River, and at Mt. Savage Iron Works, Maryland. Specimens of the Rail and pattern of the same will be gladly shown, as well as information in relation thereto, given by applicatiou to

A. S. WINSLOW, Nos. 9 & 11 West Second Street, bet. Main and Walnut Sts., CINCINNATI.

KENTUCKY LOCOMOTIVE WORKS.
CORNER OF KENTUCKY AND TENTH STS.
LOUISVILLE, KY.

THE Proprietors of the Kentucky Locomotive Works would respectfully inform Railroad Companies and the public generally that, having completed their establishment, they are now prepared to receive and execute orders with fidelity and dispatch.

They will contract for

Locomotives, Passenger, Baggage, Freight, Gravel and Hand Cars,

Of every style and pattern, as well as all kinds of St and Machinery required for railroads.

Particular attention will be paid to repairing, which they have every facility.

They are also prepared to contract on favorable terms for building all kinds of Machine Tools, such as Turning Engines, Lathes, Planers, Drills, Slotting, Spliting, and Shaping Machines, of every variety of pattern.

Having also a large FOUNDRY connected with the establishment, orders for Castings are solicited, and will be filled with promptness.

Car Wheels of any pattern can be furnished on short notice. Double and single plate and Spoke Wheels of all sizes constantly on hand.

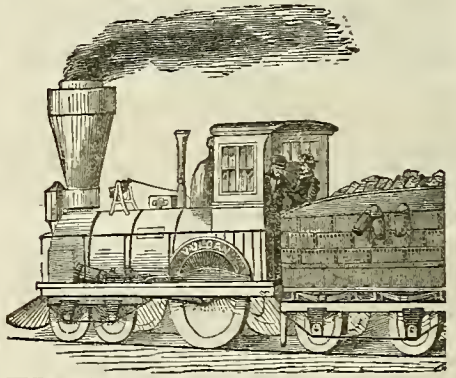
☞ Communications or orders must be addressed to
OLMSTED, TENNYS & PECK,
jo.8-tf Louisville, Ky.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Reservoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.



The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad meo in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.

WILLIAM SHERBURNE,

DESCRIPTION OF PLAN.

Fig. 1, of the above cut, represents the foundations, consisting of *Bank* and *Track Walls*, the latter made of cut, the former of hammer-dressed stone, with cut stone coping. The Track is bent of the ordinary T rail, spiked and leaded to the stone track walls. The Center Pier is made of cut stone, with a step for screw and pivot bolted to the same.

Fig. 2, shows the framing.

Fig. 3, is a side view of Main Truss, with the mode of gearing, including the mitre-wheels, iron crank frame, rack and pinion, foundations, pivot wheels and pedestals.

Fig. 4, gives a perspective view of rim, segments, decking, etc.

Fig. 5, is an end view of the main trucks, with pedestals and wheels.

Fig. 6, is a screw for pivot, 6 inches in diameter, working in a steel step through a nut for adjustment.

Fig. 7, shows a cross section of track wall, well, and pedestal.

†m124] 9 and 11 West Second St. Cincinnati.

"GARDNER'S ROCK DRILL."

DESIGNED for Mining, Tunneling, Quarrying Use, and Rock Excavations of all descriptions, by the use of which a saving of 50 to 75 per cent. is made. This drill can be operated by hand, horse, or steam power, and works equally as well horizontally or at any angle, as perpendicularly.

A silver medal, the highest prize, was awarded these Machines at the World's Fair.

Applications for Territorial Rights and Machines must be made to the Patentee.

G. ARTHUR GARDNER,
Trinity Building, N. York.

REMOVAL.

The Office of the RAILROAD RECORD has been removed to No. **106** West Fourth St., north side, between Vine and Race streets, in the building occupied by the Cincinnati & Cleveland Short Line, the Cincinnati, Lebanon and Xenia, and the Cincinnati & Dayton Short Line Railroad Companies.

The location is in the very center of Railroad business, and but few steps from the Burnet House. Full files of railroad reports, maps, newspapers and other documents can always be found at this office, and it will always afford us great pleasure to give any information, and answer any queries on railroad matters, when in our power. We cordially invite railroad men from the country, when visiting our city, to honor us with a call and avail themselves of the facilities of our office.

☞ **Orders for all kinds of Railroad Printing received and promptly attended to at the Office, No. 106 West Fourth Street.**

COLUMBUS RAILROAD CONVENTION AGAIN.—We find the following in the Sandusky City *Register*. What does it mean ?

A telegraph in our yesterday morning's paper, about the results of the deliberations of the railroad Superintendent's Convention, is, we learn, rather premature :—therefore, the Cincinnati papers have "scented" too soon. Nothing decisive was accomplished at that Convention. Southern and Western roads were not represented. All the talking was by two or three "gassy" men. The Convention broke up in discontent, Friday noon : and, after dinner, many Superintendents took their quiet leave—rather disgusted with what had occurred.

It is understood that the Convention adjourned to meet at Dayton on the 25th of October ; but it is more than probable that that appointment will end in a smoke. An assemblage of a half dozen Presidents and Superintendents of our largest and most interested roads would effect more innovation and reform than forty of these general Conventions of Superintendents.

THE OHIO & MISSISSIPPI RAILROAD.

The peculiar position of this road places it on a level with the New York & Erie, the Pennsylvania Central and the Baltimore & Ohio railroads, with the difference, that its cost is much less, and its receipts will in the end be greater. If the New York & Erie, or the Baltimore & Ohio, can make 6 per cent. dividends, the Ohio & Mississippi can make 15 per cent. This may seem extravagant, but the slightest investigation of their relative cost, position, graduation and termini, will demonstrate our statement beyond the possibility of cavil. As the Ohio & Mississippi is the most important work in the Valley of the Ohio, and as the cities of Cincinnati and St. Louis have invested largely in its capital and credit, it may be useful to make some comparisons between this truly *central* work and the three largest railroads in the Atlantic states.

1. As to POSITION. We shall here compare the lengths, *relative to a straight line*, the *termini*, and the *geography* of position :

Roads	Length	Straight Line	Termini	Geography
N. Y. & E..	460	320	Dunkirk.	Dividing Ridges of the Hudson, Delaware, Susquehanna & Allegheny.
Balt. & O...	380	240	Wheeling.	Allegheny Mountains.
Pa. Cental..	353	270	Pittsburg.	Allegheny Mountains.
O. & Miss...	340	320	St. Louis.	Valley of the Ohio.

This comparison shows the following facts: *first*, that the *losses* in distance are respectively as follows, viz: New York & Erie, 30 per cent.; Pennsylvania Central, 24 per cent.; Baltimore & Ohio, 37 per cent.; Ohio & Mississippi, 6 per cent. Thus the distance from New York to Erie, and that from Cincinnati to St. Louis are on an *air-line*, precisely the same, while the *loss* on the New York & Erie is 140 miles, and that on the Ohio & Mississippi only 20 miles ! The New York & Erie has to construct *one hundred and twenty miles* of difficult and expensive railway more than the Ohio & Mississippi, to *attain the same distance*. The disproportion on the Baltimore road is even greater. The *effect* of this is to make the Atlantic roads not only cost vastly more, but to increase *in a constant ratio*, the expense of transportation to attain the same result ; and this expense of transportation is increased relatively on local as well as through traffic, for there is a loss of 30 miles in each 100 of the Erie railway.

Secondly, The three great Atlantic roads traverse a succession of mountains, which, in addition to the expense of construction, make a permanent addition to the expense of transportation, by a *succession of high grades*.—Thus the Erie railroad has grades of 80 and 90 feet ; the Pennsylvania Central, grades of 90 feet, and the Baltimore & Ohio grades of 116 feet. The Ohio & Mississippi has some short grades of 50 feet ; but on the whole, its grades are small compared with the Atlantic roads.

Thirdly, the importance of the Western *terminus* of the Ohio & Mississippi, is far beyond that of either of the others. St. Louis, on the Mississippi, is to be at least the third or fourth city of the United States. New York and Cincinnati, and perhaps Philadelphia, will exceed it ; but it will certainly run beyond Boston, Baltimore and New Orleans. Besides this, St. Louis being near the mouth of the Missouri, is, and always will remain, the great gate-way to the West.

A glance at the above comparative view, shows that the Pennsylvania railroad has a great advantage over the other Atlantic highways, in regard to the prospect of profits ; but that neither of them bear any comparison to that of the Ohio & Mississippi, which, in its position and construction, far exceeds them. But, that this may be more evident, we proceed to another mode of comparison, viz—

2. COST AND DEBTS.

Roads.	Cost of Construction.	Cost per mile.	Funded Debt.
N. Y. & Erie....	$34,003,865	$75,000	$24,003,865
Balt. & Ohio.....	22,254,338	60,000	6,000,000
Pa. Central.....	18,200,000	52,000	5,000,000
Ohio & Miss.....	12,000,000	35,000	5,750,000

In the above statement it is assumed that the Columbia railroad is a part of the Pennsylvania Central ; and that the Ohio & Mississippi is finished and stocked complete.—Now this statement shows that if these roads paid precisely the same *net profits* per mile—then assuming the dividend of the Erie, at 6 per cent. *as a standard*—the results would be in fact—

New York & Erie	6 per cent.
Baltimore & Ohio	7½ "
Pennsylvania Central	8½ "
Ohio & Mississippi	12½ "

Taking 7 per cent. dividends as giving a *par* value to stocks, and we have the following intrinsic values of these stocks:

New York & Erie, shares	85½
Baltimore & Ohio	107
Pennsylvania Central	121½
Ohio & Mississippi	178½

This is on the supposition that these works do make the *same profits per mile*. But we hazard nothing in saying that the profits of the Ohio & Mississippi railroad, *per mile*, must be greater by far than either of the other works. The reasons for this are too obvious to require an elaboration ——(!). The fertility of the country is greater ; the position of the road by far better, and the competition much less. In fact, there is, and can be no real competition to the Ohio & Mississippi railroad. No road will be constructed in the same direction, and in the same district of country for at least twenty years.

3. THE BEGINNING OF BUSINESS.

The Ohio & Mississippi railroad is now opened between Cincinnati and Jeffersonville, a distance of 136 miles; and although it is only four months since the first train of cars went to Aurora, yet the result is a surprise to the most sanguine friends of the work. The road has now 5,000 passengers per week—equal to 250,000 per annum ! There is now no question that the Ohio & Mississippi railroad will transport at least 300,000 passen-

gers between Cincinnati and Seymour, (87 miles) in the first twelve months of it operations. Nothing like this has ever been done in the first year, and on such a distance by any road in the West, where railways have done the best. The freight business has commenced under auspices equally cheerful, and we hazard nothing in saying that the traffic of the Ohio & Mississippi railroad will equal the highest estimates made.

Before another year will have gone, it will be fully completed, and will vindicate to the world not only its own experiments, but the superiority of the whole system of Western railways, over everything the world has yet exhibited. The recent panic (from which many are just coming to their senses,) will in two or three years, be remembered only as an evidence of the weakness and delusion to which even the shrewdest of money dealers are subject.

VERMONT CENTRAL RAILROAD.

The meeting of the Vermont Central railroad company was not very large. William Raymond Lee, Esq., was chosen President.—The amount of Crane's illegal issue is 10,000 shares, and the directors refer the subject to the stockholders without any recommendation. In regard to the surrender of the property by the Trustees, they think it cannot be judiciously done at the present time. The Trustees report the track to be in a very bad condition, and assign this as the principal reason for the great increase of expenses. Twenty-five thousand tons of iron are now required to insure safety and economy in working the road. The Trustees will not pay second mortgage interest on stock dividends, however ample their means, until a legal decision is given authorizing them to do so; and they will withhold all interest, if necessary to maintain the road in serviceable condition. The directors report the Earnings of the road for the year, to be $820,119 60. Expenses $605,-386 48, of which $83,161 is set down as extraordinary expenditures. The total liabilities are $3,697,293; assets, 239,322 13; liabilities over assets, $3,457,872 02. The funded debt is $3,338,700; floating debt, $3,-697,293.

The resolution providing for the assumption of the over-issued stock was presented; a stock vote on it resulted in its adoption by a vote of 37,653 yeas to 1,141 nays. The vote for directors was nearly unanimous for the following gentlemen:

J. C. Howe, Wm. Thomas, C. O. Whitmore, Geo. Dexter, Onslow Stearns, B. P. Cheney, and E. P. Walton, Jr. The meeting then dissolved.

CHANGE OF FARE.—On and after Monday the 2d inst., the fare hence to Indianapolis was raised to $3,50; to Terre Haute $5,50; to Lafayette $5,50.

THE COAL FIELDS OF OHIO, AND COAL CONSUMPTION OF ITS CITIES.

We have several times touched on this subject, with a view to exhibit the economical value of coal; the prodigious resources of Ohio in this mineral; and its future development. The development of coal is the result of high civilization; and hence coal mines are not thoroughly worked, till a country begins to have large towns, and is well advanced in the arts. This is now the case with Ohio, and accordingly capitalists, manufactures, artizans and citizens, are all beginning to turn their attention to the supply of coal. Some ten or a dozen coal companies have been formed within two years in Ohio, for working mines in the northeast part of the state. The production of coal has doubled in the same time; and the consumption would increase at a more rapid rate if there was a sufficient supply.

As this is a subject of great interest to railways, as well as the public generally, it may be well to examine the *causes of demand*, the *sources of supply* and the probable *development of the coal region*.

1. THE CAUSES OF DEMAND. Of course, while wood was the cheaper fuel, coal was very little in demand, except for some sorts of iron work—for which it is absolutely necessary. But this has ceased to be the case.—Wood, on the rivers, canals and railways is becoming rapidly exhausted, and at the large towns is therefore, proportionally high. At Cincinnati, where fuel of every kind is highest, the ratio of expense in burning wood and coal is about *two to one*. In other words, coal at 25 cents a bushel is cheaper than wood at $5 per cord. But with proper care, coal may be laid in the cellar at 12½ cents per bushel. In the interior of the state, we are told, coal at 20 cents is deemed cheaper than wood at $3. But at Chillicothe, Columbus, Circleville, and many other interior towns, coal can be had at 8 cents, and in these towns the consumption is increasing rapidly. In domestic consumption of fuel, we may assume that in a short time coal will be used in all the considerable towns of the state.

Another and equally important source of demand are the factories, work-shops and blacksmiths. There are now *twenty* great establishments that will consume five millions of bushels; *fifty* smaller ones that will consume an equal amount; while the furnaces forges, and blacksmiths consume as much a all the others. This consumption must amount in all to twenty millions; although, it will be observed, that nearly half of it is used in the coal mines by furnaces, forges, etc.

Another important demand is caused by MILLS. Twenty years since, it would have been deemed a positive absurdity to say that coal would be used to move mills, when there was water power present! But now the thing is reversed. It costs more to builds and keep a dam in repair, than it does to run a steam mill. The consequence is that we find steam mills all over the state, beside streams that formerly furnished the power.—In this the railways have greatly assisted; for to a flour mill, *locality* is of importance.—Hence, steam mills are now erected near the railway depots, where the carriage and handling of the wheat, flour and coal are all convenient. In a few years it will require at least ten millions of bushels of coal to supply the steam mills on the railways, and this amount must all be carried on the roads.

2. THE SOURCES OF SUPPLY. Ohio is estimated to contain a coal field equal in extent to *twelve thousand square miles*, or one-third the surface of the state. The eastern and southern boundary of the Ohio coal fields, is the Ohio River; the western commences some ten miles above Portsmouth, and runs on a line a little east of north to the western line of Summit county. Within this limit are some counties, such as Fairfield, in which coal has not yet been found. It is nevertheless quite certain that coal underlies them, and probably at no great depth. The counties which at present produce most coal, are Meigs, Athens, Muskingum, Summit, Jackson, Jefferson, Trumbull, Tuscarawas, Belmont, Guernsey, Lawrence, Stark, Hocking, and Vinton. Besides these, coal is found in Gallia, Washington, Cosbocton, Licking, Morgan and Carroll. The present amount of coal *dug*, including that consumed on the spot, is estimated at the following amount:

Counties.	Bushels.
Meigs	8,000,000
Athens	1,500,000
Summit	4,000,000
Stark	1,000,000
Tuacarawas	500,000
Muskingum	2,000,000
Lawrence	2,000,000
Jackson	1,000,000
Vinton	300,000
Coshocton	300 000
Jefferson	1,000,000
Belmont	1,000,000
Licking	200,000
Trumbull	500,000
Washington	200,000
Monroe	200,000
Morgan	100,000
Aggregate	23,800,000

The above is probably an under estimate, and certainly will be for the future, in which the demand and supply will probably be doubled in the next two or three years.

The following is the amount of coal *arrived*, as near as we can ascertain, in the chief towns of Ohio:

Towns.	Bushels.
Cincinnati	8,000,000
Cleveland	6,000,000
Columbus	1,000,000
Chillicothe	300,000
Circleville	200,000
Dayton	120,000

Other towns consume enough to make in all twenty millions of bushels. The town population of Ohio will, in half a dozen years, amount to half a million, and this will require fifteen millions for household consumption; while the foundries, factories, and shops of

all descriptions will require twenty-five millions, independent of furnaces and forges.—This brings us to the third topic, viz:

3. The Development of Ohio Coal Mines. We see that independent of the coal consumed at the mines by furnaces, forges and other works, *forty millions* of bushels will be required in the towns, and will require transportation one half by railway which will make *eight hundred thousand tons*, in addition to what the railways now have. But this amount will be increased annually at a rapid rate; for, when a state has arrived at a point in which its lands are mostly occupied, the arts and manufactures grow immensely, and that is the position of Ohio now. Her agriculture has grown beyond that of any state in the Union; and fortunately for her prosperity, the mineral region lies just where it can be fed to most advantage by her surplus food; and where the fortunate union of iron, coal, salt and stone makes manufacturing most profitable. We may expect to see large and prosperous manufacturing towns arise through out the coal districts, which in turn will create new business for the several lines of transportation. Indeed the United States has as yet seen little of manufacturing industry, compared with what we may expect to see arise in the southeastern portion of Ohio.

A Railroad Train Attached for Debt.—Recently, just as the train of the Merrimac and Connecticut railroad, with the mails and about twenty passengers, was about to leave Manchester, N. H., it was suddenly stopped by the Sheriff laying an attachment upon the engine and cars, to recover $3,000 due to the Eastern railroad. The company owes some $50,000, and it is said all the property of the road has been attachsd.

Railroad Tickets not Property.—Judge Robinson, of Rochester, N. Y., has decided in the case of the State versus Andrew Donnelly, on a charge of larceny, for stealing sixty Central railroad tickets, that such tickets, not in the hands of *bona fide* purchasers, were of no intrinsic value, and hence not the subject of larceny.

Eaton & Hamilton Railroad.—The Earnings of this line for seven months of the fiscal year, 1854, compared with 1853, same time, are as follows:

	1853.	1854.
February	$6,826 47	$11,624 14
March	6,055 36	10,721 02
April	5,097 56	7,932 93
May	6,541 76	8,075 66
June	6,035 85	7,461 64
July	4,[illegible]9 21	6,188 54
August	6,064 18	8,068 79
	$41,710 39	$60,073 02
		41,710 39
Increase, 44 per cent		$18,362 53

Time Keepers.—For good watches, see Beggs & Smith's advertisement.

Railroads.

Hartford & New Haven Railroad.—At the annual meeting of the Hartford and New Haven railroad company, held at Hartford, the following statement of the receipts and expenditures for the year was read:

From Passengers		$176,174 38
" Freight		243,643 02
" Mails, expresses, rents, etc		37,834 51
		$757,651 91
Repairing road and bridges	$81,765 20	
Wood, coal, and oil	76,273 66	
Materials and labors on engine and cars	44,892 45	
General expenses, including taxes, insurances, etc	54,687 08	
Salaries, labor and transportation expenses	93,675 67	
Lost and damaged goods, gratuities, etc	4,539 12	
Station repairs	9,589 16	
Engines and cars paid for	16,337 52	
Interest on bonds, etc	52,444 66	
		$451,204 52
Net receipts		$306,487 09

The President, Mr. Charles F. Pond, having declined to receive compensation for his services the past year, a committee was appointed to procure a service of plate, and present to Mr. Pond, in behalf of the company, in acknowledgment of his faithful and efficient services.

The old board of directors was re-elected. At a subsequent meeting of Charles F. Pond was re-elected president, and Horatio Fitch Secretary and Treasurer.

Memphis & Charleston Railroad.—The following table, compiled from the books of the Treasurer, shows the receipts of the above road during the three dullest months of the year—June, July and August, and establishes the fact that it is already a paying concern, with only fifty miles in operation.

June	$7,211 05
July	7,788 45
August	7,985 42
Total	$22,985 79

The above does not include the amount charged for mail service, for which the company have no contract with the Post Office Department.

The following table shows the receipts and expenditures of this road for the year ending August 31, 1854. Perhaps few other roads in the Union of the same completed length, could be able to exhibit so satisfactory a balance sheet:

Receipts for Passengers	$76,379 35
" " Freight	83,729 72
" " Mails	2,780 00
Total Earnings	$162,789 07
Expenses for the 12 months	77,900 45
Net Earnings for 12 months	$84,889 62

Lacon & Platte Valley Air-line Railroad.—The Fort Wayne *Sentinel*, says the Directors of this road feel sanguine that ere long they will be able to make a vigorous commencement of the work of construction.

A joint meeting of the several boards of directors will shortly be held at Lacon, Illinois, to take into consideration the prospects of the road, and devise measures for its early construction.

CENTRAL OHIO RAILROAD.

SIXTH ANNUAL REPORT.

We give herewith as much of this interesting report as we can find place for in our columns. From it we learn that by the middle of the present month another direct and unbroken communication will be had with the East over a route, which, when it becomes known to travelers, as it is, as one of the most magnificent in the way of natural scenery, will be a strong competitor for passenger travel with any and all other routes. The report says:

It is a matter of pride with the Directory, and it should be a matter of congratulation with the stockholders, that notwithstanding the excessive—and to railroad corporations—the *unprecedented* stringency of the money market, for the whole of the past year, the full opening of the Central Ohio railroad from Columbus to the Ohio river, is on the eve of accomplishment. *Within thirty days*, we trust, that trains will be run in systematic connection with the lines east and west; * * * and when it is understood that the interesting event to which we point will occur without a single failure or protest of the company's obligations, and without sacrifices or exactions upon the stockholders, we feel that no judgment in relation to our labors, made up from an imperfect knowledge of the facts, should be permitted to disturb our own satisfaction, or prevent the tender of congratulations to our stockholders. * * * *

The statement of the Auditor accompanying this report, gives the financial condition of the company. It will be seen by reference to it, that up to the first of the present month the whole expenditures for construction account have been $3,922,234 68; for machinery, $299,178 87, and for real estate account, $49,036 21; making an aggregate of $3,270,449 66. To this, making up the gross expenditures, may be added, office furniture, materials in workshops and fuel, $16,742 91.

As the work upon the graduation of the road to the river is now reduced to some 10 or 12 sections, and as all but two of those will be complete by the 15th of next month, any important addition to the construction account, within the coming year, will not be required. The amount, as will doubtless be observed, has already gone much beyond the original estimates; but when it is understood that *five-sixths* of the work of preparation for the *second track* between Zanesville and the Ohio river, is already done—that since the estimates were made, a very important change of line was authorized, and that the cost of labor and materials has advanced about 30 per cent.; and when especially is considered the impossibility, even approximately, of determining how much rock instead of earth, underlies the surface in the range of our work, it furnishes much satisfaction to know that the cost per mile, even with what is done for double track, will be but little more than that of other single track roads in Eastern Ohio, and will be much below the average cost of roads of similar class, in the Middle and Eastern states.

CONTRACTS WITH OTHER ROADS.

As you are doubtless aware that the Columbus, Piqua and Indiana railroad was being built with a gauge of 4 feet 8½ inches.—This gauge being 1½ inches narrower than the ordinary Ohio gauge, which is 4 feet 10

nches, * * the directors of that company proposed the adoption of the Ohio gauge, and a contract for running arrangements in connection with our road, provided we would endorse $150,000 of their mortgage bonds. * * * The object in obtaining the endorsement, was to give an additional market value to the bonds of the company, so as to admit of sales during the present pressure, and thereby enable them to complete their road. As the proposition was to open to us an unrestricted intercourse with the rich district traversed by the Columbus, Piqua & Indiana road, we could not feel justified in rejecting the proposition, and accordingly made the desired endorsement. We respectfully ask your ratification of the transaction.

The Steubenville and Indiana railroad company have applied for an arrangement, by which, trade and travel for or from their road may be transported over ours, between Newark and Columbus. The board have authorized the response in general terms, that all which can be reasonably asked shall be conceded, and have empowered the President to make a contract on terms similar to the one had with the Columbus and Xenia company. Our directory believe that railroad corporations, wisely administered, are beneficent and powerful agents of the state, in the development of physical wealth—in the diffusion of intelligence, through the ease of intercommunication which they establish between remote and dissimilar districts, by equalizing conditions, and by the dispersion of prejudices, assimilating populations, and enlarging the circle of kindly interchanges. As such public agents, they have no right to interpose obstacles to the largest liberty of commerce. Entertaining such views, and believing that our constituency are also impressed with them, we trust such arrangements will be made with the Steubenville and Indiana company as shall be made entirely satisfactory to them; and such as shall forever do away with the necessity of building a competing road between Newark and Columbus. The contingency of the extension of their road to the latter city, would not only be a practical waste of three-fourths of a million of dollars of the capital of the country, but could accomplish nothing but injury to both companies.

In our last annual report, we adverted to the importance of making a contract with the Cleveland and Pittsburg railroad compauy, on terms similar to those of the contract with the Columbus and Xenia company, which, if accomplished, and upon the completion of the former road, would permit the running of our trains, *under our own schedule*, over their line to the city of Pittsburg, where a direct connection could be had with the Pennsylvania Central road leading to Philadelphia, with the Connellsville road leading to Baltimore, and with the Allegheny Valley road leading to the cities of Central New York. We have the pleasure of advising you that a contract of the kind desired, was made in October last. By this contract we agree to meet the Cleveland and Pittsburg road at Kirkwood, opposite the city of Wheeling, and within a few rods of the western bridge leading to that city. Our location previously established to section 80, near West Wheeling, was extended without delay to the grounds provided by the other company, and by the terms of the agreement, our road is to be placed in working position with that point, by the time the other company shall have built down to it. The pressure of the times has compelled a partial suspension of their work, but the junction of the two roads may reasonably be expected within the coming summer.

EASTERN TERMINUS.

As notwithstanding a very careful and explicit statement of the character of our connections at the Ohio river, made in our last annual report, some misconception upon the subject seems still to prevail, it is but just to ourselves again to advert to it.

Although the city of Wheeling declined making her subscription of $250,000, except in the first instance, on terms which no other party had stipulated for, and which would have involved an extra expenditure greater than the whole amount of her proposed subscription, and afterwards upon the condition of a partial cession of our chartered powers, we persevered in the determination to make the eastern terminus of our road at that city, or as near to it as we could reach. * * *

At no period had we entertained favorably the idea of a dependence upon drays and carriages for the transmission of our freight and passengers across Zane's Island and the two bridges; for that plan involved, not only a prospective tax upon the traffic of our road, which would have seriously interfered with its profits (in the case of freights, probably amounting to *one-fourth* of the whole charge from Columbus to Wheeling) but a heavy tax upon the patience of passengers, and so far militating against the popularity of the route. Increased confidence in our credit and resources induced a conclusion in favor of a railroad bridge across the Ohio as the most perfect plan of connection; and we accordingly proposed the extension of our line directly into the heart of the city of Wheeling, at a point admitting of equally favorable interchanges with both the Baltimore and Ohio, and the Hempfield roads. As this plan was accompanied with the condition that the bridge should be as high as the Suspension Bridge at that city, and therefore by the argument of the friends of that graceful structure, no impediment to navigation; and as we were willing to have conditions annexed which should prohibit, so far as the proposed project could be made available, any except live stock transfers outside of the city, we were certainly surprised at the reception of advice from proper authority, accompanying the draft of a law which we had sent for their approbation that the City Council could not feel at liberty to co-operate with us in the obtainment of the necessary legislation. Not yet discouraged by these continued repulses, the President visited Richmond whilst the Legislature was in session, with the hope, that if co-operation could not be obtained, there would at least be no opposition. This hope was short lived.—After the patient labor of nearly a year to bring about a different state of things, and when definite action in relation to the river connection became imperative, the board now absolved from all obligations of comity, felt itself compelled to provide for the interests of the company irrespective—but not reckless—of the interests of a city whose policy in relation to our road, was incomprehensible, except upon grounds which we were reluctant to assume. Accordingly the contract which we have named, with the Cleveland and Pittsburgh railroad company, for connection at Kirkwood opposite Wheeling, and also a contract with the Baltimore and Ohio company, by which they agree to receive and deliver our trade and travel at Benwood, four miles below Wheeling, have been made. Both of these contracts, it is alleged, promise injury to that city—the first by the transmission of traffic between our road and Philadelphia, without crossing the Ohio short of Pittsburg, and a second by a crossing of the river calculated to build up a rival interest. This may be, but if so, they will be incidents of a policy to which Wheeling herself has constrained us. It cannot be alleged that in making these arrrangements, we have violated any rule of comity, or that we have failed in duty to our company. By our line to Kirkwood, we are in position to avail ourselves of the *Wheeling and Belmont bridges, of the local trade of the city, and of every facility for connection with the Hempfield road, which has ever been indicated even by those who complain of our action in the case.*

By the crossing at Bellair, we make a saving of 8 miles of transit between Baltimore and the points west of the Ohio to which our road gives access, that will accomplish an economy of time and money for both our trade and travel, which must prove an attractive feature, and exercise the happiest influence upon the trade of the road. In aiming to appreciate fairly the value of the saving of distance obtained by the crossing at Bellair, we must look upon the two roads approaching each other from opposite sides of the river as *one line*, for such it is, practically, so far as the interest of the freight forwarder, and the convenience of the traveling public are concerned. * * * *

Whatever influence then, upon the prosperity of Wheeling may be produced by our arrangements at and near the eastern terminus of our road, it cannot be alleged with any propriety, that they evidence neglect, and much less an abuse of our trust.

So far as a bridge connection with the Hempfield road is concerned, we have no hesitation in saying, that if the company having the road in charge, should prefer such connection to be across Zane's Island, and a feasible plan, at a reasonable expense, can be suggsuggested, this company should meet the proposition with favor, and bear its due proportion of the burden.

PLAN OF CONNECTION WITH THE BALTIMORE AND OHIO ROAD.

Our plan of connection with the Baltimore and Ohio road, notwithstanding the intervention of the river, contemplates the disuse of all such taxation, (drayage, storage, etc.,) and also to travel, the annoyance of porterages and carriage transfers.

The crossing of the Ohio will be accomplished by double tracked inclined planes correspondent to each other upon the east and west sides of the river, upon which planes, movable platforms with tracks to match the tracks upon the grade, just as the stage of water may require, following the rise or fall upon the river. Against these platforms a capacious and powerful steamer, carrying an entire passenger train, or half a freight train, will abut, and over the bow receive or discharge its load, having tracks running longitudinally and correspondent to the tracks of the platform. A locomotive working in the yard, upon either side of the river, will move the trains to and from the boat.

It is assumed that this arrangement will admit of the interchange of passenger trains, probably including even a meal, in 30 minutes, and make each trip with the freight cars in fifteen minutes; and at an expense much less than the ordinary transfers between different stations in the same cities.

For the transportation of freight and passengers between the temporary terminus at Bellair and the city of Wheeling, until the

line shall be extended to Kirkwood, the Baltimore and Ohio company have kindly proffered to furnish special trains for that service at whatever hour our schedule might require. It is safe to assume that both roads will furnish every facility for intercommunication with the city of Wheeling. Her population of 20,000 souls and her extensive manufactures of iron, glass, &c., furnish a traffic which neither road could afford to neglect. For the directors. J. H. SULLIVAN,

Aug. 29th, 1854. President.

We make the following extracts from the Superintendent's Report:

THE EARNINGS:

The unfinished state of the road precludes any other than a mere local business, but taking that circumstance into consideration, the business for the past twelve months affords a just ground of congratulation when taken as an earnest of what may be expected upon completion to the Ohio River.

Until April 28th, the number of miles in operation was 58½, since that time 84 miles have been worked, making an average for the entire year of say 65 miles.

We have transported during the year 110,646 passengers, from whom we have received, - - - - - - - - - - $99,064 98½

For 34,721 tons freight, - - 45,221 14

" Mail Service, - - - - - 11,967 60

" Express, - - - - - - 1,165 76½

Total Earnings, 12 months ending July 31st, 1854, *$157,419 49

*The above amount differs from amount given in Auditor's report, in the sum of $10,436 9-100, being the earnings of July, 1853, which month is not included in my report.

THE ROAD BED.

The Western Division of the road between Zanesville and Columbus, is in excellent order, and has been worked during the past year without the slightest accident to the passenger or freight trains.

The track east of Zanesville has been in my charge since the first of last month, during which time the unballasted portion has been placed in fair order by dressing up the worst points, and the ballasting has progressed from the 8th to the 14th mile.

MOTIVE POWER.

The company own at present 18 Locomotives, six of which have lately been purchased of Messrs. Bradley & Whittemore, contractors for building the road. These, with the addition of 12 first class passenger, and 12 first class freight engines, now under contract, will increase the motive power of the company to 42 engines, which it is thought will be sufficient to meet the increased business of the coming year.

The contracts out will make the stock of passenger, baggage and mail cars, by the opening of the road as follows:

26 first class cars.
9 second " "
12 baggage and mail cars.

The new passenger cars now being delivered are of a style and finish unsurpassed upon any road in the Union, and are equally wide and convenient as those now running upon the broad gauge roads of New York.

The number of freight cars now under contract, will increase our stock of freight cars, within a few months, to the following:

Of eight wheel box cars				256
" " "	Stock and coal cars			261
" " "	Platform	"		160
" " "	Gravel	"		24
" four "	"	"		61
" " "	Hopper	"		51
" " "	Platform	"		8
Total				821

This will give us a rolling stock sufficient to do all the business that will probably seek our line within the first year, and will be a larger amount of stock than is owned by any Western road of the same length.

The "coal and cattle cars," above mentioned, are calculated to load either coal, cattle, hogs or lumber, with expedition; and I have the satisfaction of reporting that upon trial, they have answered our expectations fully.

The importance of a description of car that would accommodate our greatest articles of transport going east and west, will be recognised at once when it is understood that coal cars and cattle cars, generally, are returned empty, carrying cattle eastward, and coal and lumber westward; these cars will have paying loads at all times, and thus enable us to carry at figures which would not otherwise pay.

MADISON INDIANAPOLIS & PERU RAILROAD.

In the last issue of the RECORD, page 521, we gave some few items relative to this company, since then we have recieved a copy of the first semi annual report of the company, from which we make the following additional extracts:

The business since the consolidation does not appear to have been very remunerative, upon either the Peru, the Columbus & Shelbyville, or the main portions of the line, while the steamboat operation was a great loss to the company.

The roads composing the line seem to be in need of repairs to a heavy amount, including quite an amount of rails, it is suggested that the rails on the Columbus branch be taken up, as the receipts upon that portion do not meet the expenses, and used where needed upon the line elsewhere, thus saving an additional outlay of some $200,000. The report closes as follows:

PROSPECTIVE BUSINESS, REPAIRS, &c.—The prospective business of the road is subject to so many contingencis as to render it extremely difficult to form an accurate estimate.—Throughout the line, however, it has its peculiar local business, which no competition can interfere with, and which must gradually and certainly increase with the growth and improvement of the country. The stone and lime at the south, and the lumber at the North are comparatively inexhaustible, and will furnish a constant and reliable business, while with the improvement of the country, the agricultural products seeking an outlet over the road, will add year by year to its receipts. The travel on the northern portion of the road is increasing rapidly, and the Southern part will always competc successfully for its portion of the river traffic, and the through transportation to and from Cincinnati and Louisville.

The July dividend was passed, the earnings having been exepended as heretofore stated; and this policy will be steadily adhered to as long as there are repairs to make, or debts to liquidate. It will be impossible to anticipate when dividends will be paid to the stockholders, if the road is left to its own earnings to extricate itself from debt—certainly not within the year to come.

The repairs needed on the Madion end of the road, consist in the relaying of several miles of track, with the iron now on hand, relaying the plane and re-constructing the bridge at Madison, and re-building several smaller bridges, at a total expense of perhaps $60,000.

On the Peru road, from defect of plan and workmanship nearly all the bridges, except the Wabash, will require re-building at an expenditure probably of $25,000. The company holds the contractors responsible for these defects, but may or may not recover the amount. Ten miles of the road require ballasting, at an expense say of $8,000. The 22 miles of flat bar between Indianapolis and Noblesville, are becoming unsafe, and insufficient for the business of the road, and will require to be relaid with the T rail at as early a day as practicable, at an expense of about $200,000; depot buildings at Noblesville, Tipton, Kokomo, Miamitown, and Peru, say $8,000 making a total of repairs required on the Peru road of $241,000. Some of these expenditures may for a while be delayed, but all are needed. Should the iron for this relaying be taken from the Columbus and Shelby road, it will enable the work to be done without incurring additional liabilities. But this, of course, will not be attempted until the question of consolidation is settled.

The road should also be securely fenced its entire length, and a line of telegraph be erected from Peru to Indianapolis.

Several important changes in the management of the road have occurred within the half year just elapsed. In February, John Brough, Esq., for many years ably and reputably connected with the Madison road, resigned the Presidency, and the undersigned was selected to fill the vacancy. Soon after J. R. Cravens, Esq., who had discharged his duties with entire satisfaction resigned the position of Vice President and Superintendent, and was succeeded by Philo Hurd, Esq., of Connecticut. During my connection with Mr. Hurd I found him an able, intelligent, and energetic man of business, untiringly devoted to the interests of the road, and possessed of unimpeachable integrity.

Business calling him again to Connecticut, he has been succeeded by Mr. J. O. D. Lilly, an eminent practical mechanic and engineer, as Superintendent.

W. N. Jackson, Esq., for many years the popular and efficient Secretary of the M. and I. Company, has been elected Vice President, and will devote himself to the service of the Company. As far as praticable a rigid system of economy has been adopted, and the expenditures reduced to the lowest possible rate. Respectfully submitted,

E. W. H. ELLIS,
President.

☞ The President of the Black River and Utica railroad has given notice to the stockholders that as there appears to be serious if not insurmountable objections to a union between that company and the Rome, Clayton and Ogdensburgh railroad, negotiations on the subject have been discontinued. It is now the intention of the Board to press forward in their original undertaking.

BUFFALO AND NEW YORK CITY RAILROAD.

The affairs of this company appear to be in a sad state. A committee has been appointed in New York City to examine into its situation. The committee reports, in substance, as follows:

That on the 20th of May last, two days after the committee had notified the board of directors of the Buffalo and New York City railroad company of their intention to visit Buffalo, and four days before their arrival in that place, a lease of the road to Mr. A. D. Patchin, the president of the company, was executed, by which Mr. Patchin receives, out of the first earnings of the road, 10 per cent. on its gross receipts—a sum which, as near as the committee can estimate, must amount to about $20,000 or $25,000 per annum. The lease is made for one year, with the right on the part of Mr. Patchin to renew it for three years, if he sees fit.

The committee calls the lease an "extraordinary instrument." They briefly recapitulate these results of their investigations, as disclosed by this and their former report:

First—The first mortgage, and the rights and interests of the bondholders, have been entirely disregarded in at least one very important particular. The very essential clause contained in that mortgage, by which the rolling stock is pledged to secure the first loan, has been treated as a nullity by the board itself; without any conference with the trustees or bondholders, it has been assumed by the directors that this clause is wholly inoperative, and the rolling stock has been mortgaged by the company itself, by a chattel mortgage to other parties.

Second—The president of the company, who, by virtue of his office, is the agent of all parties in interest, has been permitted to obtain a judgment against the company, without opposition, for upward of $150,000, without any legal investigation of the amount due him, and without there being anything on the books to show that his claims have been in any proper way examined by the board, or by any committee or member thereof, before they permitted this judgment to be obtained.

Third—The rolling stock, worth half a million of dollars, has been actually sold at a sheriff's sale, and bought in by Mr. Patchin, president of the company, in his own name, for a sum utterly inconsiderable, (about $10,000). This rolling stock now actually stands in his name; he is recognized by the board as its lawful and absolute owner, and his title up to this moment is not contested in any way by any one.

Fourth—A lease has been executed for one or three years, at Mr. Patchin's option, by which some $20,000 or $25,000 per annum are paid to Mr. Patchin, before interest to bondholders or dividend to stockholders.

Fifth—The road pays at present neither dividend nor interest. The interest due in May last, on the Buffalo and Attica half of the road, is in arrears, and that on the Attica and Hornellsville division, due in July, is in the same condition. These arrears already amount to $42,000. Legal steps are being taken by the trustees to foreclose the mortgage, but it is to be borne in mind that they can only be foreclosed for the interest, and this operation must be renewed, at great trouble and expense, every six months until the principal is due.

SUNBURY & ERIE RAILROAD.

The financial affairs of this Company appear to be in a bad state.

A special committee in behalf of the Philadelphia City Councils, have reported as to their examination of the "Sunbury and Erie Railroad Company" affairs. They conclude:

"Your Committee further report, that in discharge of their duty they visited the office of the Company, for the purpose of examining its books; that the books exhibited to them consisted of a Receipt book and a Cash book. The Cash book, which appeared to answer for Ledger, in fact for an entire set of books, was so kept that your Committee were satisfied that they could not, without a very laborious and protracted examination, and without making up from it a correct set of accounts, report accurately and satisfactorily to your body, as to the condition of the finances of that Company, or the manner in which the large amount paid by the city had been disposed of. As nearly as they could ascertain, however, the cash balance (as it is termed under the mode of keeping accounts pursued by the Company) was, Aug. 31, 1854, about $420,063 95, made up as follows:

Cash on hand	$ 45,454 41
Erie City Bonds	125,000 00
District of Richmond	150,000 00
Philadelphia sixes	81,000 00
	$401,454 41
Deficit, about	$18,609 54

"This $18,000 deficit is, as your committee understand, the sum used in lifting the remainder of the outstanding bonds, as heretofore mentioned.

"In view of the interests of the city, both as a stockholder and otherwise, in the condition and prosperity of the road, your committee recommend to Councils the appointment of a competent accountant, to make a thorough and complete examination and report of the past receipts and disbursements, and the present financial condition of the Company.

"In conclusion, your committee beg leave to express the hope that the examination which they have conducted, as they believe, in a candid and impartial spirit, may not be without benefit; but that the facts elicited may enable both Councils and the citizens at large better to understand their position in regard to this particular Company, and better to guide their future action as to similar applications."

MEMPHIS AND LITTLE ROCK RAILROAD.

We learn from an article in the Memphis *Eagle* and *Enquirer*, that the eastern terminus of this line will be immediately opposite the city of Memphis, at a place called "Hopefield." Of the progress of the survey the *Eagle* and *Enquirer* remarks as follows:

Two parties of engineers are now in the field locating this road. The one which started from a point opposite this city, has already laid down the road to Ten-Mile Bayou, and are prosecuting the work on toward the St. Francis with great vigor. Their instructions, which are strictly complied with, are to find the *best* route, and to totally disregard all landholding interests whatever. It is estimated that in the ten miles already surveyed and located, there is a saving of some $30,000 in the cost of construction, over what it would have been on Gregg's line—the heavy embankments through deep overflows being avoided, with scarcely any perceptible deflection from a right line. So far, the overflow on the line of the road as laid down, will not exceed an average of four inches. It is the determination of the company to build it above the overflow, irrespective of the levees. This is sound policy; for a great work like this, destined as it is to become one of the most thronged thoroughfares in the Union, ought not to be subject to any contingencies whatever, however remote or improbable. It is believed that these principles may be maintained throughout the entire length of the road, laying it down on the *best* and *cheapest* route, without increasing the distance between the Mississippi and the St. Francis, more than three-quarters of a mile over that of Gregg's air-line. But even if this were not so, and the road should be lengthened double or treble that quantity, it would still be sound policy and economy to adhere to these principles. Locations of lands made with a view to their being reclaimed and made valuable by the railroad company, may not yield quite so good returns of speculation, but the interests of the company and of the public at large will be promoted thereby.

THE SPARK AND DUST NUISANCES ON RAILROADS.

In a railroad sense, it is no longer true that "Dust we are, and unto dust shall we return." The nuisance of sparks, and sharp dust to the traveler by rail, is doomed. We lately rode from Buffalo to Fonda, a distance of 252 miles, in the hindmost car of an express train, and on getting out, had on an indisputably black hatband, a coat of recognizable jet, and were wholly free in nose, eyes and beard, of any of the customary evidence of having traveled on the Central road. We believe that not a table-spoonfull of dust could have been swept and gathered up, in the entire length of the car. We could not perceive that in that long ride, any dust whatever came into it.

The window-sashes bore the stamps, "Geo. Neilson, Boston, May 30, 1854." As well as we could see, this patented improvement of the railroad car, consists in passing the air that enters, through sieves of wet sponges in the roof, and of contracting the space by which it goes out, so that the current is constantly outward under the pressure from above, and never inward. The sponges catch all the cinders and dust, and as no air can come in at the windows, the traveler rides in a clean and cool atmosphere. Ended forever, also, is that nuisance of the thorough draft, established so often upon the rheumatic, by people gifted with the constitution of sawlogs, and the manners of oxen. The windows *can't* be opened. Only a central little glass door swings on its hinge, surrounded by glass, however, sufficient for light and observation. Mr. Neilson is a public benefactor. We think that his improvement will completely succeed.—*Buffalo Democracy.*

We have not heard that any of our railroads have ever tried any one of the many experiments to exclude sparks and dust from cars. This shows a want of energy not very creditable to the railroad management of Ohio. There are many roads on which these annoyances are entirely excluded, but the moment the traveler strikes Ohio soil he must take a long breath, shut his mouth, and eyes, and lungs, and dart across the state in a perfect cloud of dirt and fire.—*Cleveland Herald*

MONETARY.

At the East we see that the Money Market is fairly supplied with capital, which can be readily had on undoubted security. The demand among the mercantile community is active, and the Banks are unable to discount their offerings. The street rates, however, are not greatly changed from former quotations. Call loans can be had at 7 per cent. Prime business paper ranges from 10@12 per cent.; less known at 15@20.

Foreign Exchange rates at 110, and the shipment of specie continues heavy, with a prospect of an increase rather than of a falling off.

In the STOCK MARKET we note something of a fluctuation; in the early part of the week prices were well maintained; in the middle there was something of a rise, while the week closed with a s slight decline. The indications, however, are very favorable, and we confidently look for an improved state of affairs in the Stock Market.

The sales of Stock at auction have been as follows:

By A. H. Nicolay, Sept. 28—

$4,000	B'ds Canandaigua & Elmira 2d mor. 7s. '57	79 50
11,000	" " "	78 25
4,000	" Flushing, L. I., 7s. '63	70 87½
1,000	" " "	69 00

All with interest.

87	Shares Mad. Riv. & L. E. Railroad Co.	60 00
60	" Third-Avenue "	32 00
25	" " " "	33 00

At the Stock Board, of New York, we note sales of the following Western Stocks during the week euding 28th ult., viz:

$11,000	Ohio 6s. '60		106@107
2,000	" " '70		111
2,000	Arkansas 6s		100
1,000	Virginia 6s		100
1,000	Kentucky 5s		105¼
7,000	Bonds Chicago & R. I. Railroad		86@86½
42,000	" Illinois Central	"	74¾@75
285	Shares Mich. Central	"	89¾@90
134	" Clev. Col. & Cin.	"	103½@105
450	" Cleveland & Toledo	"	68¾@72
538	" Illinois Central 10s.	"	99¾@100½
85	" Mich. Southern	"	95@98
20	" " " coustr.	"	86
7	" Northern Indiana	"	93
13	" Galena & Chicago Union R.R.		79¼
49	" Clev. & Pittsb'g R.R.		50
20	" Madison & Indiana R.R.		20

New York & Erie sold from 41½@45¼ closing at 45.
New York Central sold from 90@92⅝ closing at 91⅞.

At the West we quote Money as having been quite stringent throughout the week, with a partial easibg up at the close.

The new Bank law has gone into operation, but is very little regarded, except by the Bankers, who purchase the small bills of the Indiana free Banks at a discount of 1@2 per cent. The issues of our State Banks are becoming more plenty, but still far short of the necessity of the business community. The Collector of this port had some $100,000 in change sent by government to accommodate the business community here, but we understand he asks 1 per cent. premium in exchange for gold—a tolerably heavy shave on gold, to obtain which a premium of 1½ to 2 per cent has to be given besides.

The Indiana free Banks are withdrawing their bills from circulatiou and having them, cancelled by the Auditor, and their stocks returned. Some $500,000 have been returned, of which some $60,000 only have been re-issued in larger bills.

Eastern Excaange rates at 1@1¼ for Bankers' names.

In the Stock Market we notice quite a buoyancy, and a disposition to invest in our best stocks for permanent investments: but the feeling is checked by the stringency in the money market. Nor can we hope for a better state of affairs until money becomes easier.

The transactions for the week will be found under their appropriate head.

NEW LOCOMOTIVE FOR LITTLE MIAMI RAILROAD.—We learn that Messrs. Moore & Richardson have just completed a new locomotive for this road, which will compare favorably with any from the East. We will give a further description of it, in our next issue.

From the Mechanics' Magazine, May, 1854.

ON THE FATIGUE AND CONSEQUENT FRACTURE OF METALS.

At a recent meeting of the Institution of Civil Engineers, a paper was read on the above subject by Mr. F. Braithwaite, M. Inst. C. E.

Many accidents, the causes of which had been pronounced "mysterious," having professionally engaged the author's attention, he had carefully examined the circumstances of each, and the condition of the fractured metal, in all cases, and at length arrived at the conclusion, that almost all the accidents might be ascribed to a progressive deteriorating action, which might be termed the "Fatigue" of metals.

Metal in a state of rest, although sustaining a heavy pressure or strain, as in a beam or girder, and exhibiting only the deflexion due to the superposed weight, would continue to bear that pressure without fracture so long as its rest was not disturbed, and the same strain was not too frequently repeated; but it either of these cases occurred a certain disturbance of the particles took place, the metal was deteriorated, and that portion subject to the reiterated strain was so far destroyed, that it ultimately broke down. This might also arise from sudden concussions, when the metal was under a certain strain, and those concussions might be caused by the girder being suddenly unloaded.

Several examples were given of accidents of the kind that had been alluded to; for instance, that of a vat in a London brewery, carried on cast-iron girders, by which it had been supported for some years; but suddenly, without any apparent cause, they broke, and killed and wounded some workmen. In this case it was shown that the girders were not originally sufficiently strong for the load, and therefore the intermittent load of the vat, which was sometimes full and at other times only partially so, and then empty, caused a constantly recurring deflexion, and a subsequent corresponding effort to regain its natural position, by which the composition of the metal was disturbed, and a fracture ensued.

Other examples of the same nature were given, and it was shown that the repeated buckling of the tube-plate of a locomotive, arising from the action of the pistons, had a tendency to cause fracture mechanically; and also that the side-strains and vibrations to which suspension-rods of the ash-pans of locomotives were subjected, had produced very serious results, which it sufficed to point out forcibly to guard against the recurrence.

The author contended, that presuming adequate dimensions to have been given to girders, and the stipulated weight not to have been exceeded, the chances of accident were remote, but that any repeated deflexion, either at intervals, or continued for so long as to induce a permanent depression, must be productive of danger, which could only be averted by altering or replacing the parts deficient in strength, and maintaining a rigid supervision, whether of beams when loaded, or of parts of machinery, or of railway stock after working. By such means accidents would be prevented, and a greater degree of confidence be established in structures in which metal was employed.

The sale of the Hudson and Berkshire railroad has been postponed by the Comptroller to the 24th of October.

NEW RAILROAD IN TEXAS.—The Austin State *Gazette* publishes the following items:

"Few know that a company of gentlemen, many of them wealthy planters of Louisiana, are making vigorous exertions to build a railroad from the Mississippi river, below Red River, and on a line running to near the mouth of Bayou de Glaises, thence to Cheneyville, and to the Sabine river, and onward to a point of intersection with the Pacific railroad. It is called the Louisiana Central Stem of the Mississippi and Pacific railroad Company, and the office of the company is at Marksville. We are acquainted with several of the stockholders, and know them to be men of business, capital and energy, and we feel somewhat assured that the enterprise will be successful.

☞ John O. Sterns has been appointed Superintendent of the Central railroad of New Jersey, in place of George H. Pegram, deceased.

The Shortest, Quickest and Best
ROUTE TO LOUISVILLE.

MADISON, INDIANAPOLIS, PERU, TERRE HAUTE, MICHIGAN CITY, CHICAGO, GALENA, ST. LOUIS, AND NEW ORLEANS.

OHIO & MISSISSIPPI RAILROAD,

ON MONDAY, SEPTEMBER 18, AND UNTIL FURTHER notice, the Passenger Trains will run as follows:

For Louisville and New Albany.

Leave Cincinnati at 7.15 A. M. and 3.15 P. M., connecting with the Jeffersonville Railroad at Seymour, and arrive at Jeffersonville, opposite Louisville, at 1 o'clock P. M., and at 9 P. M.

Returning—Leave Jeffersonville at 8.30 A. M., and 3.15 P. M., arrive in Cincinnati at 2.30 P. M., and 9.30 P. M. No delays in connecting with any other Railroad,

Fare $2 50.

For Indianapolis.

Leave Cincinnati at 7.15 A. M., and 3.15 P. M., connecting with the Indianapolis and Cincinnati Railroad at Lawrenceburg, for Indianapolis, and all the principal cities and towns of the North and West.

Returning—These trains arrive in Cincinnati at 4.05 P. M., and 9.30 P. M.

Fare $3 00.

For Lawrenceburg and Aurora.

Leave Cincinnati at 7.15 A. M., 10 45 A. M., 1.27 P. M., and 5 P. M., stopping at all the regular stations.

Returning—Leave Aurora at 6.50 A. M., 3.15 P. M., 2.55 P. M., and 8.23 P. M., stopping at all the regular stations, and arrive in Cincinnati at 8.10 A. M. 2.30 P. M., 4.05 P. M., and 9.30 P. M..

FREIGHT TRAINS for Jeffersonville and all intermediate stations, leave Cincinnati at 9.30 A. M.

For further information see handbills, or apply at the Ticket Office, on Fourth street, north side, four doors from Vine street, oposite new Custom-house.

S. S. POST.
Chf. Eng'r and Supt.

Passengers, by leaving their address at the Ticket Office, will be called for by St. Louis and Cincinnati Omnibus Line.

Omnibuses call at all the principal Hotels, for each train.

W. S. BABCOCK, Agent,
Sept 5. St. Louis and Cincinnati Omnibus Line.

ENGINEERING!!

The undersigned is prepared to furnish SPECIFICATIONS, ESTIMATES, AND PLANS, in general or detail of all kinds of Steam Vessels, Engines, Boilers, Mill Work, &c Particular attention given to the superintending of LOCOMOTIVES, TENDERS, CARS, *And Railway Machinery of every Description*, While under construction.

AGENT FOR THE PURCHASE of, on commission, all articles required for Railroads, Steam Vessels, Locomotives, Engines, Boilers, Machinery, &c.

General Agent for ASHCROFT'S STEAM GAUGE, ALLEN AND NOYES' METALIC SELF ADJUSTING CONICAL PACKING, DUDGEON'S HYDRAULIC JACK. Also, for Water Gauges, Indicators, Steam Whistles, &c., &c.

CHAS. W. COPELAND,
Consulting Engineer,
s 5-tf 64 Broadway, N. Y.

TO RAILROAD COMPANIES.

THE subscriber, manufacturer and agent for manufacturers of railroad materials, would solicit from railroad managers in the West their orders for

RAILROAD SPIKES, CAR AXLES, RUBBER SPRINGS, RUBBER HOSE, LOCOMOTIVE TIRES, SPRING STEEL, CAST STEEL, NUTS AND WASHERS, LOCOMOTIVE LANTERNS, ETC.

A. S. WINSLOW,
9 and 11 West Second Street,
mr. 24 † Bet. Main and Walnut Sts. Cincinnati.

Myers' Patent Cylindrical Car.

NOTICE.—The Subscriber having become proprietor of MYERS' PATENT CYLINDER CAR, for a considerable portion of Western territory, including the State of Ohio, offers the same to Rail Road Companies on favorable terms. The public will be furnished within a short time with complete explanations of its operation, together with the results of actual experiments testing its applicability to all the uses for which it is recommended. W. CLOUGH,
South-western Car Works.
Madison, Indiana. May 11.

ENGINEERS' MATERIALS.

EGGERS & CO.,
WHOLESALE DEALERS IN
PAPER & STATIONERY,
Since first January,
No. 127 Walnut St., bet. Third and Fourth.
CINCINNATI,

Keep the most complete stock in the West of every thing used by Engineers. On application, a catalogue with prices will be forwarded. [jy.21-†.

ENGINEERS' & SURVEYORS' INSTRUMENTS!
JAMES FOSTER, Jr.,
MATHEMATICAL AND PHILOSOPHICAL
INSTRUMENT MAKER!

HAVING removed from his old stand to south-west corner of Fifth and Race street, and increased his facilities for making instruments, is now ready to supply Levels, Transits, Theodolites, the Dumpy or Gravatt Level, Circular Protractors of Troughton & Simms model, Surveyors Compasses, Pocket Compasses with and without sights, in great variety. All kinds of Land Chains; Ivory and Box wood Scales of all kinds and graduation; Drawing instruments of all kinds, brass and German silver. Measuring tapes of all kinds, Magnets, Magnifyers, Barometers, Spy Glasses, &c., &c. Repairing promptly attended to. ap.6-6*.

NUGENT'S COLLEGE
OF
ENGINEERS & MECHANICS,
PUBLIC SQUARE, CLEVELAND, OHIO;
C. NUGENT, C. E., Principal.

THE design of this Institution is to afford young men an opportunity of acquiring a knowledge of the profession of Civil Engineering, and to Mechanics and Tradesmen a sound theoretical and practical knowledge of Mathematics, Architectural and Mechanical Drafting, Plain and Ornamental Penmanship, &c. For further particulars address the Principal. au.10.

New Works on Civil Engineering.

THE Field Practice of Laying out Circular Curves for Railroads. By John C. Trautwine, Civil Engineer.—4th Thousand, in pocket-book form with tucks.

—ALSO—

A New Method of Calculating the Cubic Contents of Excavations and Embankments, by the aid of Tables and 10 Engraved Plates of Diagrams. By John C. Trautwine, C. E.; 2d edition.

Price, one dollar each. Postage on the Curves, five cents; on the Excavations and Embankments, eight cents. For sale by WILLIAM HAMILTON,
Hall of the Franklin Institute.
Sept. 21-3* Philadelphia, Pa.

STEREOTYPE FOUNDRY,
AND AGENCY OF
L. JOHNSON & Co.'s TYPE FOUNDRY.

C. F. O'DRISCOLL, (Successor to A. C. JAMES,) is prepared to execute in the best manner all kinds of
STEREOTYPING,
Including Books, Pamphlets, Music, and Jobs of every description. He will keep on hand an assortment of
Card and Job Type, Cuts, Rules, &c. &c.
from the foundry of L. JOUNSON & CO., of Philadelphia, and will furnish to order PRINTING MATERIALS OF EVERY KIND,
AT THE FOUNDRY PRICES.
C. F. O'DRISCOLL,
No. 167 Walnut Street,
Cincinnati, O

CHARLES FRODSHAM'S

IMPROVED WATCHES!

BEGGS & SMITH,

JEWELERS,

No 6 West Fourth St.,

Adjoining the First Presbyterian Church,

CINCINNATI, O.,

HAVE received from Mr. Simon Willard, Boston, Agent for the United States, the sole and exclusive agency for the sale of **CHARLES FRODSHAM'S** NEW SERIES OF IMPROVED CHRONOMETER WATCHES, in the states of Ohio, Indiana, Illinois, Michigan, Iowa, Wisconsin, Missouri, Kentucky and Tennessee.

In the Watches of the New Series, Mr. FRODSHAM has succeeded by a more perfect method of compensation, a more correct adjustment in isochronism, and an entirely new and peculiar construction of the train, by which more power is obtained without increase of size, in producing timekeepers of wonderful and unrivalled accuracy. The great importance of the improved watches is a perfect regularity of time under every variety of climate, motion and position. So perfect are the adjustments, that the most violent exercise, such as horseback riding, jumping, etc., produces on them no sensible effect They are therefore, particularly adapted to Railroad purposes.

Liberty is given to refer to the following gentlemen, who, among many others, have proved the excellence of Charles Frodsham's Watches as timekeepers:

Gen. John S. Tyler	.....	Massachusetts.
John E. Thayer, Esq.	.....	"
Enoch Train,	"	"
E. C. Bates,	"	"
F. W. Thayer,	"	"
Wm. Whiting,	"	"

Hon. Ebenezer Lane, E. F. Osborne, Esq.	.....	Sandusky. Ohio.

The Prices of the New Series Gold Cases, are According to Size, viz:

SIZE 12	.....
" 14	.....$230
" 16	.....
" 18	 250
" 20	 275
" 22	 300

Recommendations:

Boston, Sept. 3, 1853.

The Compensated Lever Watch I purchased of you, made by Charles Frodsham, London, No. 7300, has varied but thirty seconds from mean time in six months, by actual daily comparison with your regulator.

Yours, &c., ALVIN ADAMS.

Mr. Simon Willard.

Boston, Feb. 4, 1854.

Mr. S. Willard Dear Sir—The Frodsham watch, No. 7557, I purchased of you last October, has performed wonderfully well. I have compared it almost daily by your Astronomical clock, and its variations for ninety days is but one second, or a loss of but one-hundredth of a second per day. I consider it better than any Marine Chronometer I ever used.

Yours truly,
FISHER A. NEWELL,
Late master of Sch., Honolulu.

Sandusky, Ohio. Jan. 1, 1854.

Mr. S. Willard, Dear Sir—More than six months ago I purchased of you two of Frodsham's best watches—up to this time, one of them, No. 7571, has altered from mean time but twenty-seven secouds, and the other, No. 7517, but twenty-three seconds in the same period.

Yours, respectfully.
E. F. OSBORNE.

To Mr. Simon Willard.

Gentlemen—On the 1st of April last I procured from Mr Willard, of Boston, one of Frodsham's improved series of watches. It was regulated and set to Cincinnati time. It has not, in that period, been suffered to run down, nor have the hands been moved, and to day it is 20 seconds only slow. Respectfully yours,

HENRY O. AMES,
Sup,t Cin. Ham. & Dayton Railroad.

August 18, 1854.

To Messrs. Beggs & Smith.

The following is an extract from a letter of William Brown, Esq., Springfield, Ohio, engineer on the M. R. & L. E. R. R., who has personally kept the rate of several of Frodsham's watches.

"Finally from what I have known of Frodsham's watches, I am very strongly impressed with the idea, that they are a decided improvement on all other timekeepers, and were they set in gimballs and used with the same care, I think their performance would equal that of Mr. Frodsham's celebrated box chronometer, and would answer the same purpose for determining longitudes."

Sept. 21-6*

Notice of Copartnership.

MR. PETER MARIE. heretofore of the firm of Decoppet & Co., has this day formed a copartnership with Mr. Rudolph Kanz, (for many years with the banking house of Messrs. L. Von Hoffmon & Co..) under the firm of MARIE & KANZ, at 27 William street. Their attention will he devoted to the purchase and sale on commission of Stocks, Bonds and Foreign Exchanges, and to the negotiation of business paper.

DENNEY'S DIVIDED CAR AXLE.

PATENTED JANUARY 31ST, 1854.

THE ATTENTION OF RAILROAD COMPANIES is respectfully invited to an examination of the merits of this valuable invention, which offers to add largely to the safety of life and property.

The valuable features of this arrangement of axle are, a saving of full fifty per cent. in motive power on crooked roads: the rails are protected from being destroyed by the flanges of the wheels coming in contact with them on the curves, as is the case with the stiff or rigid axle, which not only destroys the rail but puts a constant strain upon the wheel and axle, causing the wheel on the inner rail to trip or revolve upon the rail under the weight of the car and load, while the opposite wheel is traversing its greater distance; the tendency of which, is to wear the wheel flat, and cause it, or the axle, to break sooner or later. There is less danger of the car leaving the track from its having become scrubed.

Axles fitted in this way do not require to be near so large, and yet contain more strength than the common axle, for the reason that the liberty given to the wheels, which allows them to accommodate themselves to the curvatures of the road, removes wholly the strain thrown upon the ordinary axle: and therefore, it requires no more strength of iron at any point between the wheels, than is contained in the bearings, which in the ordinary axle, is not more than one-third of the strength of the other portions of the axle.

The elongated bearing which forms the connection is so proportioned as not to wedge or become tight in the alloy, the wear being almost imperceptible, requiring to be set up not oftener than once in twelve months, by a slight tightening of the screw nuts. If, from long service, the alloy becomes worn out, it can be refilled, making it as perfect as when first filled up, and the gauge of the wheels will never become changed so as to injure the running of the car.

It is after a series of the most careful experiments, conducted through a period of time sufficient to test in the most satisfactory manner, the real merits of divided car axles, and a thorough and practical test in real service of over two years, that we now offer to Railroad Companies one that we are assured will give universal satisfaction in its operations, and both simple and cheap in its construction.

We are now ready to dispose of rights to use the above axle on the following terms: We guarantee full and perfect satisfaction by giving ample time to thoroughly test its merits, and will require no payment to be made until such satisfaction shall be given. All applications to be made to

SAMUEL L. DENNEY,

Axes—1000 doz. Axes, assorted Yankee and Kentucky patterns, first, second, and third quality

Nails.—4000 kegs Shoenberger's and Wheeling Nails, now in store.

For sale by TYLER DAVIDSON & CO.,
mr 3 140 and 142 Main strost

NOTICE TO CONTRACTORS.

Mobile and Girard Railroad.

SEALED PROPOSALS will be received by the undersigned at this office, until the first day of December, for the Clearing, Graduation, Track-Laying, together with the building of all Bridges and Culverts of the Western Division of the Mobile and Girard Railroad, extending from Mobile to Greenville, covering a distance of 130 miles.

The work will generally be divided into one mile sections. and bids may be made for one or more of these sections. Separate proposals are desired for the Track-laying, building of Bridges and Culverts, likewise for the building of the Trestle-work, 5¼ miles in length, across the Tensas and Mobile Rivers, with the intervening swamps. The trestle-work will be 12 feet high, built upon Black Cypress Piles, found in abundance and adjacent to the line; the two rivers will be crossed with the common Pile Bridging with Truss Pivot Draw in the center of each.

Specifications with the form of the contract and proposals can be had of the undersigned upon application.

Plans, profiles and estimates of that portion of the line are now ready for examination. Parties proposing will please designate it as such upon the envelope.

The country is healthy, with no swamps after leaving the Tensas River. From Mobile to the river, 18.5 miles the grading is light and country very healthy at all seasons of the year. After the line leaves the Tensas River, it passes through, and on the ridge that divides the Alabama and Conecuh waters, easy of access by the Alabama River, and through a section of country well stocked with provisions.

Payments will be made one-third (⅓) in current funds, one-third in the capital stock of the Company, bearing (.08) per cent. interest payable in stock, until the road is completed, then to cease and become common stock of the road, and relying upon the earnings of the same for dividends; the balance (⅓) one-third to be paid in the (.08) per cent. convertible bonds of the Company, maturing in (5) or more years, at the option of the contractors, coupons payable semi-annually either in Columbus, Ga., Mobile, Ala., or at New York, at the option of the holder.

To bidders personally unknown to the undersigned, bond and approved security will be required to an amount not exceeding (¼) the amount of the contract, for the timely and faithful completion of the same.

22½ miles of the road from Girard west, will be open for business the first of November, and 52 miles 9 months therefrom; it is the intention to have the entire line of 245 miles open for business early in 1858.

Baltimore & Ohio Railroad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was opened to the Ohio River in the spring of 1853, and has already established a high character with the business community of the West. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of the country through which it runs, and its many admirable provisions for the expedition, comfort and safety of travelers, it has received such favor as a passenger road, (with its present connections,) as to show that it will become the preferred route for all portions of the West and South-West as soon as its further connections are formed by the completion of the Central Ohio, North-Western Virginia and other Railroads now rapidly finishing.

FOR PASSENGERS BY THIS ROUTE,

Through Tickets from all Parts of the West,

ARE NOW SOLD IN

Cincinnati, Louisville, Madison, Indianapolis, St. Louis, Chicago, Toledo, Detroit, Cleveland, Columbus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED

For Sending Travelers Direct to WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION

The fullest accommodations are provided. In motive power and Cars, the company has abundant resources, which are being further extended to meet the demands of Western Trade. In the dispatch and regularity of transpart, and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road connects directly in the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,

The numerous Steamers of the Parker Vein Line to New York and Boston, the Ericsson Steamers by Canal to Philadelphia and New York.

And various other Lines of Steamers and Sailing Vessels to the Eastern Ports, and to Richmond, Norfolk, Charleston, Savannah, etc.

J. B. FORD is the Company's Receiving Agent at Wheeling.

COLUMBUS PIQUA, AND INDIANA RAILROAD.

New route from Columbus, West and from Urbana, East.

On and after Monday September 19, 1853, two trains per day, (Sunday excepted) each way, will run on this Road, between COLUMBUS and URBANA. Will leave Columbus at 4.50 a.m., and 3.30 p.m.—arriving at Urbana at 8.12 a.m., and 6.14 p.m. Returning—will leave Urbana, for Columbus, at 9.15 a.m., and 3.00 p.m.—arriving at 12.05 and 6.55 p.m.

The 4.50 a.m. train, from Columbus, will connect with the night Express train from Cleveland and arrive at Urbana in time for the morning train north for Sandusky and intermediate points. Persons arriving by the morning Cleveland and Zanesville trains can have a few hours at Columbus and leave by the 3.30 p.m. train—arriving at Urbana in time to get supper and take the 5.35 p.m. train for Dayton and Cincinnati.

The 9.15 a.m. train from Urbana connects with the morning train from Cincinnati and Dayton that arrives at Urbana 8.40 a.m.—arriving at Columbus at 12.05 p.m in time for the 1 p.m. train for Cleveland, connecting with the Buffalo and Dunkirk boats. The 3.00 p.m. train will leave Urbana on the arrival of the Sandusky train—reaching Urbana at 2.45 p.m.—and arrive in Columbus in time for the various night trains.

A line of Omnibuses will connect with the trains at Urbana for the conveyence of passengers to and from Piqua and Greenville over a good Macadamized road.

A. G CONOVER, Sup
Piqua, Sept. 13, 1853. s29-tf.

Marietta & Cincinnati Railroad.

Chillicothe, May 6th, '54— Sup't.

Railroad Line.

Cincinnati, Hamilton & Dayton Railroad.

Summer Arrangement.

COMMENCING WEDNESDAY, JUNE 20th, 1854.

TRAINS will run by standard time, which is seven minutes faster than that of Cincinnati.

First Train

At 6 o'clock, A. M., Lightning Express for Dayton, Crestline, Pittsburgh, Philadelphia and Baltimore.

Second Train

At 6.10 A. M., for Hamilton, Richmond, Indianapolis, Terre Haute, Lafayette and Chicago, direct.

Third Train

At 8.20 A. M., for Dayton, Sandusky, Toledo, Detroit, Chicago, Cleveland, Buffalo, New York, Boston, Pittsburgh, Philadelphia, Baltimore and Washington.

Fourth Train

At 2 P. M. for Dayton, Greenville and Union.

Fifth Train

At 3.30 P. M., for Hamilton, Richmoud, Indianapolis, Terre Haute, Lafayette and Chicago.

Sixth Train

At 5 P. M., for Dayton, Troy and Piqua, and intermediate stations.

Seventh Train

At 6.30 P. M., for Hamilton and intermediate stations.

The 1st Train, Express,

Will stop only at Hamilton and Middletown.

2d, 3d, 4th, 5th and 6th Trains,

Will stop at all regular stations.

The Seventh Train

Will stop at all way and flag stations.

The 1st Train

Will connect at Crestline at 12.30 P. M., with the Ohio & Pennsylvania Train for Pittsburgh, Philadelphia, Baltimore, etc., forming a direct and continuous line for each of these cities. Cars run through to Crestline without change. Baggage checked to Pittsbugh.

2d Train

Will connect at Richmond at 9.05 A. M., with Train of Indiana Central Road for Indianapolis; arrive at that place at 12 M., thence to Terre Haute, Lafayette, or Chicago without detention. Time as short as by any other route.

3d Train

Will connect at Dayton at 10.45 A. M., with Mad River Train, and arrive at Sandusky at 4 P. M., and go immediately on board the splendid steamers **St. Lawrence** and **Mississippi**, to Buffalo; thence at 7.30 A. M., with Buffalo and N. Y. City Road, to New York; arriving at that place at 10 P. M., also at Crestline 4.20 P. M., with Ohio and Penna. Train for Pittsburgh, Philadelphia, Baltimore and Washington.

The Same Train

Will also connect at Clyde with Cleveland and Toledo Train to Toledo. Chicago and intermediate points; and at Sandusky at 5 P. M., with steamer **Bay City**, for Detroit. Also, with Dayton and Michigan Railroad to Troy and Piqua, and at Piqua with Doylo & Co's Canal Packet Line to all points on Wabash and Miami Canals.

Fourth Train

Will connect at Dayton with Dayton and Greonville Railroad to Greenville, Union, and all points on Bellefontaine and Indianapolis Railroad.

Fifth Train

Will connect at Richmond at 6.40 P. M., with Indiana Central Train for Indianapolis, Terre Haute, Lafayette.

Passengers will bear in mind that the following rates of fare, via Lake Steamers, include both Meals and Staterooms, and that the fare to Philadelphia and Baltimore is One Dollar cheaper, and one less change of cars than by the Columbus route.

E. W. WOODWARD,
Engineer and Superintendent.

☞ The Omnibus Line will call for and deliver passengers to and from the trains to any part of the City.

J. HOWELL, Conductor.

☞ The Company will not be responsible for baggage exceeding $50 in value, unless the same be returned to the Conductor or Agent, and freight paid at the rate of a passage for every $500 in value above that amount.

je. 29

Covington and Lexington Railroad.

OPEN to Cynthiana, 66 miles. Two Daily Passenger Trains.

On and after Thursday, May 25th, and until furtber notice, Trains will run as follows:

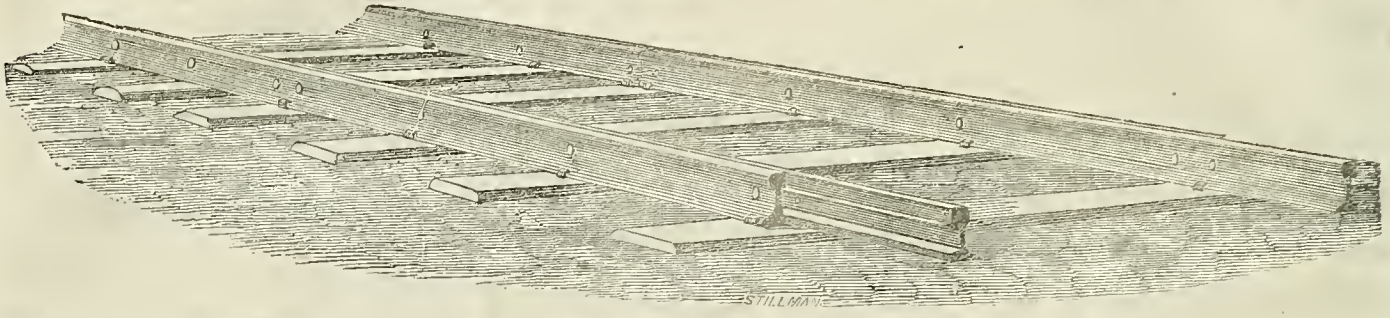
Express Train leaves Covington at 8 o'clock, A. M. stopping at Benton, Demossville, Butler, Falmouth, Callenville, Boyd's, Berry's, Robinson's and Garnett's only, and arriving at Cynthiana at 11.50 A. M. Returning, leave Cynthiana, at 1.30 P. M., stopping at the above stations, and arriving at Covington at 5.30 P. M.

Passengers for Paris and Lexington, by taking the above train, will take dinner at Cynthiana, and by Messrs. Thurston and Thompson's line of Omnibusses, will reach Paris at 4 o'clock, P. M. The Evening Train of the Maysville and Lexington Road, leaves Paris at 5 o'clock, P. M., enabling passengers by this route to reach Lexington at 6 o'clock, P. M. Returning, leave Lexington by the 7 A. M. Train of the Maysville and Lexington Road for Paris, leave Paris by Messrs Thurston & Thompson's line of Omnibusses at 8.30 A. M. arriving at Cynthiana in time for dinner, and connect with the train for Covington at 1.30, P. M., arriving at Covington at 5.30 P. M.

Accommodation Train leaves Cynthiana at 6 o'clock A. M., stopping at all regular and flag stations upon the road, and arriving at Covington at 10.10 A. M. Returning, leave Covington at 3.15 P. M., stopping as above, and arrive at Cynthiana at 7.40 P. M.

Passengers by this train can leave home in the morning, pass five hours in Covington or Cincinnati, and return home before dark.

The Express Train will stop only at the stations named. Passengers for other points must take the Accommodation train.



Freight trains, for the present, will leave Covington Mondays, Wednesdays and Fridays; leave Cynthiana Tuesdays, Thursdays and Saturdays.

Freight will be received at Covington and Cynthiana up to 4 o'clock P. M., for the train of the following morning.

J. M. DOUGHERTY,
jy. 20. Superintenden

WINSLOW'S

PATENT COMPOUND RAIL.

THIS RAIL, which is represented by the above, has now been in use on several Roads for upwards of three years; during which time it has become established among Railroad Managers as realizing the advantages of a

THEORETICALLY PERFECT RAIL.

Its advantages over the common form of "T" Rail are—a saving in the wear and tear of Machinery—it saves, to a great extent, in the repairs of track—it secures a high rate of speed with the same power, and what is certainly of equal importance, complete protection against some of the accidents to which roads are liable Being practically a continuous Rail for the entire length of the road, without break at the ends of bars, the jarring motion communicated thereby in passing over the common "T" Rail is avoided, as is also its effects upon Cars and Machinery. The comfort of travelers must of course be greatly increased.

This Rail is now manufactured at Hanging Rock Iron Works, upon the Ohio River, and at Mt. Savage Iron Works, Maryland. Specimens of the Rail and pattern of the same will be gladly shown, as well as information in relation thereto, given by application to

A. S. WINSLOW, Nos. 9 & 11 West Second Street, bet. Main and Walnut Sts., CINCINNATI.

KENTUCKY LOCOMOTIVE WORKS.

CORNER OF KENTUCKY AND TENTH STS.

LOUISVILLE, KY.

THE Proprietors of the Kentucky Locomotive Works would respectfully inform Railroad Companies and the public generally that, having completed their establishment, they are now prepared to receive and execute orders with fidelity and dispatch.

They will contract for

Locomotives, Passenger, Baggage, Freight, Gravel and Hand Cars,

Of every style and pattern, as well as all kinds of St and Machinery required for railroads.

Particular attention will be paid to repairing, which they have every facility.

They are also prepared to contract on favorable terms for building all kinds of Machine Tools, such as Turning Engines, Lathes, Planers, Drills, Slotting, Spliting, and Shaping Machines, of every variety of pattern.

Having also a large FOUNDRY connected with the establishment, orders for Castings are solicited, and will be filled with promptness.

Car Wheels of any pattern can be furnished on short notice. Double and single plate and Spoke Wheels of all sizes constantly on hand.

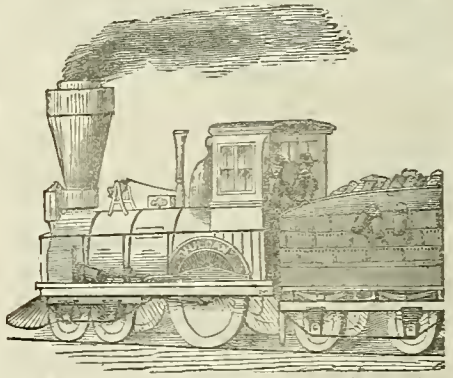
☞ Communications or orders must be addressed to OLMSTED, TENNYS & PECK,
je.8-tf Louisville, Ky.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Reservoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.



The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.

WILLIAM SHERBURNE,
PRINCIPAL AGENT.

DESCRIPTION OF PLAN.

Fig. 1, of the above cut, represents the foundations, consisting of *Bank* and *Track Walls*, the latter made of cut, the former of hammer-dressed stone, with cut stone coping. The Track is bent of the ordinary T rail, spiked and leaded to the stone track walls. The Center Pier is made of cut stone, with a step for screw and pivot bolted to the same.

Fig. 2, shows the framing.

Fig. 3, is a side view of Main Truss, with the mode of gearing, including the mitre-wheels, iron crank frame, rack and pinion, foundations, pivot wheels and pedestals.

Fig. 4, gives a perspective view of rim, segments, decking, etc.

Fig. 5, is an end view of the main trucks, with pedestals and wheels.

Fig. 6, is a screw for pivot, 6 inches in diameter, working in a steel step through a nut for adjustment.

Fig. 7, shows a cross section of track wall, well, and pedestal

"GARDNER'S ROCK DRILL."

DESIGNED for Mining, Tunneling, Quarrying Use, and Rock Excavations of all descriptions, by the use of which a saving of 50 to 75 per cent. is made. This drill can be operated by hand, horse, or steam power, and works equally as well horizontally or at any angle, as perpendicularly.

A silver medal, the highest prize, was awarded these Machines at the World's Fair.

Applications for Territorial Rights and Machines must be made to the Patentee.

G. ARTHUR GARDNER,
Trinity Building, N. York.

REMOVAL.

The Office of the RAILROAD RECORD has been removed to No. **106** West Fourth St., north side, between Vine and Race streets, in the building occupied by the Cincinnati & Cleveland Short Line, the Cincinnati, Lebanon and Xenia, and the Cincinnati & Dayton Short Line Railroad Companies.

The location is in the very center of Railroad business, and but few steps from the Burnet House. Full files of railroad reports, maps, newspapers and other documents can always be found at this office, and it will always afford us great pleasure to give any information, and answer any queries on railroad matters, when in our power. We cordially invite railroad men from the country, when visiting our city, to honor us with a call and avail themselves of the facilities of our office.

RAILROAD CONVENTION AT NEW YORK.—A meeting of the Superintendents of the four great lines of railroads terminating in the city of New York—to wit: the New York Central, and New York and Erie, the Pennsylvania Central, and the Baltimore and Ohio—met at the St. Nicholas Hotel on Tuesday, the 26th ult., for the purpose of carrying out the details of resolutions adopted at the railroad convention of the 15th of August last. In consequence of the depression of the prices of produce, the small amount of freight offering, and the general strigency of the markets, it was thought inexpedient at this time to increase the prices for transportation of freights.

THE SPECIE ACCUMULATION OF THE UNITED STATES.

The accumulation of coin in the United States has been very rapid. This undoubtedly adds strength to the currency of the country, but is by no means of equal value to general commerce. The proof of this may be found in the fact that the withdrawal of coin from *circulation*, in the large depositories takes place in a greater ratio than the substitution of paper. If, in addition to this, we observe that a large portion of bank notes are held by the banks themselves, we shall find that the *actual money of circulation* has not increased in a ratio corresponding with the increase of coin. We may illustrate this by some striking proofs. Thus, take the depositories of the United States. The amounts held in the subtreasuries, on the 30th of June (the end of the fiscal year), for several years past, were as follows, viz:

30th June	1851	$13,604,092
" "	1852	15,960,735
" "	1853	22,896,306
" "	1854	28,888,812

Thus we see that there is an immense sum, in coin, hoarded up by the United States, and that this sum has increased *fifteen million*, or more than 100 per cent, in the last four years.

If we examine the condition of many of the banks, we find they have added little, or nothing to the circulation of money. Take the banks of New Orleans for example. The circulation and coin held by these bank on the same 30th June, were as follows:

Coin	$7,693,378
Circulating notes	7,250,646
Excess of coin	$ 442,728

At the same date, we have the following result for the banks of New York City:

Coin	$10,792,429
Notes	8,184,828
Excess of notes	$2,607,601

The banks of Boston gave the following aggregates:

Circulating notes	$8,541,440
Coin	2,934,060
Excess of notes	$5,606,554

The subtreasury—New York, Boston, and New Orleans, present the following results:

	Coin.	Notes.
U. S. subtreasury	$28,888,812	$—
N. Orleans banks,	7,693,374	7,250,646
N. York banks,	10,792,492	8,134,828
Boston banks,	2,934,940	8,541,494
Totals	$50,239,618	$23,976,968

These great depositories hold, then, fifty millions in coin, with twenty-three millions of paper, but a very small part of which is in general circulation—the notes of city banks being almost entirely held by banks and bankers, with whom they answer the purpose of coin.

We might pursue this subject farther, but enough has been shown, to illustrate the fact, that while the U. States have been accumulating coin, with great rapidity, the circulating medium has, by no means, increased as fast.

BALTIMORE AND OHIO RAILROAD—NEW ROUTE TO THE EAST.

Now that the Central Ohio railroad approaches completion, our attention is naturally drawn to the new route that will be opened thereby, directly with the cities of the Atlantic shore, via Wheeling and Baltimore; a route that has only to be known to become at once a favorite thoroughfare. Few persons only, know what a delightful ride it is over the Baltimore and Ohio railroad, between Wheeling and Cumberland, and few can truly realize what railroad building is until they shall have made this trip. We had heard and read much of the magnitude of this stupendous undertaking, but when we came to pass over it, we fouud that the half had not been told us, and that we had formed but faint conceptions of the reality.

From the mouth of Grave Creek, the point where the road leaves the Ohio river, until it strikes the banks of the Potomac river, at Piedmont, a distance of 162 miles, it passes through and over a succession of mountain ranges, ascending at times grades at the rate of 116 feet to the mile, until the summit of the Alleghenies is attained—2600 feet above the level of the sea—and thence descending toward the east, seventeen miles in one grade, of 116 feet to the mile, to Piedmont; winding and curving around and among the peaks, and following the sinuosities of the various rivers and streams, tunneling where some rocky barrier is interposed, bridging where some stream or fissure intervenes, until it would really seem that Nature can interpose no barrier to the determined energy of the human will; and so perfect is every arrangement, so well constructed is every inch of the road, that scarcely for a moment does the apprehension of danger flit across the mind; but rather, while climbing the steep sides of these lofty peaks, running through long, dark tunnels, dashing over lengthy iron bridges, or securely winding our devious way adown the mountain sides—now crossing some deep valley, surrounded by mountain ranges, whose summits are scarcely perceptible, and anon, traversing those very summits at undiminished speed, are our thoughts drawn from the work of the creature, stupendous though it be, to admire the yet more stupendous and far more vast handiwork of the Creator, as it lies spread out before us, in a coup d'œil unsurpassed, if not unequalled, by any other spot upon the globe.

It was our good fortuue to pass over this portion of the road in a train under the supervision of that prince of conductors and good fellows—as well as of Odd fellows—J. P. Dukehart Esq., who has long been in the employ of the Company—and long may he remain—and to him are we indebted for one of the pleasantest and most interesting railroad rides it was ever our lot to enjoy. He

pointed out every point of interest, along the line, both of nature and of art; explained to us the peculiarity of construction of bridges, tunnels, etc., thus enabling us the better to comprehend and appreciate the magnitude of the work.

The inducements offered to travelers from East to West, or vice versa, in speed, comfort and safety, as well as in sublimity and grandeur of scenery, are unequalled by any other road in the Union; while to the pleasure-seeker or valetudinarian, where is the spot more delightful, or more invigorating than the "Glades" upon the very summit of the Alleghenies? That spot from whence, out of one single spring, flow streams leading to the Chesapeake on the east, and to the Ohio on the west. Here the sportsman can find full employment for his rod or gun; in the way of the speckled trout from the mountain streams for the first, and the ruose and other game for the latter. Here has been erected a spacious hotel—which all last summer was full to overflowing all the season—and several handsome private dwellings; and ere another summer shall have rolled around, another still more capacious hotel will have been erected, to meet the necessities of visitors to this new, and henceforth to be, favorite summer resort.

We say to our friends who go to the North or East for change of scene during the summer, try the "Glades" once, and our word for it, you will never regret it. Be undeterred by any false reports, or fears of the road. No road in the country is more safe, and but few so free from inconveniences, especially *dust*, of which there is none, even in the dryest weather, as the entire line is ballasted with broken stone. Powerful ten-wheel engines take the trains over the heavy grades with as much ease and celerity as do the smaller engines the ordinary trains upon level roads, while with them the descents are made with as much security as if upon a level. The bridges are all built of iron, and floored with plank, to a width sufficient to remove, or indeed prevent any of that feeling of insecurity, so natural when crossing such superstructures, where the track cannot be seen at either side, being less in width than the car itself.

The police arrangements are admirable, men being stationed at all points along the line where there is, or can be, the remotest chance of their services being needed; and the running arrangements are so well understood by the engine drivers, as well as conductors, that a collision can result only from utter recklessness.

While the passenger facilities are thus cared for, the freight arrangements are no less perfect; and when the connection shall have been fully perfected with the Central Ohio road at Benwood, freight will reach Cincinnati from Baltimore, and vice versa, without change of cars.

This road has cost a heavy sum of money, and will yet cost much more, before the double track to Cumberland—needed for coal transportation—shall be completed, nevertheless, now that a connection has been opened on the west—an outlet for it—we predict that it will do a heavy and profitable business, notwithstanding its heavy grades. It has claims upon Cincinnati that should be heeded; we refer to its being a portion in the chain of Eastern connection through *Southern* Ohio, by which trade and traffic will be brought to this city, which, if directed upon the more northern cross roads, will give us the go-by. Cincinnati merchants look to it, that you do not let your own interests suffer in this matter.

BUFFALO AND PITTSBURGH RAILROAD.

We are indebted to E. R. Blackwell, C. E., for a copy of his report on this road, with maps defining the route. We learn from the report that several lines were run before the location was finally made, as follows: Starting at Buffalo, in a line south of east, it runs nearly to the town of Aurora; thence south through or near to the towns of Wales, Holland and Coonville; thence west of south, thro' Machias to Ellicottsville, and thence southward to the Allegheny river at Great Valley where it crosses the New York and Erie railroad. From this point the line runs nearly south to the Pennsylvania state line, in the direction of Tarport, following the banks of Tuningwant creek, to within a few miles east of Lafayette, when the line makes a turn to the east through the lands of the Lafayette Mineral Company, to the point of junction with the Allegheny Valley railroad from Pittsburgh; at this point, called Teutonia, the Sunbury and Erie road will cross, also. That portion of the line above described, within the limits of the state of Pennsylvania, is called the "Lafayette Railroad."

The maximum grade is 56 feet per mile, and this only for 4½ miles, Atachias, and 2¼ miles in descending the valley of Cattaraugus creek. The curves are easy, but in few instances less than one degree. Length 72.550 miles, of which 75 per cent. is straight line.

The estimated cost for the road ready for the rails is	$958,960,00
Iron, ballast, etc.	886,004.00
Station houses and equipment	248,800,00
Total	$2,093,764.00

which does not include right of way, or depot grounds, etc., in the city of Buffalo.

The work is under contract to Messrs. Moore & Pierson, who have two of the new steam excavators at work on the heavy portions of the line.

The Lafayette railroad is under contract to Messrs. Storey, King and Sherrill, and is rapidly progressing.

The importance of this road to Buffalo is fully set forth in the report, with an estimate of the probable business, which shows a remunerating traffic in the necessaries of trade, such as building stone, coal, etc., aside from the other business that must necessarily pass over a line of road connecting two such important points as Pittsburgh and Buffalo.

ATLANTIC, TENNESSEE & OHIO RAILROAD COMPANY.

We see by an advertisement in the *Journal* and *Visitor* published at Jonesborough, East Tennessee, that books have been opened for the subscription to the stock of this company at several places in that state, in conformity with the charter, granted February 25, 1851.

We can not learn from this advertisement what the proposed route is to be, and shall look for further information to the action of the commissioners who were to have assembled at Jonesborough on Monday, 2d inst., to organize the company.

Eastern Tennessee and South Carolina seem to be suddenly re-awakened to the availability of a direct connection with the Ohio river at Cincinnati. We trust that it may result in something definite; that rival interests will, unite their means and energies and agree upon some common route, so that it may be eventually completed.

RAGS—PAPER.

It has become almost an utter impossibility to obtain rags sufficient to supply the demand for paper-making; in consequence the price of paper has materially advanced. Although large amounts of rags are annually gathered in this country, yet is it a fact that by far the larger quantity comes from abroad. We find in the *Economist*, a table of exports and imports of paper and imports of rags, from 1838 to 1850, a period of 12 years, as follows:

	Exports Paper.	Imports Paper.	Imports Rags.
1838.....	$94,335	$164,179	$465,448
1839.....	80,149	186,418	588,318
1840.....	76,957	146,790	564,689
1841.....	83,483	60,193	496,227
1842.....	69,862	92,771	468,220
1843.....	51,391	19,997	*79,853
1844.....	83,108	104,648	295,586
1845.....	106,190	98,009	421,080
1846.....	124,597	194,220	304,216
1847.....	88,731	195,571	385,397
1848.....	78,507	415,668	626,607
1849.....	86,827	395,773	524,755
1850.....	99,696	496,563	748,707

* Duty began to be enforced on rags, 1843.

Yet, large as the table exhibits the import of rags to have been, the supply is greatly short of the demand; and not in this country only, but in England also. Large sums have been offered for the discovery of some other substance that will take the place of rags in the manufacture of printing paper, but as yet without any entirely practical result, though several substances have been tried with a greater or less degree of success. Here is a fine opportunity for the exercise of Yankee ingenuity

MARIETTA AND CINCINNATI RAILROAD OPENED FROM CINCINNATI TO CHILLICOTHE.

Thursday last, the 5th inst., will be a day long remembered by the citizens of Chillicothe, and the invited guests of the occasion, as a bright one in their calendar—one which witnessed the completion of that link in the railroad system of our state by which the vast valley of the Scioto, with all its productions, agricultural and mineral, was opened up to the trade of Cincinnati, which city will have no less cause to rejoice in this additional iron bond than those upon its line.

Numerous invitations had been dispatched to our city, mailed on the 29th ult., only a few of which reached their destination at the opening of the evening mail of the 4th inst.—making the rapid journey of 90 miles in five days—which distance we have just made in six hours. In consequence of this mishap, the delegation from our city was not as large as it would otherwise have been; nevertheless, the Queen City was well represented by members of the city council, the press, and a number of other gentlemen interested in the railroad progress of the country.

On our arrival at that beautiful city, Chillicothe, so cozily nestled in the very bosom of the Scioto, with its amphitheater of hills, we were met by the city council, officers of the road, and others, and escorted in procession, accompanied by a fine band of music, to Masonic Hall where a reception address was pronounced by J. G. Sill, Esq., welcoming their guests from abroad, which was eloquently responded to by W. Eggleston, Esq., of our city council, on behalf of the Cincinnati delegation. An abundant cold collation was then served to refresh the inner man; after which the invited guests were taken in carriages to the County Fair, in the outskirts of the city upon the west. These Fair Grounds are most admirably selected, having a beautiful piece of level land upon which is the ring for equestrian exercises, the exhibition of stock, etc., all of which is immediately overlooked by a hill, the sides of which, on the occasion of our visit, were lined with ladies and children, whose gay and parti-colored dresses presented a gorgeous sight as, amphitheater-like, they sat in groups awaiting the display of female equestrianism, with which the fair was about to close. With much interest we watched the horsemanship of some twelve ladies, some of whom displayed remarkable skill in the management of their steeds; but we must confess that the horses, with one exception, did not come up to our preconceived idea of what ladies' riding horses should be, But to the railroad celebration.

From the fair grounds we assembled at the Masonic Hall again, and in procession marched to the Clinton House, and soon found ourselves seated at table where every variety of edible abounded in the greatest profusion, and in elegant style. After the substantials had been discussed amid the popping of a few corks, came the toasts, speeches, etc.; and we must say that it has never been our lot to listen to so many extempore speeches upon a single subject, where the speakers acquitted themselves so well. Though it may seem invidious to make distinctions where all did well, yet we are constrained to say that the few remarks made by S. B. Keys. Esq., president of the Hillsboro' company, and called out by a toast in which that road was named, and the reply to it by Hon. John L. Taylor, M. C., were emphatically the railroad speeches of the evening. Nor can we omit the just meed of praise due to the judicious and well chosen remarks of the Rev. Mr. Findley, called out by a toast to the clergy; it is so difficult in such cases, to avoid saying too much or too little.

There were nine regular toasts, and numerous volunteers. Owing to indisposition, we did not remain till the close; but we learn that everything was conducted in the most orderly and harmonious manner, unmarked by any of the excesses so common on such occasions.

The preparations for the reception and enjoyment of guests, were of the most ample kind; reaching even to the finding accommodations for the night—a somewhat difficult task, owing to the fact that the county fair had drawn hundreds of visitors also.

It was our good fortune to fall into the hands of S. W. Ely, Esq., the efficient secretary of the company, who took us to his own domicil, in company with two other guests, where himself and lady did the honors of the house in a manner that at once made us at home—their kindness will long be remembered.

We regretted exceedingly that our senior, Mr. Mansfield, was not present on the occasion, as we confidently expected he would have been. This spot is endeared to him by many early associations, and from his pen would have flowed a description of this interesting occasion, much more graphic and and abounding with reminiscences of the olden time, when Chillicothe was *the* city of the West.

This road has labored under very many and trying difficulties, but it has gone on unwaveringly, until it has succeeded in opening this immense valley to our market, and it is the earnest intention of the present board to reach the coal deposit this winter, some 35 miles east; of which 27 are now graded and ready for the rails; a portion of which have already arrived; so we may look for coal over this road before the close of winter. Upward of $1,200,000 have been paid out upon this line during the last year; by the means of which the road has been so far advanced as to secure beyond a contingency the completion of the entire line to Wheeling in less than two years.

In the course of the remarks made by Hon. John Taylor, he spoke of a recent visit to Germany, where, in negotiating a small bill of exchange, he found the bonds of this company to the amount of $100,000, that day purchased by the banker as a permanent investment. Such is the confidence abroad in the bonds of Ohio, whether state or railroad, "*because, whether under Democratic or Whig rule, she always paid her debts.*" Long may Ohio deserve and enjoy this reputation at home or abroad.

Now a few words as to the road, and we have done.

The road from Blanchester, the intersection of the Hillsboro' road, to Chillicothe, is 53 miles in length, and is admirably laid out over a succession of hills and valleys, having deep cuts and heavy fills, with long grades and few curves. It is laid with the continuous, or compound rail, in the most substantial manner, and when once settled, and properly ballasted, will be one of the pleasantest riding roads in the world, as it will be the shortest and most direct between Cincinnati and any of the Eastern cities. And when the immense amount of heavy work done on this line, and the difficulties which have had to be contended with thus far, are considered, we feel that the board of directors deserve the thanks of the stockholders, and the community at large, for the Herculean labor they have thus far so successfully achieved, and we trust that their hearts will be cheered by liberal subscriptions to aid in the early completion of the road.

RAILROAD MAP OF THE UNITED STATES.

The great number of railroads in the United States, completed, constructed and proposed, can scarcely be comprehended by even those closely connected with the railroad interest. There is scarcely a section of the Union which does not boast of its railroad, either finished or in prospect, and yet there is not in the country a map showing even the completed and constructing roads correctly.

We are pleased to know that Messrs. Middleton, Wallace & Co., Lithographers, of our city, have in progress a fine large map of the whole Union, with every line that can be heard of, located by the best authority to be had, and exhibiting the state of progress from those merely proposed, to those in full operation, with the names of stations, distances, etc. Such a map has been much needed, and will doubtless find a ready sale among railroad men, and others interested in railroad interests. It will be completed about the beginning of the ensuing year. We commend it to the attention of our readers.

Communications.

THE BLACK BAND IRON ORE.

We noticed,a few weeks since,the existence of the celebrated Black Band Iron Ore in Mahoning county, Ohio. The value of this article is so great that it has excited considerable attention. We are glad to see, by the following letter from Mr. Wellman, of Massilon, that this valuable ore is also found in the valley of the Tuscarawas, in the counties of Tuscarawas and Stark. The immense amount of the best varieties of iron and coal is likely to make Ohio a great manufacturing state:

Massilon, Ohio, Sept. 18, '54.

Editor Railroad Record: Dear Sir—The "*Black Band*" Iron Ore described in the 81st number of your journal, is found in abundance in the valley of the Tuscarawas river, and has been used to great profit and advantage in the furnace of the Massilon Iron Company of this place, since April last.

The Black Band found in this locality is considered by furnace men as superior to any hitherto discovered in this country, as working more kindly in connection with other ores.

In addition to this variety of ore we have the Shell or Kidney,, and the Mountain ores, both of which are of the highest value, and in unlimited supply. Stone coal, adapted in its raw state to the smelting of iron ore, is also found in large quantities, for miles along the valley of Newman's creek, near this place.

These facts have been abundantly proved by the successful experience of the above-named iron company, who are now manufacturing from 120 to 140 tons per week of a superior quality of pig metal—all from one furnace with single stack. Other furnaces, to be followed by rolling mills, are now in progress of erection here.

In conclusion, I would observe that no part of the country offers to manufacturers of iron stronger inducements than the town of Massilon, Stark county, Ohio.

Gold Pens.—We are indebted to Mr. A. G. Bagley, of New York City, for one of his superior gold pens. Mr. B. has had long experience in the manufacture of these useful articles, being one among the first makers of them in the United States. "Bagley's pens" have always been considered among the best. The shape of the one now sent us, pleases us more than any we ever before used, resembling, both in form and flexibility the old-fashioned quill, and writing quite as easily. These pens can be had at any of our stationers or jewelers.

Cincinnati & Chicago Railroad.—The report of this company came to hand too late for notice in this issue.

HOW THEY MANAGE RAILROAD TRAVELERS IN FRANCE.

Dick Tinto writes to the *Times* as follows:

The small railroads around Paris are adding a new precaution and a new formality to the already long list. At each station the tracks are bordered with an elevated platform, called a quay, and passengers can only enter a car from this quay. One of the most serious offences a traveler can commit, is to offer to get in from the other side. It is therefore necessary that the passengers be upon the quay upon the arrival of the train. When the ticket offices were built the trains kept to the left, and they were located accordingly. A recent change compels the trains to keep to the right, and passengers therefore must cross the track from the office to the quay. This the Minister of Public Works cannot allow for a moment, and the companies have been notified that they must either put their ticket office on the proper side of the track, or must build a bridge across. The Companies have chosen the latter alternative. A passenger may then cross the bridge even after a train has come to a stop. Formerly no crossing upon the track was permitted after the engine had whistled. The belated traveler was then shut into an infenced enclosure, from which he saw the train slacken and stop, tne passengers on the lucky side get in, and the baggage stowed into the crate. He heard the signal given for departure, and saw a new momentum acquired. The gate was then unlocked, and he was permitted to retire from uff the railroad property. The next time he took care to be a minute before the time, and not ten seconds behind it. On one occasion I saw a man thus enclosed by a diminutive picket-fence, make up his mind that he would not submit to such petty tyranny. The train stopped; he straddled over the fence, rushed at a door upon the wrong side, of course—opened it gently, and was in, in a jiffy. But the guardian of the station had seen the operation, glibly though it had been executed, and immediately gave the alarm. "A man with a straw hat has straddled!" The six conductors of the train at once set to work to discover the guilty intruder. The man with a straw hat was found and immediately ejected. "That'll teach you not to straddle another time!" said the head conductor. "To-morrow you'll be here in season" said the second conductor. The man with a straw hat on was so angry he could not speak. There was no help for it, so he waited for the next train, which came along in an hour afterwards. Hereafter, by means of the bridge, he may be late if he likes, and yet be able to gain the quay before the engine is off again.

The same day another instance of the strictness of the regulations fell under my observation. The train was approaching Paris, when a signal stop arrested it at the suburban town of Botignolles. A passenger who dwelt at Botignolles, was glad to sieze the opportunity to get out and strike across the fields to his home. Get out he did, and was on the poitn of jumping over thn pickets which separated the railroad from the property along side, when he was seized by the conductors—"you can't get out here, my man!" "Why not? I live here!" "This is not a stopping place, Sir, so get in again, if you please." "Well, I never saw the like, by the mother of God." And in again he got. The reason of this procedure was, that the gentleman had a ticket bearing the words, Chartres to Paris, and, consequently, he must go to Paris. Were he to leave the train at an irregular point, where there was no receiver to take back his ticket, the books at the two ends of the line would not balance. So many tickets sold, and one less returned. These instances are certainly abuses and exaggerations of method and system, and are only to be mentioned as exceptions. As a whole, the organization of the service of a railroad in France is perfect. Not one sou in a year does a company lose through dishonesty of its employees, for the reason that dishonesty is impossible.

Railroad Water Works.—The Cleveland and Pittsburgh railroad company have just completed water works for supplying from the lake their extensive depot and machine shops on St. Clair street. They have erected a neat and convenient building, in which is placed a steam engine and one of Worthington's New York patent hydraulic pumps, which throws a stream of water 3½ inches in diameter through a pipe 900 feet, elevating it 82 feet. The pump is a very ingenious contrivance, simple in its construction and operation, forcing the water up at each forward and backward motion of the piston, which works without a crank. But little power is required to keep the pamp going, which throws a steady 3½ inch stream from the nozzle of the pipe. By running it a few hours daily, the water tanks of the depot and shops are kept full, and an abundance of water is furnished for locomotive and other purposes.

During the past dry season the springs and streams relied on for supplying the depot and shops have nearly failed, and the improvement just completed will prove a valuable one to the enterprising company and the growing portion of the city in which their works are located. We understand the company intend to supply a fountain in the extensive Case Gardens.—*Clev. Herald.*

Useful Invention.—The enormous quantities of scoria cast aside daily, from the blast furnaces of the iron works of the South Wales coal fields, are, it appears, about to be turned to a good and useful account, by the ingenuity of Dr. Smith, of Philadelphia.—This gentleman, with a staff of assistant chemists, had, for some time been stopping at Merthyr, with a view of experimenting upon the blast furnace scoria, with the ultimate object of producing therefrom a variety of articles in daily use, such as square tiles, paving flags, bottles and utensils in ordinary domestic use, and we are glad to state, that in thus converting the furnace cinder, Dr. Smith has been very successful. The bottles thus made are much tougher and the anuealment is more perfect than in the common glass ones, from which, in their appearance, the new bottles can not be distinguished. It is a most important invention and has been taken up by Lady Charlotte Guest, and others interested in the iron works. Huge heaps, containing thousands upon thousands of tons of furnace cinders, have been deposited.—*London Sun.*

Preservation of Woon.—A preparation has been invented for the preservation of submerged timber, consisting of asphaltum, sulphur and arsenic. It is applied like a paint, when the wood is dry. A marine railway in California, to which it was applied, remains perfectly sound; while timber of the same species by its side has twice required renewal.

RAILROAD CONVENTION.

The Chicago *Journal* says that a railroad convention met in that city on the 28th of August. The Illinois Central, Chicago & Mississippi, Michigan Central N. A. & Salem, Galena & Chicago, Chicago & Rock Island, Chicago & Aurora, and Illinois & Wisconsin roads were represented.

Resolutions were passed.

1st. In favor of abolishing the system of free passes.

2d. Against issuing annual or general passes.

3d. No letters of introduction to be given entitling any person to the courtesy of a free pass.

4th. Discontinuing half-fare passes to clergymen, except such as reside on the line of roads.

5th. To carry no delegates to convention at half-fare except to religious, educational, or agricultural conventions.

6th. To charge half-fare for children between 4 and 12 years of age—all over 12 full fare.

A committee was also appointed to arrange the classification of freight, and a resolution passed "that in all cases where roads cross each other at grade, all engines shall be brought to a full stop before entering upon such crossing, and shall not stir until the conductor gives the proper signal for it to do so."

So far so good. Now let publishers of newspapers and editors assert and maintain their rights in relation to railroad companies. Let them be treated as others who desire favor from newspapers, and the use of the press to make business for their roads. Every statement calculated to benefit a railroad company should now be charged as an advertisement. Who of our brethren will agree with this suggestion?—*Dubuque Herald.*

GALVESTON & RED RIVER RAILROAD.

The state of Texas has gone into internal improvements upon an extensive scale. The Galveston & Red river road is the extension into Texas of the Fulton & Cairo road thro' Arkansas, and runs nearly north and south through the state. The following estimate of the first seventy miles of the road, from Houston north to Navasota, by J. W. P. Lewis, C. E., will give some idea of the cost of railroad construction in that state. It is due to Mr. Theodore Kosse, to state that the survey from which Capt. Lewis' estimate is derived, was made by him, and the calculations are in accordance therewith. Capt. Lewis' report appears in a pamphlet published by Mr. Bremond, in New York City:

ESTIMATE OF THE CHIEF ENGINEER.

GALVESTON, Feb. 25, 1854.

Sir: I beg leave to submit herewith my estimate for the construction of the first 70 miles of the Galveston and Red river railroad, commencing at Houston, extending thence west to the Post Oak Ridge, forming the east bank of the Brazos river, thence northward upon the crest of this ridge, to the Navasota river. My estimate is based upon the careful and minute surveys of your resident engineer, Mr. Kosse, so far as the grading and bridging the line is concerned, while for the cost of the superstructure and rolling stock, I have been guided by personal experience, and the bids of several contractors who have offered for the work.

The remarkable facility for grading with the absence of costly bridging on the first 50 miles of the line, bring the cost per mile to a very low figure—the heaviest grade in this distance being but 12 feet per mile, and that for less than two miles, while the general average grade is less than 7 feet per mile.

The grading of the first 20 miles, which has been accomplished under the direction of Mr. Kosse, afforded me practical proof of the economy with which this important part of the work might be executed; the small sum $21,565, only having been expended for this length of road bed, with broad, shallow and well made ditches on both sides—leaving to be completed on the line, two small wooden bridges for crossing Big and Little Cypress creeks. The ties of white and post oak, are offered to be furnished and laid at the price named, by highly respectable and responsible parties. I have added to the items of my previous estimate for rails and rolling stock, a percentage corresponding to the recent advance in iron and labor. In no part of the Union have I ever seen an easier country for grading and draining, while the facilities of transportation for iron and other materials by steamboat from Galveston to the wharf at Houston, renders the estimate for these a very safe one.

Very respectfully,
Your obedient servant,
J. W. P. LEWIS, Ch'f Eng.
Galveston & Red River Railroad.

To P. BREMOND, Esq.,
Pres't Galveston & Red River Railroad.

Estimate for constructing and furnishing 70 miles of Railroad, extending from the city of Houston, Texas, to the Navasota river, a branch of the Brazos river—viz:

For grubbing, clearing, ditches, embankments, bridges and culverts on 70 miles, at $3,050 per mile	$213,500
For 6580 tons rails, 60 lbs. per yard at $75 per ton	493,500
For furnishing and laying ties, sleepers, etc., at $2,000 per mile	140,000
For laying 70 miles of rails, at $500 per mile	35,000
For erecting two depots, a machine shop, tanks, sheds, and sidings	50,000
For 5 locomotives, at $10,000 each	50,000
For 6 passenger cars, at $3,000 each	18,000
For 20 freight cars, at $1,000 each	20,000
For 10 platform cars, at $500 each	5,000
For 10 cattle cars, at $700 each	7,000
For engineering and office expenses	15,000
For contingent expenses, at 15 per cent	157,050
	$1,204,050

J. W. P. LEWIS Ch'f Engineer,
Galveston & Red River Railroad.

TERRE HAUTE & RICHMOND RAILROAD: EARNINGS.—We are indebted to the attention of Chas. Wood, Esq. Sec'y, for the following statement of Earnings of this road, viz:

August 1854	$20,483,86
" 1853	15,425,83
Increase	$5,058,03
September 1854	$22,239,87
" 1853	16,293,13
Increase	$5,946,74

ALABAMA & FLORIDA RAILROAD—MONTGOMERY TO PENSACOLA.—Maj. Chase, it appears, has made a contract at the North, subject to the ratification of his board of directors, for the construction of the Florida portion of this road, 42 miles. No particulars given as to the terms of the contract. If this contract be a good one, we should think this road might now go ahead.

CAIRO AND FULTON RAILROAD.

We perceive from a discussion going on in the Arkansas journals, that the President of this road, Roswell Beebe, has been detected in illegally using the Internal Improvement fund of Pulaski County. He was County Commissioner, as well as President of the road, and in disregard of law, and the rules and regulations therein provided, took the money out of the commissioner's pocket to put into the President's wallet, and has been ever since using it to defray the expenses of his very toploftical efforts to puff himself and road into importance in the popular estimation. We have, ourselves, seen sundry manifestoes which were doubtless printed and paid for out of the Internal Improvement fund of Pulaski county, thus illegally appropriated by Mr. Beebe.—*Memphis Eagle.*

This and similar instances of dishonesty in persons enjoying the confidence of the community, it is which has such injurious effects upon the railroad interest, by weakening confidence in the managers of roads; capitalists will not invest their means where they have not entire confidence that it will not be squandered, or themselves cheated out of it. Great care should be exercised in the selection of men for such important trusts; especially when large amounts of means are to be handled. There seems something in the unlimited control of other people's money that has a bad effect upon some characters, otherwise perfectly honest; and another curious fact in connection with this is, that in many instances a company of men, as a company, will do things that as individuals they would be heartly ashamed of; such is human nature.

CINCINNATI, PERU & CHICAGO RAILROAD.—The Directors of the Cincinnati, Peru and Chicago railroad held a session last week at Laporte, at which, we understand, three or four wealthy men, were, by order of the board admitted as co-contractors with Messrs. Tyner and French and a new contract was made. Among the contractors we learn are D. G. Rose, J. C. James and W. J. Walker, who have means sufficient at their command to prepare the entire line for the iron. We understand that they have already put a strong force of hands on the road between Laporte and Plymouth and have given every evidence necessary that the work will be vigorously prosecuted.

We are truly glad this arrangement has been made, for indications were manifesty revealing themselves that without a change made the road must have been temporarily abandoned, and put off until money matters assumed a different phase. But these, at the moment necessary, stepped forward. We feel inspired with a new confidence that the work will, under their supervision, be vigorously prosecuted to a successful termination.—*Rochester Flag*

ILLINOIS CENTRAL RAILROAD.—The New York *Tribune* says:

"Mr. I. Newton Perkins has been elected President of the Illinois Central railroad company. Mr. Perkins is a very valuable accession to the management of this company.

THE RAILROADS IN GREAT BRITAIN.

The growth of railroads in Great Britain has been spadmodic. From the year 1843. when there were 2,036 miles in operation, to 1848—a period of five years—the increase was exceedingly rapid. A railway fever was in existence during all this period. Workmen were engaged by hundred and thousands, in the three Kingdoms. Iron was in demand. Rails were laid down with marvelous celerity. Locomotives were never seen before; travelers exchanged the coach for the cars; speculators, investing heavily, lost heavily; and in 1849 the mania decreased.

The following figures, drawn from the report before us, exhibit the progress of the inflation and collapse:

Opened in	1844	204	Miles
" "	1845	296	"
" "	1846	606	"
" "	1847	803	"
" "	1848	1,182	"
" "	1849	869	"
" "	1850	625	"
" "	1851	269	"
" "	1852	446	"
" "	1853	350	"
Total, 10 years		5,650	"
Opened previous to 1844		2,036	"
Aggregate to December, 1853		7,686	"

We see here a total length of upward of 7,600 miles now in active operation. The division of the lines among the three Kingdoms is found to be as follows: In England, 5,848 miles; Scotland, 995; Ireland, 843. Of the railways opened during 1853, twenty-five portions, representing a total length of 298 miles, consisted of a single line; and it would appear that the length of single line open at the end of 1853, viz: 1,708 miles—was between one-fourth and one-fifth of the whole amount of railway open.

The amount of capital invested in railways at the end of 1853, is estimated at £281,000,000, ($1,400,000,000,)—against £264,165,680 in 1852. Of present investments, it is calculated that £42,000,000 is preferential capital, and £70,000,000 borrowed on the security of the roads.

The total number of passengers conveyed on British railways in 1853 was upwards of One Hundred and Two Millions (102,286,660). The aggregate receipts from all sources of traffic were £18,035,879. The passenger lists show an increase over the previous year of upward of Thirteen Millions. The freight increased by the respectable figures of Twenty-three Millions of pounds sterling. The steady progress of the goods traffic is an important feature of these railways; one upon which Mr. Bull loudly prides himself, and that with justice. The receipts from goods have increased from the rate of a thousand pounds per mile in 1849, to fourteen hundred pounds (sterling) per mile in 1853. This ,it is to be considered, is in England alone, while Scotland shows figures correspondingly attractive. In the latter country the third class traffic preponderates.

With regard to railroad casualties, it appears that of one hundred Millions of passengers conveyed in England, Ireland and Scotland, 305, were killed and 449 injured—making a total of 754; and that of this number not less than 243 were killed and 369 injured in England alone.

Manassas Gap Railroad.—The Manassas Gap railroad was opened to Front Royal, Warren county, Va. on Saturday, by a train of cars containing the officers and invited guests.

THE VICTORIA TUBULAR BRIDGE OVER THE ST. LAWRENCE, TWO MILES LONG.

The Victoria Bridge over the St. Lawrence will certainly be the most remarkable work of the kind in the Canadas—we might say in the whole world. It reminds us of some of the old Roman works, such as the ancient aqueducts which span the valleys of Italy, in their grand gigantic proportions, more than of an ordinary bridge over a river. We know of nothing on the continent of America—nothing on the continent of Europe—which approaches this work in the grandeur and greatness of its design.

The Victoria Bridge will be constructed on twenty-four piers, with spans or spaces, for the navigation, exclusive of the two abutments from whence the tubes spring on either side. The center space or span, will be 300 feet wide, and each of the other twenty-four spans will be 220 feet wide. The width of the two piers nearest to each abutment will be fifteen feet, and as the piers approach the center span, the width and strength of each will be increased until they reach the two center piers, when it will amount to 18 feet.

The abutments from which the tubes spring will be each of them 242 feet long and 90 feet wide, and from the north shore of the St. Lawrence to the north abutment, there will be a solid stone embankment of rough masonry, 1,200 feet in length, raised like an artificial rock to resist the current. The stone embankment leading from the south shore of the river to the south abutment will be half this length, or 660 feet. The length of the bridge itself, from abutment to abutment, and its total length from river bank to river bank, will be 10,284 feet, or about fifty yards less than two English miles.

The clear distance between the under surface of the centre tube, and the average summer level of the river is to be sixty feet, and the hight will diminish towards either side with a grade at the rate of 2 in 130 or 140 feet in the mile; so that at the outer or river edge of each abutment, the hight will be 36 feet above the summer level.

On the 24th of July last, the first stone in the bed of the river was raised for the construction of the first pier of the bridge, and now, on the 14th of September, "pier no 1" has arisen several feet above the level of the river, and the process of binding the blocks may be seen and understood. Each stone of the structure is clamped to its fellow by bands of iron, and the interstices are filled with molten lead and the strongest Roman cement. The result will be, the construction of masonry as durable as that of the Coliseum or the Appian ways, which have withstood the wear and tear of time and traffic of more than 2000 years, and which will continue to exist as monuments of the skill and industry of man

Unless unforeseen difficultie arise, the first railway train will pass over the broad St. Lawrence by the summer of 1858. The commercial advantages will consist in the fact, that the Victoria Bridge will bring into direct communication, without break of gauge or bulk, the exhaustless products of Canada West, and of Michigan, Illinois, Iowa, Wisconsin, and all the Western States of the Union.

The Collossus of Rhodes, under which the pigmy shallops of former ages could pass, was esteemed one of the wonders of the Old World. But an iron bridge, spanning a river two miles in width, giving safe passage to the hundred of tons weight between its iron sides, and permitting ships of the largest tonnage to pass beneath its elevated arches, is an achievement still more remarkable for the the New World, and is worthy of the young giant rising in the West.—*Montreal Pilot.*

Railroads in France.—From a letter dated Aug. 21st, of the clever Paris correspondent of the N. York *Times*, we extract the following:

"The railroads had a queer time with the transportation of the troops to the port of embarkment. The road to Lyons underwent a regular military educetion: not only had the soldiers to conform to the methodical regulations of the companies, but the emplyees of the lines had to make special arrangements for the reception and landing of bodies of men who only move by manuvres and proceed by regular processes of drill. The first battalion sent off, consisting of 1,000 men, were three quarters of an hour getting into the train prepared for them, and nearly deranged the whole service for the day. This was becanse they were left to choose their own seats and had abandoned the word of command. This would not do at all, and ever after, a battalion to depart, spent the day before in rebearsing. It was furnished with a train of the proper size in an out-of-the-way part of the station, and took it by assault at the roll of the drum The time was redneed to twelve minutes.—The Northern railroad transported 40,000 soldiers in five weeks,—more than a thousand a day; every military train was an extra, and yet the usual play of the trains out and in was uninterrupted, and no accident occurred.

A New Kind of Brick.—We were shown yesterday an entirely new material for the construction of buildings. It is a preparation of sand and lime put into moulds, and operated upon with a most powerful press. The specimens we saw had about three times the superficial area of a common brick, though of course their size would depend upon the pleasure of the maker. They are made with an open space in the center occupying one-half the length, and about one third the breath of the brick. Those we saw were a handsome gray color, as smooth as dressed stone could be, and apparantly as solid as granite. Their real solidity was about equal to a good burnt brick, though they had been made but about three weeks, and time and exposure is expected to barden them continually. They can be furnished as cheaply as brick, and unless some difficulty is developed with regard to them not now apparent, it seems to us they must come into active demand for building purposes. They would certainly appear as beautiful as the finest stone, and making, as they do, a hollow wall, with a smooth interior surface, they can be papered against, or painted or whitewashed, without the necessity of lathing and plastering.—*Kenosha (Wis.) Telegraph.*

Locomotive Sunk.—An enormous locomotive, with six five-feet drivers, and weighing 30 tons, intended for the Virginia and Tennessee railroad, while being transferred from a vessel to a canal boat in the James River, Va., at Rocketts, on Monday, Sept. 18, fell from the huge timbers used to sustain it, and sunk to the bottom, carrying the boat with it. The cost of it was over $90,000.

MONETARY.

From our Eastern advices we gather that the Money Market has become more stringent, and rates of interest have, in consequence, advanced; this is accounted for by the fact that the first and the fourth of October, are usually heavy payment days. The supply of mercantile paper in the street is not large; and number-one business securities rate at 10@12 per cent. Call loans can be readily had at 6@7 per cent.

The failure of Reed & Brothers, an old and heavy house of Philadelphia, for about $1,000,000, a large portion of which falls upon New York, has aided in bringing about this stringency.

The Stock Market has been heavy and dull, closing with a partial decline in prices, which is attributable, in a degree, to the desire of all parties to realize on the recent rise. The market is firm, though quiet. Stock securities are in greater favor, and command money much more readily than beretofore.

The transactions of the week have been limited.

The sales of Stock at auction have been as follows:

By A. H. Nicolay, 5th inst.—

2	$1,000 Bonds, and 1 of $500; Canandaigua & Elmira R.R., 3d mort. 7s., 1863; per hond	10 00

190	" Michigan Central	"	88¼@89½
New York Central		"	90¼@92½
New York & Erie we quote from			42@45½

For a report of the Cincinnati Money Market, we take the following from the *Price Current*, as embracing all the facts of the case:—

Money matters are in an extremely unsatisfactory condition—more so, we believe, than has been experienced for many years. The Banking houses have ceased almost entirely to extend accommodations, and this from necessity, and not from any want of confidence in the paper offered. There are several causes to which this state of things is attributable, but the small-note law and the Indiana Free Banks have been chiefly instrumental in driving out the currency, and depriving our business men of the means of carrying on their operations. The small-note law received no attention out of doors, but as soon as the illegal currency got into Bank it was sent home; and as the greater portion of the latter belonged to Indiana, the run upon the Free Banks was simultaneous and heavy—and most of them, we understand, failed to respond to the calls made upon them. Thus a large amount of the active means of our bankers is locked up. Free Bank currency has been almost entirely withdrawn, and what little is still in the market can neither be passed in trade nor sold to the Brokers. Ohio Banks have put out their paper as fast as possible, or prudent, but this, compared with our wants, is only as a drop in the bucket. Kentucky Banks, the State Bank of Indiana, and Eastern Banks, are not disposed to supply the demand for currency. Their small notes could not be kept out, because of our law, and the large notes would be so convenient for remittances that they would be returned about as fast as issued; the gold and silver that was to flow in to take the place of the small notes of foreign Banks, is not to be seen; and thus we are without a circulating medium.

The Indiana Free Banks attribute the difficulties to the Cincinnati Brokers, but whatever may have been the cause, the fact that these banks are generally unable to redeem their paper, and that they will be forced to wind up, is quite apparent.

There are several houses here that make a business of assorting currency and returning it for redemption; and the facilities for reaching Ohio and Indiana Banks are such, that it is impossible for these institutions to keep out their paper. This is a matter which is now beginning to attract the attention of business-men, and steps will be taken, we presume, to remedy the evil as far as possible. And the final movement will be to transfer deposites from houses who make "assorting" their chief business. The fact that we are getting too many banking-houses, is becoming quite apparent, and the people are beginning to find out that there is a difference between bankers and capitalists; and that the former does not necessarily, or even generally, imply the latter.

The rates of interest vary from 2 to 3 per cent. per month. The demand for money is not large, but, as already intimated, it greatly exceeds the supply.

Owing to the scarcity of currency Eastern Exchange has materially declined, and yesterday the buying rate was ¼@½ premium, and the selling rate ¾.

Consequent upon the deranged state of Money affairs, there is but little activity in the Stock Market, though we still continue to quote Stocks as buoyant, yet checked by the stringency in the Money market.

GLASS ENAMELED WROUGHT-IRON WARE.

We have on several occasions noticed improved methods of coating iron with glass, or enamel, for the fabrication of domestic utensils, combining all the properties of porcelain or other earthen ware, with greater strength and durability; and among these is one patented by Mr. Paris, producing articles of a very superior description, the sole agents for the sale of which are Messrs. Robinson, Langton, and Company, Talbot-court, Gracechurch-street. It will be remembered that in the earlier periods of the manufacture of glazed iron ware, the enamel was of an opake white, for the securing a proper consistency to which, and to cause an intimate and adhesive contact with the metal, the white oxide of arsenic was largely employed, which, on the composition becoming decomposed by heat and wear, was exceedingly dangerous to human life, and at all times deleterious to health. The material under notice is covered with a pure transparent colorless glass, or colored in any design, without the slightest admixture of any deleterious ingredients.

They are made from sheet-iron of various thicknesses, according to the article to which the manufacture is applied, combining great durability with wholesome cleanliness and elegant appearance. They will stand any amount of heat, and are as readily cleaned as china, crockery and glass, and can be thrown about or dropped from any hight without fear of breakage, and their adaptation to ships' use and for emigrants is thus obvious. Some of the first constructed articles of this description were heavy, and of clumsy, cumbersome appearance, but these being made of sheet-iron are pressed at once into form, and the smaller articles, such as cups and saucers, dinner plates, drinking mugs, candlesticks, etc., have a light and elegant appearance. The principal articles comprise saucepans, kettles, stewpans, preserving pans, frying pans, baking and meat dishes, wash-basins, bowls, pails, buckets, color, brewing and laundry boilers, poultry fountains and troughs, gas tubing, etc., and a complete service may be obtained, which will last through the wear and tear of many voyages, or on land for a number of years. Their economy and cleanliness are remarkable.—*London Mining Jour.*

LIFE INSURANCE ON RAILROADS.—The following advertisement from an English paper shows that life and limb are rather safer on railroads there than with us:

Excursionists may secure £100 for their families in case of death by railway accident in a trip of any length, with an allowance for themselves when hurt, by taking an insurance ticket, costing *two pence*, of the excursion agent, or at the railway stations. Railway passengers' assurance office 9, Old Broad-street, London.

WILLIAM J. VIAN, Secy.

NEW RAILROAD.—A notice appears in the Yorkville S. C. Remedy, that application will be made at the next session of the Legislature of that State for a Charter to construct a railroad from Yorkville to some point on the North Carolina Line.

EXTENSION OF THE ORANGE AND ALEXANDRIA RAILROAD TO LYNCHBURG.—We learn from the Alexandria *Gazette* that the whole line of the extension to Lynchburg has been put under contract, and the construction ordered to be commenced.

SUNBURY AND ERIE RAILROAD.—The Philadelphia City Councils have appointed a special committee of that body, consisting of Messrs. P. A. Keyser, Hinman, Roberts, Stokes, and Hutchinson, to "examine the books of the Sunbury and Erie railroad Company, and report in detail the amount of money, bonds or material for the road, which have been received in payment for subscriptions, or instalments on subscriptions made to the capital stock of the said Sunbury an Erie railroad Company, together with the amount of expenditures, and the purposes for which said expenditures have been made, with such other information as they may deem proper to communicate."

THOS. M CASH,

Price, one dollar each. Postage on the Curves, five cents; on the Excavations and Embankments, eight cents. For sale by WILLIAM HAMILTON.
Hall of the Franklin Institute.
Sept. 21-3* Philadelphia, Pa.

CHARLES FRODSHAM'S

IMPROVED WATCHES!

BEGGS & SMITH,

JEWELERS,

No. 6 West Fourth St.,

Adjoining the First Presbyterian Church,

CINCINNATI, O.,

HAVE received from Mr. Simon Willard, Boston, Agent for the United States, the sole and exclusive agency for the sale of **CHARLES FRODSHAM'S** NEW SERIES OF IMPROVED CHRONOMETER WATCHES, in the states of Ohio, Indiana, Illinois, Michigan, Iowa, Wisconsin, Missouri, Kentucky and Tennessee.

In the Watches of the New Series, Mr. FRODSHAM has succeeded by a more perfect method of compensation, a more correct adjustment in isochronism, and an entirely new and peculiar construction of the train, by which more power is obtained without increase of size, in producing timekeepers of wonderful and unrivalled accuracy. The great importance of the improved watches is a perfect regularity of time under every variety of climate, motion and position. So perfect are the adjustments, that the most violent exercise, such as horseback riding, jumping, etc., produces on them no sensible effect They are therefore, particularly adapted to Railroad purposes.

Liberty is given to refer to the following gentlemen, who, among many others, have proved the excellence of Charles Frodsham's Watches as timekeepers:

Gen. John S. Tyler	.....	Massachusetts.
John E. Thayer, Esq.	.....	"
Enoch Train	.....	"
E. C. Bates,	.....	"
F. W. Thayer,	.....	"
Wm. Whiting,	.....	"
Geo. M. Thacher,	.....	"
David Dyer,	.....	"
Alvin Adams,	.....	"
Billings Briggs,	.....	"
David Weld,	.....	"
Hon. Ebenezer Lane, } E. F. Osborne, Esq. }	.....	Sandusky. Ohio.

The Prices of the New Series Gold Cases, are According to Size, viz:

SIZE 12	.....
" 14	..... $230
" 16	.....
" 18	 250
" 20	 275
" 22	 300

Recommendations:

Boston, Sept. 3, 1853.

The Compensated Lever Watch I purchased of you, made by Charles Frodsham, London, No. 7300, has varied but thirty seconds from mean time in six months, by actual daily comparison with your regulator.

Yours, &c., ALVIN ADAMS.

Mr. Simon Willard.

Boston, Feb. 4, 1854.

Mr. S. Willard Dear Sir—The Frodsham watch, No. 7557, I purchased of you last October, has performed wonderfully well. I have compared it almost daily by your Astronomical clock, and its variations for ninety days is but one second, or a loss of but one-hundredth of a second per day. I consider it better than any Marine Chronometer I ever used.

Yours truly,
FISHER A. NEWELL,
Late master of Sch., Honolulu.

Sandusky, Ohio. Jan. 1, 1854.

Mr. S. Willard, Dear Sir—More than six months ago I purchased of you two of Frodsham's best watches—up to this time, one of them, No. 7571, has altered from mean time but twenty-seven seconds, and the other, No. 7517, but twenty-three seconds in the same period.

Yours, respectfully.
E. F. OSBORNE.

To Mr. Simon Willard.

Gentlemen—On the 1st of April last I procured from Mr Willard, of Boston, one of Frodsham's improved series of watches. It was regulated and set to Cincinnati time. It has not, in that period, been suffered to run down, nor have the hands been moved, and to day it is 20 seconds only slow. Respectfully yours,

HENRY O. AMES,
Sup,t Cin. Ham. & Dayton Railroad.

August 18, 1854.

To Messrs. Beggs & Smith.

The following is an extract from a letter of William Brown, Esq., Springfield, Ohio, engineer on the M. R. & L. E. R. R., who has personally kept the rate of several of Frodsham's watches.

"Finally from what I have known of Frodsham's watches, I am very strongly impressed with the idea, that they are a decided improvement on all other timekeepers, and were they set in gimballs and used with the same care, I think their performance would equal that of Mr. Frodsham's celebrated box chronometer, and would answer the samo purpose for determiuing longitudes."

Sept. 21-0*

Notice of Copartnership.

MR. PETER MARIE, heretofore of the firm of Decoppet & Co., has this day formed a copartnership with Mr. Rudolph Kanz, (for many years with the banking house of Messrs. L. Von Hoffmon & Co.,) under the firm of MARIE & KANZ, at 27 William street. Their attention will be devoted to the purchase and sale on commission of Stocks, Bonds and Foreign Exchanges, and to the negotiation of business paper.

New York, Sept. 1, 1854. [sept. 7-1*

DENNEY'S DIVIDED CAR AXLE.

PATENTED JANUARY 31ST, 1854.

THE ATTENTION OF RAILROAD COMPANIES is respectfully invited to an examination of the merits of this valuable invention, which offers to add largely to the safety of life and property.

The valuable features of this arrangement of axle are, a saving of full fifty per cent. in motive power on crooked roads: the rails are protected from being destroyed by the flanges of the wheels coming in contact with them on the curves, as is the case with the stiff or rigid axle, which not only destroys the rail but puts a constant strain upon the wheel and axle, causing the wheel on the inner rail to trip or revolve upon the rail under the weight of the car and its load, while the opposite wheel is traversing its greater distance; the tendency of which, is to wear the wheel flat, and cause it, or the axle, to break sooner or later. There is less danger of the car leaving the track from its having become spread.

Axles fitted in this way do not require to be near so large, and yet contain more strength than the common axle, for the reason that the liberty given to the wheels, which allows them to accommodate themselves to the curvatures of the road, removes wholly the strain thrown upon the ordinary axle; and therefore, it requires no more strength of iron at any point between the wheels, than is contained in the bearings, which in the ordinary axle, is not more than one-third of the strength of the other portions of the axle.

The elongated bearing which forms the connection is so proportioned as not to wedge or become tight in the alloy, the wear being almost imperceptible, requiring to be set up not oftener than once in twelve months, by a slight tightning of the screw nuts. If, from long service, the alloy becomes worn out, it can be refilled, making it as perfect as when first filled up, and the gauge of the wheels will never become changed so as to injure the running of the car.

It is after a series of the most careful experiments, conducted through a period of time sufficient to test in the most satisfactory manner, the real merits of divided car axles, and a thorough and practical test in real service of over two years, that we now offer to Railroad Companies one that we are assured will give universal satisfaction in its operations, and both simple and cheap in its construction.

We are now ready to dispose of rights to use the above axle on the following terms: We guarantee full and perfect satisfaction by giving ample time to thoroughly test its merits, and will require no payment to be made until such satisfaction has been given. All applications to be made to

SAMUEL L. DENNEY,

Square or Rope Packing, do.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agent of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.

2d, They are a great deal cheaper.

3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations. This is a new and important invention. The coldest weather will have no effect on them whatever. They are warranted to remain as pliable, in the COLDEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils,-10 casks, assorted weights n w in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Leland's Superior C. S. Car and Auger Bitts.—All sizes.

Brass Kettles, and Sheet Brass, &c.—Brass Kettles, assorted from 6 to 30; Sheet Brass assorted from No. 0 to 30; Brass Wire, do do do.

Star Breast Chains.—Four casks of those superior double-linked Chains, just received.

Walker's Trace Chains.—70 casks of those superior goods, warranted full length and sizes, 8 to 20 links, straight and twisted, now in store.

American Anvils.—Eagle brand, faced with with cast steel, and warranted by the manufacturers equal to Armitage's Mousehole.

Plated Spoons.—Plain, tipped, and threaded heavy plate, on best quality of German Silver.

Premium Gimlet Screws.—10,000 gross just received.

Mill Saws. Hoe & Co.'s C. S. Wm. Rowland's, and W. H. Rowland's 6, 6½, 7, 7½, and 8 ft

Cross Cut Saws.—Hoe & Co.'s C. S., John ockerell's C. S. and G. S., Wm. Rowland's and W. & H. Rowland's 5, 5½, 6, 6½, 7, 7½, and 8 feet Also, 4 and 4½ feet Tennon Saws.

Axes—1000 doz. Axes, assorted Yankee and Kentucky patterns, first, second, and third quality

Nails.—4000 kegs Shoenberger's and Wheeling Nails, now in store.

For sale by TYLER DAVIDSON & CO.,
mr 3 140 and 142 Main street

NOTICE TO CONTRACTORS.

Mobile and Girard Railroad.

SEALED PROPOSALS will bo received by the undersigned at this office, until the first day of December, for the Clearing, Graduation, Track-Laying, together with the building of all Bridges and Culverts of the Western Division of the Mobile and Girard Railroad, extending from Mobile to Greenvile, covering a distance of 130 miles.

Tho work will generally be divided into one mile sections. and bids may be made for one or more of these sections. Separate proposals are desired for the Track-laying, building of Bridges and Culverts, likewise for the building of the Trestle-work, 5½ miles in length, across the Tensas and Mohile Rivers, with the interveuing swamps. The trestle-work will be 12 feet high, built upon Black Cypress Piles, found in abundance and adjacent to the line; the two rivers will be crossed with the common Pile Bridging with Truss Pivot Draw in the center of each.

Specifications with the form of the contract and proposals can be had of the undersigned upon application.

Plans, profilos and estimates of that portion of the line are now ready for examination. Parties proposing will please designate it as such upon the envelope.

The country is healthy, with no swamps after leaving the Tensas River. From Mobile to the river, 18.5 miles the grading is light and country very healthy at all seasons of the year. After the line leaves the Tensas River, it passes through, and on the ridge that divides the Alabama and Conecuh waters, easy of access by the Alabama River, and through a section of country well stocked with provisions.

Payments will be made one-third (⅓) in current funds, one-third in the capital stock of the Company, bearing (.08) per cent. interest payable in stock, until the road is completed, then to cease and become common stock of the road, and relying upon tho earnings of the same for dividends; the halance (⅓) one-third to be paid in the (.08) per cent. convertible bonds of the Company, maturing in (5) or more years, at the option of the contractors, coupons payable semi-annually either in Columbus, Ga., Mobile, Ala., or at New York, at the option of the holder.

To bidders personally unknown to the undersigned, bond and approved security will be required to an amount not exceeding (¼) tho amount of the contract, for the timely and faithful completion of the samo.

22½ miles of the road from Girard west, will be open for business the first of November, and 52 miles 9 months therefrom; it is the intention to have the entire line of 245 miles open for business early in 1858.

Baltimore & Ohio Railroad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was opened to the Ohio River in the spring of 1853, and has already established a high character with the business community of the West. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of the country through which it runs, and its many admirable provisions for the expeditious, comfort and safety of travelers, it has received such favor as a passenger road, (with its present connections,) as to show that it will become the preferred route for all portions of the West and South-West as soon as its further connections are formed by the completion of the Central Ohio, North-Western Virginia and other Railroads now rapidly finishing.

FOR PASSENGERS BY THIS ROUTE,

Through Tickets from all Parts of the West,

ARE NOW SOLD IN

Cincinnati, Louisville, Madison, Indianapolis, St. Louis, Chicago, Toledo, Detroit, Cleveland, Columbus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED

For Sending Travelers Direct to WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION

The fullest accommodations are provided. In motive power and Cars, the company has abundant resources, which are being further extended to meet the demands of Western Trade. In the dispatch and regularity of transpart, and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road connects directly in the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,

The numerous Steamers of the Parker Vein Line to New York and Boston, the Eriesson Steamers by Canal to Philadelphia and New York.

And various other Lines of Steamers and Sailing Vessels to the Eastern Ports, and to Richmond, Norfolk, Charleston, Savannah, etc.

COLUMBUS PIQUA, AND INDIANA RAILROAD.

New route from Columbus, West and from Urbana, East.

On and after Monday September 19, 1853, two trains per day, (Sunday excepted) each way, will run on this Road, between COLUMBUS and URBANA. Will leave Columbus at 4.50 a.m., and 3.30 p.m.—arriving at Urbana at 8.12 a.m., and 6.14 p.m. Returning—will leave Urbana, for Columbus, at 9.15 a.m., and 3.00 p.m.—arriving at 12.05 and 6.55 p.m.

The 4.50 a.m. train, from Columbus, will connect with the night Express train from Cleveland and arrive at Urbana in time for the morning train north for Sandusky and intermediate points. Persons arriving by the morning Cleveland and Zanesville trains can have a few hours at Columbus and leave by the 3.30 p.m. train—arriving at Urbana in time to get supper and take the 5.35 p.m. train for Dayton and Cincinnati.

The 9.15 a.m. train from Urbana connects with the morning train from Cincinnati and Dayton that arrives at Urbana 8.40 a.m.—arriving at Columbus at 12.05 p.m in time for the 1 p.m. train for Cleveland, connecting with the Buffalo and Dunkirk boats. The 3.00 p.m. train will leave Urbana on the arrival of the Sandusky train—reaching Urbana at 2.45 p.m.—and arrive in Columbus in time for the various night trains.

A line of Omnibuses will connect with the trains at Urbana for the convevence of passengers to and from Piqua and Greenville over a good Macadamized road.

A. G CONOVER, Sup
Piqua, Sept. 13, 1853. s29-tf.

Marietta & Cincinnati Railroad.

On and after Monday, the 8th of May, passenger trains will run as follows, viz:

Leave Chillicothe at 9 00 A. M.
Returning do Greenfield at 5 30 P. M.

Passengers from Cincinnati leave by Little Miami Railroad, at 7 40 A. M., dine at Hillsborough and reach Chillicothe the same Evening.

Fare from Cincinnati to Chillicothe, $3 45.

J. W. STOWELL,
Chillicothe, May 6th, '54— Sup't.

Railroad Line.

Cincinnati, Hamilton & Dayton Railroad.

Summer Arrangement.

COMMENCING WEDNESDAY, JUNE 20th, 1854.

TRAINS will run by standard time, which is seven minutes faster than that of Cincinnati.

First Train

At 6 o'clock, A. M., Lightning Express for Dayton, Crestline, Pittsburgh, Philadelphia and Baltimore.

Second Train

At 6.10 A. M., for Hamilton, Richmond, Indianapolis, Terre Haute, Lafayette and Chicago, direct.

Third Train

At 8.20 A. M., for Dayton, Sandusky, Toledo, Detroit, Chicago, Cleveland, Buffalo, New York, Boston, Pittsburgh, Philadelphia, Baltimore and Washington.

Fourth Train

At 2 P. M. for Dayton, Greenville and Union.

Fifth Train

At 3.30 P. M., for Hamilton, Richmond, Indianapolis, Terre Haute, Lafayette and Chicago.

Sixth Train

At 5 P. M., for Dayton, Troy and Piqua, and intermediate stations.

Seventh Train

At 6.30 P. M., for Hamilton and intermediate stations.

The 1st Train, Express,

Will stop only at Hamilton and Middletown.

2d, 3d, 4th, 5th and 6th Trains,

Will stop at all regular stations.

The Seventh Train

Will stop at all way and flag stations.

The 1st Train

Will connect at Crestline at 12.30 P. M., with the Ohio & Pennsylvania Train for Pittsburgh, Philadelphia, Baltimore, etc., forming a direct and continuous line for each of these cities. Cars run through to Crestline without change. Baggage checked to Pittsburgh.

2d Train

Will connect at Richmond at 9.05 A. M., with Train of Indiana Central Road for Indianapolis; arrive at that place at 12 M., thence to Terre Haute, Lafayette, or Chicago without detention. Time as short as by any other route.

3d Train

Will connect at Dayton at 10.45 A. M., with Mad River Train, and arrive at Sandusky at 4 P. M., and go immediately on board the splendid steamers **St. Lawrence** and **Mississippi**, to Buffalo; thence at 7.30 A. M., with Buffalo and N. Y. City Road, to New York; arriving at that place at 10 P. M., also at Crestline 4.20 P. M., with Ohio and Penna. Train for Pittsburgh, Philadelphia, Baltimore and Washington.

The Same Train

Will also connect at Clyde with Cleveland and Toledo Train to Toledo. Chicago and intermediate points; and at Sandusky at 5 P. M., with steamer **Bay City**, for Detroit. Also, with Dayton and Michigan Railroad to Troy and Piqua, and at Piqua with Doyle & Co's Canal Packet Line to all points on Wabash and Miami Canals.

Fourth Train

Will connect at Dayton with Dayton and Greenville Railroad to Greenville, Union, and all points on Bellefontaine and Indianapolis Railroad.

Fifth Train

Will connect at Richmond at 6.40 P. M., with Indiana Central Train for Indianapolis, Terre Haute, Lafayette.

Passengers will bear in mind that the following rates of fare, via Lake Steamers, include both Meals and Staterooms, and that the fare to Philadelphia and Baltimore is One Dollar cheaper, and one less change of cars than by the Columbus route.

E. W. WOODWARD,
Engineer and Superintendent.

☞ The Omnibus Line will call for and deliver passengers to and from the trains to any part of the City.

J. HOWELL, Conductor.

☞ The Company will not be responsible for baggage exceeding $50 in value, unless the same be returned to the Conductor or Agent, and freight paid at the rate of a passage for every $500 in value above that amount.

je.29

Covington and Lexington Railroad.

OPEN to Cyntbiana, 66 miles. Two Daily Passenger Trains.

On and after Thursday, May 25th, and until further notice, Trains will run as follows:

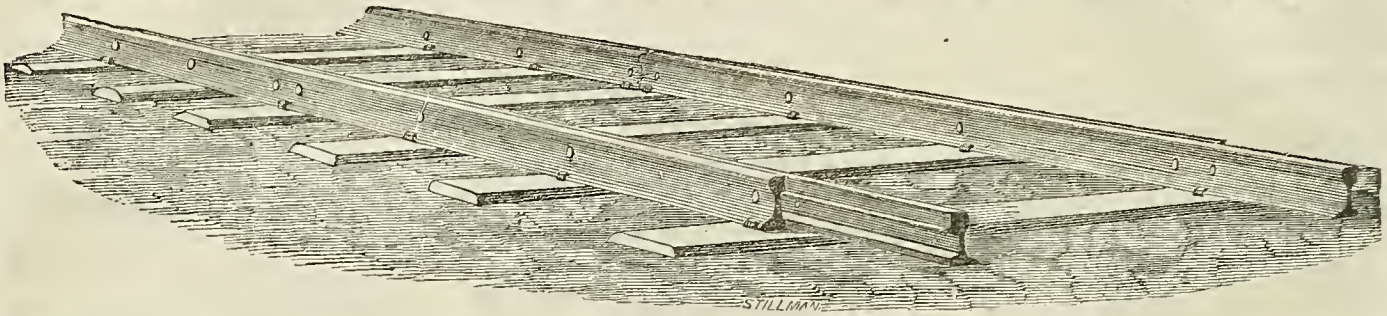
Express Train leaves Covington at 8 o'clock, A. M. stopping at Benton, Demossville, Butler, Falmouth, Callenville, Boyd's, Berry's, Robinson's and Garnett's only, and arriving at Cynthiana at 11.50 A. M. Returning, leave Cynthiana, at 1.30 P. M., stopping at the above stations, and arriving at Covington at 5.30 P. M.

Passengers for Paris and Lexington, by taking the above train, will take dinner at Cynthiana, and by Messrs. Thurston and Thompson's line of Omnibusses, will reach Paris at 4 o'clock, P. M. The Evening Train of the Maysville and Lexington Road, leaves Paris at 5 o'clock, P. M., enabling passengers by this route to reach Lexington at 6 o'clock, P. M. Returning, leave Lexington by the 7 A. M. Train of the Maysville and Lexington Road for Paris, leave Paris by Messrs Thurston & Thompson's line of Omnibusses at 8.30 A. M. arriving at Cynthiana in time for dinner, and connect with the train for Covington at 1.30, P. M., arriving at Covington at 5.30 P. M.

Accommodation Train leaves Cynthiana at 6 o'clock A. M., stopping at all regular and flag stations upon the road, and arriving at Covington at 10.10 A. M. Returning, leave Covington at 3.15 P. M., stopping as above, and arrive at Cynthiana at 7.40 P. M.

Passengers by this train can leave home in the morning, pass five hours in Covington or Cincinnati, and return home before dark.

The Express Train will stop only at the stations named. Passengers for other points must take the Accommodation train.



Freight trains, for the present, will leave Covington Mondays, Wednesdays and Fridays; leave Cynthiana Tuesdays, Thursdays and Saturdays.

Freight will be received at Covington and Cynthiana up to 4 o'clock P. M., for the train of the following morning.

J. M. DOUGHERTY,
Superintendent

Je. 20.

WINSLOW'S
PATENT COMPOUND RAIL.

THIS RAIL, which is represented by the above, has now been in use on several Roads for upwards of three years; during which time it has become established among Railroad Managers as realizing the advantages of a

THEORETICALLY PERFECT RAIL.

Its advantages over the common form of "T" Rail are—a saving in the wear and tear of Machinery—it saves, to a great extent, in the repairs of track—it secures a high rate of speed with the same power, and what is certainly of equal importance, complete protection against some of the accidents to which roads are liable Being practically a continuous Rail for the entire length of the road, without break at the ends of bars, the jarring motion communicated thereby in passing over the common 'T" Rail is avoided, as is also its effects upon Cars and Machinery. The comfort of travelers must of course be greatly increased.

This Rail is now manufactured at Hanging Rock Iron Works, upon the Ohio River, and at Mt. Savage Iron Works, Maryland. Specimens of the Rail and pattern of the same will be gladly shown, as well as information in relation thereto, given by application to

A. S. WINSLOW, Nos. 9 & 11 West Second Street, bet. Main and Walnut Sts., CINCINNATI.

KENTUCKY LOCOMOTIVE WORKS.
CORNER OF KENTUCKY AND TENTH STS.
LOUISVILLE, KY.

THE Proprietors of the Kentucky Locomotive Works would respectfully inform Railroad Companies and the public generally that, having completed their establishment, they are now prepared to receive and execute orders with fidelity and dispatch.

They will contract for

Locomotives, Passenger, Baggage, Freight, Gravel and Hand Cars,

Of every style and pattern, as well as all kinds of St and Machinery required for railroads.

Particular attention will be paid to repairing, which they have every facility.

They are also prepared to contract on favorable terms for building all kinds of Machine Tools, such as Turning Engines, Lathes, Planers, Drills, Slotting, Spliting, and Shaping Machines, of every variety of pattern.

Having also a large FOUNDRY connected with the establishment, orders for Castings are solicited, and will be filled with promptness.

Car Wheels of any pattern can be furnished on short notice. Double and single plate and Spoke Wheels of all sizes constantly on hand.

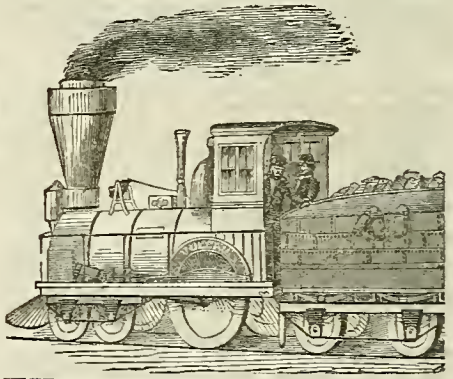
☞ Communications or orders must be addressed to OLMSTED, TENNYS & PECK,
je.8-tf Louisville, Ky.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Reservoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.



The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.

WILLIAM SHERBURNE,
PRINCIPAL AGENT,

DESCRIPTION OF PLAN.

Fig. 1, of the above cut, represents the foundations, consisting of *Bank* and *Track Walls*, the latter made of cut, the former of hammer-dressed stone, with cut stone coping. The Track is bent of the ordinary T rail, spiked and leaded to the stone track walls. The Center Pier is made of cut stone, with a step for screw and pivot bolted to the same.

Fig. 2, shows the framing.

Fig. 3, is a side view of Main Truss, with the mode of gearing, including the mitre-wheels, iron crank frame, rack and pinion, foundations, pivot wheels and pedestals.

Fig. 4, gives a perspective view of rim, segments, decking, etc.

Fig. 5, is an end view of the main trucks, with pedestals and wheels.

Fig. 6, is a screw for pivot, 6 inches in diameter, working in a steel step through a nut for adjustment.

Fig. 7, shows a cross section of track wall, well, and pedestal

"GARDNER'S ROCK DRILL."

DESIGNED for Mining, Tunneling, Quarrying Use, and Rock Excavations of all descriptions, by the use of which a saving of 50 to 75 per cent. is made. This drill can be operated by hand, horse, or steam power, and works equally as well horizontally or at any angle, as perpendicularly.

A silver medal, the highest prize, was awarded these Machines at the World's Fair.

Applications for Territorial Rights and Machines must be made to the Patentee.

G. ARTHUR GARDNER,
Trinity Building, N. York.

CINCINNATI:

THURSDAY MORNING,.....OCT. 19, 1854.

To our Patrons.

Those of our patrons, whose subscriptions are due, and have not been sent, will find their bills enclosed in the issue of this week. We shall be much obliged for early remittances.

REMOVAL.

The Office of the RAILROAD RECORD has been removed to No. **106** West Fourth St., north side, between Vine and Race streets, in the building occupied by the Cincinnati & Cleveland Short Line, the Cincinnati, Lebanon and Xenia, and the Cincinnati & Dayton Short Line Railroad Companies.

The location is in the very center of Railroad business, and but few steps from the Burnet House. Full files of railroad reports, maps, newspapers and other documents can always be found at this office, and it will always afford us great pleasure to give any information, and answer any queries on railroad matters, when in our power. We cordially invite railroad men from the country, when visiting our city, to honor us with a call and avail themselves of the facilities of our office.

☞ **Orders for all kinds of Railroad Printing received and promptly attended to at the Office, No. 106 West Fourth Street.**

Railroad Printing.

WE have now ottached to this office an extensive **Composition** and **Press Room** and **Bindery**, under the personal supervision of the proprietors of the RECORD. With confidence, therefore, we call the attention of RAILROAD OFFICERS and others to our extensive establishment, containing every facility for turning out superior work in any and every department of the PRINTING BUSINESS.

We are fully prepared to furnish **Railroad** and other **Reports**, with or without **Maps** or other **Illustrations**, gotten up at short notice and in superior style. Also, **Blanks of any description**, adapted to the wants of the various departments of the **Railroad service**, and to the wishes and tastes of the parties.

Also, **Railroad Tickets** and **Conductors' Checks**. Our patent **Card Press**, enables us to supply any demand at **Short Notice** and in **Unequalled Style**.

Also, **Blank Books**, ruled to any pattern, with or without **Printed Headings**, and bound in the most substantial manner.

With the numerous facilities for doing the **Best Work**, we feel no hesitancy in promising full satisfaction to all who may favor us with their orders.

T. WRIGHTSON & CO.,
Rail Road Record Office, 167 Walnut st. Cin.

THE EXTENSION OF TRADE BY RAILWAY.

We recently heard one of the wiseacres of the times say, that railways were the great cause of the scarcity, and derangement of money! A country, which is paying forty millions per annum in gold, for the *balances* only, due for foreign fabrics, as easily made in this country as corn is raised, suffering from too many railways!

The idea is too absurd for contradiction. But it did occur to us, what would have been the condition of Cincinnati, for example, *at this time without railways?* Under the miserable legislation we have had, with the present financial crisis, Cincinnati, and all other large towns in Ohio, would have been commercially crushed—literally trodden down. But, on the contrary, with utter derangement in currency, and with the Ohio river reduced almost to a dry canal, Cincinnati commerce was never so great, and the activity of its energies never greater. Go to the railway depots and the whole thing is explained at once. We happened to be at the immense freight depot of the Little Miami railway last week, and what did we see? Yards, buildings, roads, every space where room could be found, literally *crammed* with produce, and merchandise going and coming.

Now let us see where this mass of sugar, and coffee, and melasses is going? It is going through the whole North, from Oswego to Chicago—over a country whose radius was five hundred miles! Was there any such commerce with the river, or with turnpikes, or even with canals? The *radius* of trade here with turnpikes was 100 miles, with canals more than 200 miles, and with railways it is 500 miles! Doubling the *radius* of trade *trebles the surface* over which trade extends. To the north and east, this *trebling* has taken place in Cincinnati, but it remains for the completion of the Ohio & Mississippi railroad west to St. Louis, and the Covington & Lexington to East Tennessee, to complete the *trebled surface of commerce in every direction.*

This will take place in a short time, when the grand revolution in Cincinnati commerce will also be complete, making the aggregate commerce of Cincinnati treble what it was in 1850—say *two hundred and fifty millions of exports and imports.* Granting the Southern line be not completed before 1860, it will be but ten years, in which the commerce of Cincinnati will be trebled—its wealth more than trebled, and the cost of all the railways of the West, immense as that is, will be returned to this single city!

We know that this is a startling result, but we have accomplished much of it, and with the completion of the roads south and west, the whole will be accomplished.

Nothing can be a greater mistake than to suppose railways have absorbed too much capital, or, in any way affected the currency of the country. We have sent *fifty millions of gold* to Europe in 1854—and it is THE RAILROADS ALONE WHICH HAVE SAVED THE COMMERCE OF THE COUNTRY FROM UTTER PROSTRATION.

MANUFACTURING INTEREST OF THE WEST: LOCOMOTIVE WORKS, ETC.

The present depression in the monetary affairs of the country has fallen with peculiar weight upon the railroad interest, in all its extent. Not only do railroad companies feel its effects, but they extend to collateral branches; thus all manufacturing interests connected with railroad construction and equipment are deeply affected, with, perhaps, the single exception of the manufacture of rails—and even this is not carried to the extent it would be in this country had there been the usual amount of capital to be had.

These facts are seriously impressed upon us by the suspension of a number of locomotive establishments but recently started at the West—and some at the East—all caused by the inability of railroad companies to fulfill their contracts for machinery, in some instances, and the suspension of work upon others, whereby the demand for equipments has decreased far below the supply. This is a serious drawback to the manufacturing interest of the West. Heavy amounts of capital have been invested in these establishments, and large incomes are necessary to carry them on with any profit. Consequently, it is to be feared that some time will elapse before they will be able to resume operations, and thus far, will materially interfere with the prosperity of the West.

In the midst of this depression and suspension around us, it is a source of gratification to know that our Cincinnati machine shops are still in full operation, with no appearance of being compelled to suspend operations for the want either of work, or means Messrs. Niles & Co., are still busy on orders for locomotives, and Messrs. Moore & Richardson (late Harkness & Co.,) have just turned out a beautiful passenger engine of 20 tons, for the Little Miami road, called after one of our citizens, "R. R. Springer," and a most complete and efficient machine it is too. This firm has also, just ready for shipment, three locomotives for the Nashville & Chattanooga road, of 22 tons each, and named respectively the "J. K. Polk," John Bell," and "Andrew Jackson."

Objection has been made to our Western locomotives—mostly by Eastern men, however—that they have not the *finish* of the Eastern shop work. This *may* have been the case heretofore, as it has been the aim of our mechanics to put the greater portion of the price of their work *into* rather than *upon* their locomotives, that while the Eastern gingerbread work is half the time in the repair shops, theirs may be doing its duty upon the road. In point of efficiency for the purposes designed, we can place the work of Messrs. Moore & Richardson against any other, made East or West, and the best proof we have of the truth of this assertion is in the fact that *our old established roads go to that firm for their work.* When such roads as the Little Miami, Nashville & Chattanooga, Cincinnati, Hamilton & Dayton, and many others we can name, continue to order their engines from one firm, we want no better evidence of their being perfect in their working qualities, though they may have lacked somewhat in their outward adorning.

But we understand that it is the intention of this firm to strive to meet this wish for outward adornment as well as inward finish, without at all interfering with the perfect efficiency of their engines, which they warrant to give perfect satisfaction in all cases. Of this the "R. R. Springer" is a fair specimen, and we feel assured that it would stand a fair comparison with Eastern work in the point of outward finish, while in the requisites of a passenger engine, we know it will be found second to none.

We did not purpose making this artiele so lengthy when we eommeneed, but as we had heard this very eharge made against our Cincinnati work by engineers fresh from the East, to whom nothing could be good that did not come from the East, we entered somewhat warmly into a, perhaps needless, defense of workmanship that speaks so loudly for itself.

As the horizon of monetary affairs is now somewhat brighter in its aspects, and gives hopes of the elouds of depression elearing away ere long, we sineerely hope that the manufaeturing interests of the West will be among the first to feel its revivifying influenee, and that the wonted prosperity of this, as well as other branches of industry, will soon return.

MISSISSIPPI & MISSOURI RAILROAD.

This is the Iowa extension of the Rock Island railway, to the Missouri river, *via* Iowa City, Des Moines, etc.

Between Davenport and Iowa City, the route is already graded, with a full supply of cross-ties on the ground for the superstructure; and the iron is ready at Chicago, as soon as the road is fully prepared for it. From Iowa City to Fort Des Moines, the final location has been made, and it is the intention of the company to put this portion under contract at an early day.

There are three divisions of the Mississippi & Missouri road; viz: first, second and third. The Davenport and Iowa City is the first division, and will run ultimately to Council Bluffs. It is located to Fort Des Moines, running through the southern corner of Scott county, thence through the northern line of Muscatine, *via* Moscow, thence through Johnson to Iowa City, thence through Iowa county, eight miles north of the southern line, and six south of Marengo; thence bearing north through Powesheik, thence west through Jasper, *via* Newton, thence southwest to Des Moines, in Polk county. The heaviest grading on this road is through Jasper county. January 1st it will be in running order from Davenport to Iowa City. One survey has been made from Fort Des Moines to Kanesville and the Bluffs.

The Muscatine and Oskaloosa is the second. It is located to Oskaloosa, has three hundred men at work, and is under contract to Fredonia. This road will probably run to the mouth of the Platte. It is not, at any rate, the intention to run it to Council Bluffs. From Muscatine it runs southwest to Columbus City, in Louisa county, thence west through Louisa and Washington, thence through Keokuk, six miles north of the southern county line, thence to Oskaloosa, in Mahaska county.

The Muscatine and Cedar Rapids branch is the third division of the Misssissippi & Missouri road. It is under contract from Muscatine to Moscow, and will be completed by first of May next.

From Fort Des Moines to the Missouri is being surveyed. Thus the whole line is progressing steadily. This company will not be seriously affected by the money pressure, though they must be so to some extent; and we may look for the completion of this line at no very distant day.

Iowa has contemplated railroads sufficient to allow almost every acre in the state to be crossed by one, at least; and notwithstanding the state of monetary affairs, new schemes are constantly springing up there.

We are the more pleased, therefore, when we find a reasonable prospect of any of them being completed, as is unquestionably the case with the Mississippi & Missouri railroad.

Counterfeit Quarters.—The New York *Journal of Commerce* calls the attention of the public to a counterfeit quarter of a dollar, which is the closest imitation in appearance of the genuine coin, which ever fell under our notice. It was taken at the post-office, and paid into the subtreasury, where it was detected by the weigher and tester of coin. The counterfeit appears to be made of zinc or other bright metal, is cast to resemble exactly the genuine coin, and is afterward "galvanized" with pure silver. It is dated "1853," and is about ten grains lighter than the genuine, and is very brittle. By the latter characteristic, it may be easily detected, as it will readily break by a blow from a hammer. There are probably but few now in circulation, and receivers of money will do well to be on their guard against them.

Philadelphia, Wilmington & Baltimore Railroad.—The Philadelphia, Wilmington and Baltimore Railroad have postponed their dividend to January, in consequence of having expended their earnings on improvements. They do this in preference to selling their assets, such as bonds, real estate, steamboats, stocks, etc., at present depressed prices. The net earnings for the six months ending August 31, 1854, have been, after deducting the usual appropriation to renewal fund of $30,000, a little over 3 per cent. The company have on hand and unsold, $190,000 of bonds, authorized to be issued in January, 1853, for improvements, other than the bridge and double track, also $350,000 of other assets.

Cincinnati and Chicago Railroad Company.—An election of directors for the Ohio division of this company was held in this city on Monday the 9th inst., when the following board was elected: C. B. Smith, Samuel L'Hommedieu, R. M. Corwine, Thomson Neave, S. B. W. McLean, Cincinnati; M. G. Bright, Madison, Indiana; James Sample, Butler county, Ohio; Sam'l Martin, Isaac Bates, Hamilton county, Ohio. The board was organized on the same day by the election of C. B. Smith President; Stanhope S. Rowe, Secretary.

The Management of the Hillsboro' Railroad.—We really wish the directors of the Hillsboro' railroad company would make some arrangement by which business on its line can be properly conducted. Last week there *was not a single freight car at Hillsboro' for three days*, and we know not how much longer. Now how is it possible for a road to transact business satisfactorily, in such a state of things? Such a fact is, of course, displeasing to those who had freight to carry—but it is equally unprofitable to the Company. Especially will this be the case when another railroad is running from the same region, not more than ten miles from this.

Freight may have a choice, and at any rate, it can not be for the interest of any railroad to be managed in quite so *slow* a manner.

Symmes Valley Railroad.—We learn from the Ironton *Register*, that a meeting of the citizens of Lawrence county was held at Marion, on the 22d ult., and resolutions adopted to survey the line of the contemplated road, using for that purpose the money already collected. A committee was also appointed to procure the services of a competent Engineer. N. Vermillion, was elected Treasurer of the company.

Thus, despite the stringency of the money market, new enterprises are being undertaken, where the wants of the community *actually* call for them. Such is the case in this instance; and we doubt not that the means to build the road will be forthcoming along its line, when the time comes.

Dayton Short Line Tunnel.—We learn from Mr. Gest, that this tunnel is progressing again; a large number of workmen being employed at both ends of the work. It is an important work to this city, as affording an inlet for cars to the very center of the business community; and that too without crossing a single street; thus obviating all danger of collisions with vehicles of any kind, while passengers are landed near all the principal hotels.

City of Philadelphia a Holder of Railroad Stock.—Philadelphia is a stockholder to a large amount in the following railroad companies, viz:

Hempfield,	(all paid)	$ 600,000
North Penn.,	"	1,400,000
Pennsylvania	"	5,000,000
North Western	"	75,000
Sunbury & Erie	"	1,000,000
Total		$8,075,000

The Pennsylvania road pays interest at 6 per cent.

Indianapolis and Cincinnati Railroad.—At the late election of directers of the company, the following gentlemen were elected: Thomas A. Morris, Harvey Bates, James M. Ray, Indianapolis; C. Worthington, P. Outcalt, Cincinnati; L. B. Lewis, H. K. Hobbs, Lawrenceburgh; Joseph G. Monfort, A. R. Forsyth, Greensburgh.

BALTIMORE & OHIO RAILROAD.

From the Baltimore *American* we gather the following particulars of a meeting of the stockholders of this company, held at Baltimore on Monday 9th inst., for the purpose of nominating twelve directors to manage the affairs of the company for the ensuing year.

The following gentlemen, representing a large amount of the stock and securities of the company were nominated: John Hopkins, Chauncy Brooks, Benjamin Deford, Andrew Gregg, Marcus Denison, Wesley Starr, Columbus O'Donnell, Nathan Tyson, Edward Patterson, William A. Hack, Francis Burns, William Lamping.

Mr. John Garrett offered a preamble and resolutions to the following effect, viz:

WHEREAS, Notwithstanding the immense business and large gross receipts of the Baltimore and Ohio railroad Company, during the past eighteen months, the shares and securities of the Company have greatly depreciated in market value, its finances become embarrassed, credit impaired and its stockholders been repeatedly disappointed in their just expectation of dividends; and whereas, in their judgment these results are mainly attributable to the pursuit of an erroneous policy in the conduct of the affairs of the road, they in view of the election of twelve Directors to serve on their behalf for the ensuing year, and, as instructions to said Directors, deem it expedient and proper to present briefly their views of the course to be pursued to restore public confidence in this great enterprise, and to satisfy, as they believe, not only the individual stockholders, but this unreasonably and unnecessarily overburdened tax paying community.

Therefore be it Resolved, by the stockholders of the Baltimore and Ohio railroad Company, That a rigid, careful, practical and thorough economy should be exercised in the management of every department of the affairs of the Company, in general and in detail.

That all employees on the line of the road, and at the termini, whose services are not indispensable, for the proper conduct of its business, shall be promptly dismissed, and that in all cases unnecessary expenses of every description shall be abated.

That the method of collecting fares and freights shall be improved, and that the most rigid accountability of the agents and conductors of the road, shall be exacted.

That the system of free passes, through and local, which has become an enormous abuse, shall be unconditionally abolished.

That to the greatest practicable extent the use of animal power in the city be abandoned, and that this service shall be furnished only when the extra compensation may be adequate to the cost.

That the charges for transportation and travel on all way-business shall be advanced to remunerating rates, and that in re-adjusting the tariff for the business in the vicinity of the city, the consumption of time, of cars and cost of animal power shall be items specifically considered.

Especially, as all the elements of the cost to the company of transportation of coal, viz: repairs of track, iron, wages, the value of money invested in the requisite machinery, etc., have materially increased, and that the existing rate per ton per mile, is believed to be the lowest prevailing on any road, not only in the United States, but in the world, and that it is not reasonably remunerative, the rate on this article shall be increased to a satisfactory standard.

That as the value of coal has improved at the points of consumption, and as coastwise freights on the same have recently declined $1.00 to $1.50 per ton, an appropriate period is presented for the desired advance—prompt and decided affirmative action regarding this important item is therefore recommended.

That the practical embodiment of the features embraced in the foregoing resolutions, will constitute a policy which will, in the opinion of this meeting, legitimately result in the restoration of full confidence in the company at home and abroad; in the satisfaction of stockholders; in the relief of tax-payers; in *net earnings*, commensurate with the capital invested; with the large and increasing business of the road, with the reasonable expectations of all parties interested, and in the payment of regular dividends.

The nominations and resolutions were adopted unanimously and the meeting adjourned.

THE CATAWISSA, WILLIAMSPORT & PHILADELPHIA RAILROAD: OPENIMG CELEBRATION.

The opening of this line, connecting Philadelphia with Dunkirk and Buffalo was celebrated on the 6th and 7th inst.

This line passes through a region of country abounding in iron, coal and limestone. The distances from Philadelphia are as follows:

	Miles.
By Reading Railroad to Port Clinton	78
Little Schuylkill Railroad to Tamaqua	20
" " " Junction	8½
Catawissa Railroad to Catawissa	38¾
" " Danville	10
" " Milton	14½
Total	169½

On the Catawissa road there are:

TUNNELS.

New	200 feet long.
Summit	1200 "
Little	400 "

BRIDGES.

Dark Run	500 feet.
Little Catawissa	1100 "
Stranger's Hollow	800 "
Mine Gap	600 "
Fisher's Run	800 "
Furnace Run	800 "
Susquehanna	1400 "

At Milton the excursion party sat down to a banquet in honor of the occasion; after which numerous sentiments were offered, and replied to. From among the replies we select the following, elicited from E. Miller, Esq., by a sentiment referring to himself as the original engineer of this line, many years since. He said:

"Nearly twenty years ago, some enterprising gentlemen, who knew and appreciated the importance of the route which we have this day traversed, sent me with a corps of engineers to explore it. My report was considered so favorable that, in the year 1836, it was placed under contract, and was vigorously prosecuted under myself and my intelligent successor, Mr. S. W. Roberts, who accepted the post upon my resignation to take charge of the early surveys of the Sunbury and Erie railroads.

"With the early friends of this road and its early history, I am, of course, well acquainted. He who called it into existence first, and whose early and indefatigable labors throughout its career, will be acknowledged by all its friends, Colonel Joseph Paxton, my old friend and faithful coadjutor during the laborious days that I passed in the service of the Catawissa railroad Company, is here present to speak for himself. I never believed he could die, or at any rate, could rest in his grave, if this road were not completed, so that he could dine in Catawissa and sup in Philadelphia. He has enjoyed this privilege, and may he long live to reap the fruit of his labors and anxieties.

"I came here an ambitious youth, to my first independent labors as an engineer-in-chief. Since I left here I have toiled diligently in my profession, and done my part in smoothing down the asperities of old Pennsylvania. The faithful band of assistants who once aided me here, have also done their part. Some have gone to give an account of their stewardship; some hold positions of great respectability in their profession; one is an eloquent divine; one a distinguished physician; one a learned lawyer. I can not call to mind more than one of my old Catawissa corps, who has not done credit to the school he belonged to.

"I am heartily rejoiced that this important work is at last completed, after lying so long in a state of paralysis, and I congratulate most sincerely the able and enterprising gentlemen who have waked it up from sleep, and carried it forward to a successful termination. But here I feel as if I belonged to the past, and with your permission, I desire to propose a toast in memory of one who deserves the grateful recollections of all friends of the Catawissa road, who aided it by his power and influence when it needed aid, because he believed that it deserved assistance; one who was always ready to advance what he believed to be the true interests of his native state and his native city; one whose errors of judgment all who knew him, should remember with kindness, for who among us claims infallibility? I propose the memory of a true hearted Pennsylvanian, Nicholas Biddle."

Which was drank standing and in respectful silence.

CENTRAL OHIO, AND BALTIMORE AND OHIO RAILROAD CONNECTION BELOW WHEELING.

The decision of the Central Ohio company, to locating their eastern terminus at Bellair, and the action of the Baltimore and Ohio company in constructing a landing at Benwood, four miles below Wheeling, to connect with the Central, thus giving Wheeling the go-by completely, has seriously affected the denizens of that goodly city, and they have had meetings, appointed committees, and taken steps to prevent the Baltimore and Ohio road from continuing their operations at Benwood. The following resolutions were adopted at the meeting, viz:

Resolved, That the railroad committee employ counsel forthwith to institute proceedings against the Baltimore and Ohio railroad company to enjoin them from making and using the track and wharf aforesaid, and also from loaning their credits aforesaid to the Central Ohio railroad, and to take forthwith

such other steps as said committee may deem expedient in order to secure to this city the "practical benefits of the Western terminus of the Baltimore and Ohio railroad."

Resolved, That five members of the Council and five citizens (one from each ward,) be appointed a committee with power to employ suitable engineers to ascertain and report the most practicable means of transit across the Ohio for railroads from the West, within the corporate limits of the city; with power to confer with the different railroad companies and obtain their views in relation thereto, and that they report their proceedings thereon at as early a day as practicable.

Resolved, That a copy of the 2d resolution be at once forwarded to the Cleveland and Pittsburgh, the Marietta and Cincinnati, the Hempfield, and the Central Ohio railroad companies, and that they be requested to confer with said committee appointed thereunder.

In pursuance of these proceedings the Baltimore and Ohio railroad Company, have been notified that the City of Wheeling will apply on the 20th inst., at the Court house of the county, to a circuit judge for an injunction to restrain that company from completing or using the work designed to form a connection with the Central Ohio railroad at Benwood, four miles south of the city.

OHIO & INDIANA RAILROAD.—From the Fort Wayne *Sentinel* we learn that some delay has been experienced in the receipt of iron, and in consequence, this road can not be completed quite as early as was expected. Only 6 or 7 miles now remain uncompleted, and these will be finished, we presume, in ten days or two weeks at the farthest.

A passenger car has been fitted up, and runs from Fort Wayne to the end of the rails, about 15 miles, thence passengers are conveyed by stage 7 miles to meet the trains for Cincinnati, Pittsburgh, or the lakes.

CANADIAN SURPLUS PRODUCE.—The surplus products of free duty articles in Upper Canada, for this year, are estimated by a Canadian writer as follows:

12,000,000 bush. of wheat at $1,50	$18,000,000
2,000,000 " Oats at 40c	80,000
1,000,000 " Barley at 40c	40,000
Seeds	100,000
Vegetables	50,000
Poultry	10,000
Furs and skins	150,000
Butter	200,000
Lumber of all kinds	4,000,000
Wool	1,000,000
	$23,630,000
All articles under treaty, say	1,000,000
Total	$24,630,000

Boston Courier.

OBITUARY.

It is with much regret that we notice the demise of NEWTON LARSH, Esq., lately connected with the Four Mile Valley railroad in this state; the board of directors of which company, met at Eaton and passed some highly eulogistic resolutions relative to the deceased, among them was the following:

Resolved, That in the death of Mr. Larsh, this board and the surrounding community have lost a most efficient, liberal, enterprising and worthy member, on whose judgment great reliance could be placed, and whose example was worthy of imitation.

VIRGINIA & TENNESSEE RAILROAD.

From a communication in the Lynchburg, Va., *Republican*, we glean the following items about this company:

The indebtedness of this company, when their work is completed, will be, $1,000,000, due to the state, payable in 30 years, with interest, payable semi-annually, at the rate of 6 per cent. per annum, and 1 per cent of principal to be paid annually. Second, $500,000—issued to individuals, with the same conditions, except that they are to be redeemed in—— years, which together with the million due the state, is secured by a mortgage on all the property and revenue of the company. Third, $500,000 of bonds secured by a second mortgage. The sums will make a total indebtedness of $2,000,000.

The whole cost of the road, 204 miles in length, will be $5,000,000 or say $25,000 per mile, when completed and equipped with a large supply of cars and locomotives.

Here is a road well located, through a country rich in agricultural and mineral wealth costing, when equipped, the low average of $25,000 per mile, total cost $5,000,000 mortgaged for $2,000,000.

The East Tennessee & Virginia road, 130 miles in Tennessee, is now constructing, by which this road will connect at Knoxville; and thence, over the various roads that center there, with points North, West, and South; making the entire line a very valuable connecting link, in an extended chain of railways.

EXPERIMENTS IN STOPPING RAPID TRAINS.—It has been long a curious problem to determine the period of time in which a heavy train of carriages in rapid motion on a railroad, may be brought to a stop, by the application of the usual methods of retardation under the control of the driver of the train—and to apportion those periods to any degree to the rapidity of the motion to be suspended.

In consequence of the raising of the question lately in England, arising from a fatal collision on the Corydon railway, whether all practical efforts were made in that case by the driver of a passenger train, moving at a speed of from 50 to 60 miles an hour, to bring it to a stand, from the moment of receiving notice of an obstuction on the track, a series of experiments were made under the direction of Capt. Tyler, of the Board of Trade, in concert with the officers of the South Eastern and Brighton railway Companies, with a view of throwing light on the subject. The results of these experiments are deserving of notice, as they appear to have been made with care, and are satisfactorily authenticated.

The object aimed at was to ascertain within how short a time, and how small a distance, a train running at the speed above described could be stopped. For this purpose two experimental trains were made up, one by each of the above named companies, laden respectively with 32 tons iron properly distributed among the carriages, that being computed to be about the weight of the 450 passengers, who were in the excursion train to which the accident occured. That the trial might compare at nearly as possible to an ordinary case of running at that rate of speed, the men in charge were not previously informed at what moment they should pull up, but were to await a signal arbitrarily given by Capt. Tyler, at a moment when they might not be expecting it. Four experiments were made—two by simply shutting off steam and applying the breaks,—and the other two by the application of these means, and in addition, reversing the engine, with the further addition in the last of scattering sand on the track. The results were, that the trains were stopped in the first instance in a space of a little more than a mile and a fifth—in the 2d, in a mile and one sixteenth—the 3d, in a little over a mile—and the 4th, in a little over three quarters of a mile.—*Boston Adv.*

CHINESE ENGINEERING SKILL.—Europeans and Americans are very apt to consider the Chinese as barbarins, when compared with our own and other Christian nations. Yet we are constantly meeting with facts in relation to that singular people, which put to the blush all our vainglorious boasting. What are our great canals when compared with that extraordinary work of art, the Imperial Canal of China, which was built by the Mongol Emperor, Kulbai Khan, and extends a distance of more than 600 miles? Great hights are tunnelled, lakes bridged, and stupendons embankments thrown over marshes and low ground to afford it a passage. Unlike our canals, its capacity is not limited to small boats, but large ships sail upon its waters, which are filled by mighty rivers, and serve not only the purpose of a commercial highway, but are used for the twofold objects of irrigation and drainage, thus rendering available for cultivation much land which would otherwise be useless. This canal has been pronounced by Europeans a gigantic work, and one displaying sound practical engineering skill, and even genius, in its construction. Yet it is only one among many achievements of art to be found on a larger scale in China than in any other country in the world.

THE WAY OF MANAGING A RAILROAD.—The London and Northwestern railroad Company, one of the wealthiest in England, has introdueed a very remarkable principle into the working of its business. It gives every man employed on its roads an interest in its prosperity. In its contracts each worker is dependent, to a great respect, on the care and labor he contributes to the general stock. The directors of the company have entered into formal contracts with their engineers for running the locomotives. They pay them so much per mile, sell them the fuel, oil and other necessaries at first cost, and allow them as profits what they can save from a regular allowance by economy and skill. The engineer pays a fine for every moment lost by his delay, and is therefore interested in being regular and punctual. In this way the company saves a large sum of money every year, and it is found that there are less dangerous accidents on its roads than any others in the country.

CATAWISSA & WILLIAMSPORT RAILROAD.—The Catawissa, Williamsport and Erie railroad Company have an excursion to-day, from Philadelphia to Milton. The route is from Philadelphia by the Reading road to Port Clinton, 78 miles, thence over Little Schuylkill road to the junction, 28¼ miles, thence over Catawissa road to Milton, 63¼ miles. Total, 169½ miles.

CHARTIERS VALLEY RAILROAD.—Work on the Chartiers Valley (Pa.) railroad, it is stated, has suspended. Cause—want of funds

Communications.

AMERICAN AND FOREIGN RAILROAD IRON

The following article is from Professor Mather, who is most thoroughly acquainted with the subject; and especially with the coal and iron region of Ohio. He will pursue this topic in other numbers. He says:

Mr. Mansfield has shown very conclusively the advantages that would accrue to the railroad interests, and to the community generally, by abolishing the duties on railroad bars,

He has also shown, and it is evident from other sources, that his estimate of 3000 miles of railroad to be constructed annually, for the next four years, is a minimum estimate.

3000 miles of railway, with side tracks. switches, and the usual proportion of double track, will require 400,000 tons of railroad bars.

400,000 tons will cost, in bonds, at $40 per ton		$16,000,000
Discount on bonds at $4,20 per ton		1,680,000
Interest and exchange on bonds, cash at $2,50 per ton		1,000,000
Duties in cash at	$16,00	6,400,000
Commission "	$2,80	1,120,000
Freight "	$8,00	3,200,000
Total		$29,4000,00

The iron for 3000 miles of railroad annually, will then cost $29,400,000 of which $17,680,000 will be in bonds bearing interest, and $11,720,000 will be paid in cash, about one-half, to be buried in the government vaults comparatively useless to the community, for a considerable period, and the other half mainly paid to foreign ships and commission agents.

This brings the cost of such iron at $73,50 per ton in New York, and is quoted in New York, Sept. 2d, 1854 at $78,50 to $80 per ton. London, Aug. 26, £7, 10s. to £8, 5s.

American railroad bars, which have been found more durable and better than the foreign, can be manufactured with profit at these rates. Why then, it may be asked, when there is so great a demand for railroad iron, has it not been more extensively manufactured?

Various reasons have conspired to prevent the manufacture of railroad iron from keeping pace with the increasing demand, among which the following are the principal, viz:

1. The American manufacturers are mostly fully employed to supply pig iron for castings, and for the manufacture of common merchant irons.

2. Railroad mill establishments require much more capital, and do not, at present prices of pig iron, make corresponding profits for the production, and the capital invested.

3. Large amounts of capital are not, in this country, easily diverted from the usual channels of investment, in which it is kept fully and actively, and profitably employed in business well understood by those employing or owning it. The extension of the iron business has been almost entirely from the surplus profits of iron-masters.

4. The long credit given on railroad iron in England, by disposing of mortgage bonds on the railroads instead of money, or short credit, which would be required in the U. States, has tended to draw nearly all the calls for railroad iron in that direction.

5. Any *extension of the manufacture of railroad iron must be by smelting the iron ore with stonecoal*, while the iron-masters in most parts of this country are accustomed to smelt with charcoal. In Pennsylvania and Maryland much iron is now made with anthracite and bituminous coals. In Ohio a few furnaces are at work with bituminous coals; other stonecoal furnaces are building, and the prejudice against stonecoal is fast passing away. Many of our iron-masters are now satisfied that they can make good pig iron with stonecoal, and with such ores as they would have rejected from a charcoal furnace. In Kentucky the bituminous coal has not been tried. A new era in the iron manufacture is dawning.

The stonecoal iron manufacture, will not interfere at all with the charcoal furnaces, and is now gaining favor with the iron-masters. The iron belt of Ohio, Pennsylvania and Kentucky, may soon, under favorable circumstances, be thickly dotted with furnaces making iron from ores like those of Wales and Scotland, and with stonecoals of similar character.

I purpose in a future article, to show that with proper encouragement from railroad companies and the government, we can, within four or six years supply railroads with American iron as cheaply as the Welsh bars and after the works are well established, as much credit on bonds given, even if the duties be removed from foreign railroad bars.

W. W. M.

Discoveries in Metals.—Mr. Deville, whose discoveries in relation to aluminum have recently created quite a stir in the scientific world, has for a long time been engaged in the preparation of a work upon the pure metals, produced and melted by processes of his own. In the course of his researches he has discovered that the two metals, nickel and cobalt, possess, contrary to the general belief, the useful properties of malleability and ductility, in a very remarkable degree, and also an extraordinary tenacity, far superior to that of iron, which has hitherto been supposed to possess this quality more perfecty than any of the metals. From M. Vertheim's experiments on wires of equal diameter made of iron, nickel, and cobalt, it appeared that the weights which determined the rupture of the several wires, were respectively as the numbers of 60 for iron, 90 for nickel, and 115 for cobalt. This would establish for cobalt, a tenacity almost that of iron. They may be, moreover, worked at the forge with the same facility as iron. They are perhaps less subject to oxydation than iron, and may be used for the same purposes.

PENNSYLVANIA RAILROAD EARNINGS.

We give the receipts, in round numbers, of the following roads for 1853:—

Reading,	$2,689 000
Pennsylvania,	2,800 000
Germantown,	170 000
Mine Hill,	283 000
Beaver Meadow,	130 000
Cumberland Valley,	109 000
	$6,180 000

To this must be added the receipts of the Philadelphia and Trenton; that portion of the Philadelphia and Wilmington within this state; the Williamsport and Elmira, and all the minor coal railroads, which are numerous and in the receipt of considerable incomes. The total, last year, must have increased the above sum to upwards of seven millions of dollars, as the aggregate income of the railroads of Pennsylvania. This year, the additional income of the Pennsylvania railroad, the Reading, and other coal roads, and the new receipts from roads lately brought into operation, will probably swell the total sum derived from these improvements to Ten Millions of Dollars—Philadelphia Inquirer.

Tanning Cotton and Linen.—English and French fishermen have long been in the habit of tanning their sails, etc., in bark liquors, in order to render them more durable. Milliet states that pieces of linen, treated for 72 hours with an oak bark liquor, at 15°, and stretched on frames, remained unaltered in a damp cellar for ten years, while untanned linen, in the same place and for the same time, had entirely rotted. It was further shown that linen, which had begun to moulder, might be preserved from further change by being tanned. It seems to be only necessary that the articles should be kept two or three days in warm solution of tannin. Awnings may be treated in this manner with either oak bark, or sumac—both will answer. This will afford a useful hint to our sailcloth manufacturers.

Office of Ohio & Pennsylvania R. R. Co.
Pittsburgh, Oct 7th, 1854.

Receipts in Sept., 1854, - -	$123,441 59
do do 1853, - - -	80,874 38
Increase, - - - - - -	$42,567 21
Receipts in first nine months of 1854, - - - - - - -	$754,914 92
Receipts in first nine months of 1353. - - - - - - - -	445,723 24
Increase (69 per cent.) - -	$309,191 68

The receipts for 1854 were estimated by me at $900,000, but there is no doubt now that they will be more than a million.

S. W. Roberts, Chf. Eng. & Supt.

Florida Railroad.—The Jacksonville, Florida, *News* says that the company having the important work in charge of construction a railroad across Florida, have already made arrangements which insure the constructing of the southern fork of the road terminating either at Tampa or Charlotte Harbor.

The *News* thinks that until a full survey has been made of these harbors and of the route leading to them, the choice cannot be settled; but the Superintendent of the coast survey promptly acceded to the request of the company, to cause reconnoissance to be made, and that it will be executed at an early day.

AN IRON COFFER DAM.

In a report of the proceedings of a semi-annual meeting of the Cornwall railway Company in England, embracing the report of Mr. Brunnel, the Engineer, on the works of the Saltash Bridge, on a part of the line of unfinished railway between Truro and St. Anstell, we find a description of a coffer-dam of a novel construction, sunk in a very deep part of the river, to facilitate the construction of a pier for the support of the center of the bridge, which forms a necessary part of the line. The dam in question is not only of a novel structure, but it is made to shut out water to a greater depth than any other work for a similar purpose that we have before seen an account of, viz., a pressure, under high tides, of 70 to 80 feet. It is so constructed as to act on the principle of the diving bell, in case the water should find its way into the inclosure. But it seems to have thus far served its purpose, without a resort to this apparatus. This structure is thus described:

"It consists of an iron cylinder 37 feet in diameter and 85 in hight, containing, within itself all the arrangements of air chambers, passages, &c., necessary for using it either as a large diving bell or simply as a coffer-dam, as circumstances might require, and so constructed as to be afterwards divided into two parts vertically, and removed after the pier shall have been built within it. The whole, weighing upwards of three hundred tons, was safely launched and floated into place, where it was raised perpendicularly, and pitched upon its lower edge in the center of the river. The river is at this point upwards of 50 feet deep at low water of neap tides, and except for a short space on the return of the tide, there is a considerable current; under such circumstances, this cylinder, drawing 50 feet of water, was pitched upon its lower edge accurately—that is, within three or four inches of the exact point required, Since then the work has been carried on at the bottom of the cylinder, as in a diving bell, against a pressure of water occasionally of 70 and 80 feet. The mud and other deposits, forming the bed of the river for 10 feet or 12 feet in thickness, have been removed, the cylinder is now resting on the rock, and preparations are making for excavating the rock into level beds for receiving the masonry."

The railway of which the branch now under construction, and nearly in readness to receive the rails, forms a part, is an extension of the line of the Great Western, the Bristol and Exeter, and the South Devon railways, throughout a great part of the county of Cornwall to near the Land's End.

The New Frigates.—We stated a day or two since that the building of one of the new steam Frigates, the Niagara, would be commenced at the Brooklyn Navy Yard to-day, under the supervision of George Steers. The Niagara is to be the largest vessel ever built in this country. Her extreme length will be 345 feet; depth of hold, 31 feet; breadth of beam, 55 feet; draught when loaded, 22 feet nine inches; displacement 5,500 tons. Mr. Steers has contracted to give her a speed of 17 nautical miles per hour under sail alone, and a velocity of 16 nautical miles per hour under steam alone, in case the engines are constructed by Messrs. T. H. & E. Faron. The Niagara is to be a propeller, and carry guns of eleven inch bore, or of the largest caliber used in our navy. The five remaining frigates are all to be much smaller than the Niagara, having a displacement of only 3,500 tons.—*N. Y. Mirror.*

Hartford, Providence and Fishkill Railroad.—An experimental trip was made over this road, Thursday, Sept. 21. The President and Directors, with the chief engineer and his assistants, and the President and Directors of the Boston and Providence railroad Company, left the depot of the Boston and Providence railroad in this city, soon after noon, and stopping occasionally at interesting points, proceeded to Hartford. We have, from time to time, kept our readers so well informed of the progress of this work, that we have little to add, except that all we have said of the excellence of the construction is fully sustained by the examination which has been made of it. The road bed is equal to any in New England, and it is conceded that on no other is there such masonry. The stone is hewn to a joint and laid in cement, and we were assured that the portions under ground were as substantial and enduring as those above. The bridges over the Pocasset, the Quinebaug, Little River and Flat River, would be considered triumphs of engineering, if the great works that have been constructed through the coontry, in all directions, had not made us familiar with far greater exhibitions of mechanical power and skill. But though other roads have been carried over more difficult points, none have been built in a more faithful and substantial manner. Nothing short of an earthquake can shake the piers and arches of these structures.

Two of the new locomotives are from the works of William Mason & Co., Taunton, and six more are contracted for with the same house. They are the first locomotive engines made by these eminent mechanics, and show that the reputation which they long enjoyed in other departments of machinery will be fully sustained in this.

There are no depots erected between Providence and Willimantic, but the opening of the road will not be delayed for lack of them. An arrangement was made, in the beginning, for the use of the depots and tracks of the Boston and Providence roilroad at this end of line, and temporary platforms will be erected at the stopping places. The Annual meeting of the company will be held at Hartford on the 25th of October, when the stockholders will be invited to go over the road.—*Providence Journal.*

Mason Co., Ky., Railroad Bonds.—The county of Mason, in the state of Kentucky, having issued to the Maysville and Lexington railroad company $200,000 of their six per cent. bonds, redeemable in thirty years, has recently, by virtue, of a special law of the state, made *a levy of five cents* on the hundred dollars, to be applied exclusively as a sinking fund for the liquidation of those bonds, a levy having been originally authorized and made and collected for the interest thereof. This tax for the sinking fund will yield from six to eight thousand dollars per annum, and be ample to cancel the entire debt. In the West much attention has of late been given to the creation of similar sinking funds, to meet at maturity the debts of cities, counties and railroads. We learn that the Ohio and Pennsylvania railroad have taken measures of this kind to liquidate their income bonds, and that several other companies have it in contemplation. Nothing could be done so effectually for the placing on the highest ground the credit of our railway securities. It will be remembered that the New York Central Company have a sinking fund in course of accumulation sufficient to meet at maturity, their six-per cent. bonds, issued at the time of the consolidation.

Liabilities of Common Carriers.—A suit was recently brought against the Erie railroad company to recover the value of a box of goods committed to their care and designed for transportation to Cincinnati. The defendants proved that the box was safely transported over their road and forwarded by the usual conveyance from Dunkirk to Cincinnati, between which points it was lost. The plaintiffs contended that the receipt given for the box at New York amounted to a contract for its transportation to Cincinnati. The Judge, however, decided that the defendants were an incorporated company for the transportation of freight and passengers from New York to Dunkirk, and to the extent of their line they were to be deemed common carriers. In order to make them liable beyond the terminus of their line as common carriers, an express agreement to carry must he shown. This express agreement was not to be inferred from the ordinary receipt given by the company's agent at New York. When a box of goods is delivered to a common carrier, marked in a particular manner, without any directions except such as may be inferred from the marks themselves, the carrier has a right to presume that the consignee of the goods intends the carrier shall transport and dispose of them in the usual way; and if the owner of the goods neglects to make the necessary inquiries as to the usage or custom of the business, or to give direction as to the disposal of goods, it is his own fault, and the loss, if any, after the carrier has performed his duty according to the ordinary course of his trade and business, should fall upon such owner, and not upon the common carrier. The rule of law which now seems to be established is, that common carriers are not liable for the safety of goods beyond the route on which they are carriers.

"Dead Heads."—In an article in the Indiana *Journal*, on the subject of free passes over railroads, we find the following interesting statistics as to the number and costs of the *dead head* railroad traveling tribe:

"We are informed by one who has the best opportunities of knowing, that the "free passes" granted on the eight roads entering here, would amount, at the rate at which they have been issued since the first of January, to nearly *five thousand*, and the total loss by "dead heads" of all descriptions, to fully *two hundred thousand dollars*. The extent of the imposition only becomes apparent when its sum total is told, and truly it is vast enough to call imperatively for some sure and speedy remedy.

To show how little the "press" merits the blame of maintaining this evil, the same gentleman that gave us the above estimate, said out of the four or five thousand free passes issued, not more than a *hundred* went to editors. This fact is worth notice, and we hope that the "press' which receives so small a share of the benefits of the system of which they bear the whole blame, will lend their voices to its destruction."

MONETARY.

At the East we quote the supply of money still unequal to the demand, and interest rates have advanced. The heavy drain of specie for exportation has shortened the banks, and in turn, they have curtailed their discounts, money has consequently been very scarce, and even call loans have been difficult to be had, and then only upon the most undoubted security. Prime mercantile paper is difficult of negociation, except at very short date, at about 12 per cent. The offerings of railroad securities have been, and still are large, but find very few operators at rates from 10 to 24 per cent. In view of these facts, we quote the Eastern market as very stringent.

Foreign exchange was dull at about 109½ for best names.

The stock market has been dull and spiritless, under the influence of a stringent money market; the sales have been quite small, though the average price has declined but little, showing:

Sales by A. H. Nicolay 12th inst.—

New York Central	91@92¼
New York & Erie	44¾@45¼

At home we can uot qnote any change for the better in Monetary affairs; the currency question is still unsettled, though steps have been taken by our merchants to settle it in a satisfactory manner. We give below the proeeedings of a meeting of our merchants relative to tbe Indiana Free Banks, which, if carried out, will eventually relieve the market. An arrangement is also being consummated between our Bankers and the Banks of Ohio, Kentucky, Wheeling, and the State Bank of Indiana, by which our Bankers agree to sell exchange on the East at not more than ½ per cent. premium for the ensuing six months, and not to return any of the issues of the above-named Banks for redemption within the same period of time. This, by putting a stop to "assorting" currency will give the Banks confidence to issue, and thus supply the demands of trade for currency. This arrangement goes into effect on the 1st proximo.

The rates of interest are very irregular, varying from 1@3 per cent per month, though on short paper only are such rates paid. Permanent investments will not command over 10 per cent. per annum.

The Stock Market, of course, feels the effects of this stringency. We quote last week's rates as maintained, though the market is not firm. For transactions we refer to quotations of sales in our columns.

P. S. Since our Report was made up we learn that several of our Banking houses. The People's Bank, the Kentucky Trust Company Bank of Covington and the Saving's Bank, have closed their doors. The Bank of Connersville, Indiana, closely allied to the last two above named, being owned by the same parties, has also closed. The assets of the three last, however, are said to be ample.

MEETING OF WHOLESALE MERCHANTS.

At an adjourned meeting of Wholesale Merchants of Cincinnati, held at the Merchants' Exchange this afternoon, to take some action relative to the State Stock Banks of Indiana, Lewis Worthiogton was appointed Chairmau and B. F. Brannan Secretary.

The Committee appointed at a previous meeting, reported the subjoined agreement, which was unanimously adopted.

The undersigned, wholesale merchants of Cincinnati, having satisfactory information that the State Stock Banks of Indiana named in the following list, are reponsible and well conducted institutions, and that they have in all cases responded to demands upon them for the redemption of their notes by the prompt payment of coin or exchange, hereby agree to receive from our customers, at par, notes of the said Banks (and such others as we may hereafter find to be equally worthy of credit) in payment of debts due us, or for merchandise, so long as the notes of said Banks shall be redeemed on presentation.

Mr. John W. Ellis offered the following resolutions, which were adopted.

Resolved, That a committee of three be appointed for the purpose of negociating with a responsible Bank or Banking house of this city, to receive from the persons or firms signing our agreement, the paper of the designated Banks on terms mutually favorable to us and themselves, for the purpose of converting the same into current funds or Eastern exchange.

Resolved, That in corresponding with the Stock Banks upon this subject, our agent be requested to place the subject upon a footing of friendship and good understanding between the merchants of this city and the Stock Banks of Indiana, and that the price to be paid to them for Eastern exchange, shall not be less than the rate charged by Ohio Banks.

Resolved further, That if any of the Banks refuse to redeem their paper on presentation, in coin, current funds, of exchange, that our agent shall immediately notify each one of us, and we hereby pledge ourselves to take no more of the issues of said bank.

The Chairman appointed the following gentlemen as the Committee under the first resolution.

JOHN W. ELLIS.
JOSEPH C. BUTSLER.
R. M. POMEROY.

On motion, the Chairman and Secretary were added to that Committee.

LEWIS WORTHINGTON, Chairman.
B. F. BRANAAN, Secretary.
CINCINNATI, Oct. 14, 1854.

NORTHERN CENTRAL RAILROAD.—We learn with great gratification that the Committee of arbitrators appointed by the several railroad companies to asses the property, &c., of the Companies to be merged by the act of consolidation into the Northern Central railroad Company, have agreed upon a basis of arraangement by which all the difficulties will be promptly settled. We are authorized, therefore, to hope for the early consummation of the Consolidation, and the prosecution under improved and more vigorous auspices of an enterprize of immense importance to our city.—*Raltimore American.*

RAILROADS IN TEXAS.—There are forty threecharters for railroads in Texas, but only one (the Harrisburgh) on which there is a car or a rail. Should they all be constructed, with illimitable branching privileges, the bonus of public land to be given to each mile, would exhaust the State domain and still leave them unsatisfied, but there can be ltle doubt that many chrrters will be quashed by limitation

MINERAL POINT RAILWAY.

The Milwaukie papers give some account of the affairs of this Company, taken from a report of the President, Mr. Strong. The Company originally had a contract with Messrs. R. and G. L. Schuyler to complete the road some time in January 1855, and the funds for construction were raised by drafts on that firm. The report says :

The whole amount of drafts thus accepted, and upon which the Company has realized the proceeds, is - - - - - - - -	$137,000
Of which there have been paid by Messrs. Schuylers - - - -	67,000
Secured by attachment of their property, and to he paid by them - - - - - - - - -	10,000
Unpaid, and to be provided for by the Company - - - - - -	60,000
	$137,000

The Messrs. Schuylers have made an assignment of all their effects for the benefit of their creditors.

The Company have recently made a settlement with the assignees, the substance of which is that the contract is abrogated. The Company released all claim for the $77,000 which the Schuylers have paid and are liable to pay, as already stated ; and the Company surrender to the assignees $80,000 of bonds, which Messrs. Schuylers had already appropriated to their own use; viz : $30,000 in Iowa County Bonds, and $50,000 in Railroad 1st Mortgage Bonds, and all the other securities are surrendered up to the Company, being $120,000 of Iowa County Bonds, $450,000 of Railroad 1st Mortgage Bonds—and the Company assume the payment of the outstanding unpaid acceptances, amounting to $60,000.

The whole amount of expenditure by the Company up to this time, amounts in round numbers to about the sum of $175,000, which includes engineering, right of way, grading, bridging, masonry, ties, plank, salaries, printing, interest, discount, commissions and incidental expenses.

The funds to meet these expenditures have been provided as follows :

Stock subscriptions, about - - -	$23,000
Schuyler's acceptances - - - -	137,008
Unliquidated floating debt, about -	15,000
	$175,000

The present debt of the Company is about $75,000, of which $60,000 consists of the unpaid acceptances of R. & G. L. Schuyler, and the balance, say $15,000, is the unliquidated home debt of the Company.

It is estimated that about $70,000 will now complete the grading, masonry, and bridging of the road, and place it in a condition to receive the superstructure.

There has been subscribed to the capital stock of the company 1101 shares, upon all of which partial payments have been made, upon some only $5 per share, and upon others as much as $60 per share. If this stock were all to be paid in full, it would amount to the sum of $110,100, whereas, in fact, but $23,275 has been paid.

For tee purpose of raising the means to progress with the work, the Directors have adopted the plan of disposing of 2000 shares of the stock at $60 per share, giving to the existing stockholders the preference of taking the shares at that rate, on paying as much as the nominal amount of their subscription. If this number of shares shall be disposed of, at that rate, the sum of $120,000 including the amount already paid, will be realized, or $96,725 in addition to the amount already paid.

(Correspondence of the N. Y. Daily Times.)

Discovery of Railroad Depredations in Ohio.

SANDUSKY, Oct. 5, 1854.

For some time past extensive robberies have been practiced on lines of travel between New York and the Lake cities. Goods have been missed from the propellers at depots, and from freight cars. It has been known that these depredations were perpetrated according to a system in which a number of persons were engaged. Boxes of goods were missing, boxes have been broken open and parcels stolen, and many packages have never reached their destination. It was closely suspected several months ago that a party of the rascals who were carrying on this scheme had their head-quarters in this city. A large amount of goods has been missed from the Mad River Depot, and last week such developments were made as induced the Superintendents to set a watch. A shrewd employee, who could be trusted, was appointed to be on the alert, and he succeeded in entrapping half a dozen rascals.

About midnight six men entered the Mad River Railroad depot, with dark lanterns. The spy was on the *qui vive*, and followed them. They at once began operations by breaking open boxes. He managed so cautiously as to be able to get a view of their faces, and not only that, but got the names on the boxes they plundered. He took notes, also, of their conversation. When the labors of the night were over, they retreated from the scene of their depredations, and he followed, when accidentally be stepped upon a plank which slipped and made a noise. At once, one of the burglars cried, "If there is a man in this depot he is a dead man," throwing the light from his lantern, as he spoke, directly in the direction of the sound. The spy was in his stocking feet, and was well acquainted with the depot, and being a good dodger, kept out of the line of the lantern light. Two of the burglars, with revolvers in their hands, began to search the depot. The spy was unarmed, but he succeeded in secreting himself so safely that, though the burglars searched a long time, they did not find him.

On the following morning six arrests were made. Among the burglars were three out of one family—a father and two sons—all in the employ of the Railway Company. The two boys were check clerks. The other burglars were also employees of the Company. It is now ascertained that they have been stealing for more than a year, and have been in the habit of sending goods on the Lake, and to the towns in the vicinity. Through their arrest such information has been obtained as well lead to the arrest of parties at other places. No examinations have yet been had before a magistrate, and therefore I do not send you names. The papers of this place have not yet given particulars of the arrests, because it has been thought advisable not to advertise the detection of the Sandusky villains, lest those at other points elude officers sent in quest of them. But so much time has now elapsed, that whatever can be done will be done before the *Times* with this letter can circulate here.

CHARLES FRODSHAM'S

IMPROVED WATCHES!

BEGGS & SMITH,

JEWELERS,

No. 6 West Fourth St.,

Adjoining the First Presbyterian Church,

CINCINNATI, O.,

HAVE received from Mr. Simon Willard, Boston Agent for the United States, the sole and exclusive agency for the sale of **CHARLES FRODSHAM'S** NEW SERIES OF IMPROVED CHRONOMETER WATCHES, in the states of Ohio, Indiana, Illinois, Michigan, Iowa, Wisconsin, Missouri. Kentucky and Tennessee.

In the Watches of the New Series, Mr. FRODSHAM has succeeded by a more perfect method of compensation, a more correct adjustment in isochronism, and an entirely new and peculiar construction of the train, by which more power is obtained without increase of size, in producing timekeepers of wonderful and unrivalled accuracy. The great importance of the improved watches is a perfect regularity of time under every variety of climate, motion and position. So perfect are the adjustments, that the most violent exercise, such as horseback riding, jumping, etc., produces on them no sensible effect They are therefore, particularly adapted to Railroad purposes.

Liberty is given to refer to the following gentlemen, who, among many others, have proved the excellence of Charles Frodsham's Watches as timekeepers:

Gen. John S. Tyler,		Massachusetts.
John E. Thayer, Esq.		"
Enoch Train	"	"
E. C. Bates,	"	"
F. W. Thayer,	"	"
Wm. Whiting,	"	"
Geo. M. Thacher,	"	"
David Dyer,	"	"
Alvin Adams,	"	"
Billings Briggs,	"	"
David Weld,	"	"
Hon. Ebenezer Lane,		Sandusky.
E. F. Osborne, Esq.		Ohio.

The Prices of the New Series Gold Cases, are According to Size, viz:

SIZE 12	
" 14	$230
" 16	
" 18	250
" 20	275
" 22	300

Recommendations:

Boston, Sept. 3, 1853.

The Compensated Lever Watch I purchased of you, made by Charles Frodsham, London, No. 7300, has varied but thirty seconds from mean time in six months, by actual daily comparison with your regulator.

Yours, &c., ALVIN ADAMS.

Mr. Simon Willard.

Boston, Feb. 4, 1854.

Mr. S. Willard Dear Sir—The Frodsham watch, No. 7557, I purchased of you last October, has performed wonderfully well. I have compared it almost daily by your Astronomical clock, and its variations for ninety days is but one second, or a loss of but one-hundredth of a second per day. I consider it better than any Marine Chronometer I ever used.

Yours truly,
FISHER A. NEWELL,
Late master of Sch., Honolulu.

Sandusky, Ohio. Jan. 1, 1854.

Mr. S. Willard, Dear Sir—More than six months ago I purchased of you two of Frodsham's best watches—up to this time, one of them, No. 7571, has altered from mean time but twenty-seven secouds, and the other, No. 7517, but twenty-three seconds in the same period.

Yours, respectfully.
E. F. OSBORNE.

To Mr. Simon Willard.

Gentlemen—On the 1st of April last I procured from Mr Willard, of Boston, one of Frodsham's improved series of watches. It was regulated and set to Cincinnati time. It has not, in that period, been suffered to run down, nor have the hands been moved, and to day it is 20 seconds only slow. Respectfully yours,

HENRY O. AMES,
Sup,t Cin. Ham. & Dayton Railroad.

August 18, 1854.

To Messrs. Beggs & Smith.

The following is an extract from a letter of William Brown, Esq., Springfield, Ohio, engineer on the M. R. & L. E. R. R., who has personally kept the rate of several of Frodsham's watches.

"Finally from what I have known of Frodsham's watches, I am very strongly impressed with the idea, that they are a decided improvement on all other timekeepers, and were they set in gimballs and used with the same care, I think their performance would equal that of Mr. Frodsham's celebrated box chronometer, and would answer the same purpose for determining longitudes."

DENNEY'S DIVIDED CAR AXLE.

PATENTED JANUARY 31ST, 1854.

THE ATTENTION OF RAILROAD COMPANIES is respectfully invited to an examination of the merits of this valuable invention, which offers to add largely to the safety of life and property.

The valuable features of this arrangement of axle are, a saving of full fifty per cent. in motive power on crooked roads: the rails are protected from being destroyed by the flanges of the wheels coming in contact with them on the curves, as is the case with the stiff or rigid axle, which not only destroys the rail but puts a constant strain upon the wheel and axle, causing the wheel on the inner rail to trip or revolve upon the rail under the weight of the car and its load, while the opposite wheel is traversing its greater distance; the tendency of which, is to wear the wheel flat, and cause it, or the axle, to break sooner or later. There is less danger of the car leaving the track from its having become spread.

Axles fitted in this way do not require to be near so large, and yet contain more strength than the common axle, for the reason that the liberty given to the wheels, which allows them to accommodate themselves to the curvatures of the road, removes wholly the strain thrown upon the ordinary axle; and therefore, it requires no more strength of iron at any point between the wheels, than is contained in the bearings, which in the ordinary axle, is not more than one-third of the strength of the other portions of the axle.

The elongated bearing which forms the connection is so proportioned as not to wedge or become tight in the alloy, the wear being almost imperceptible, requiring to be set up not oftener than once in twelve months, by a slight tightning of the screw nuts. If, from long service, the alloy becomes worn out, it can be refilled, making it as perfect as when first filled up, and the gauge of the wheels will never become changed so as to injure the running of the car.

It is after a series of the most careful experiments, conducted through a period of time sufficient to test in the most satisfactory manner, the real merits of divided car axles, and a thorough and practical test in real service of over two years, that we now offer to Railroad Companies one that we are assured will give universal satisfaction in its operations, and both simple and cheap in its construction.

We are now ready to dispose of rights to use the above axle on the following terms: We guarantee full and perfect satisfaction by giving ample time to thoroughly test its merits, and will require no payment to be made until such satisfaction has been given. All applications to be made to

SAMUEL L. DENNEY,

TYLER DAVIDSON & CO.,

Agents for the

BOSTON BELTING COMPANY

India Rubber Machine Belting in any quantity, from 2 to 20 inches.

India Rubber Steam Packing;

Mixed	do	do	1-32 to ¾ inch thick.
Plain	do	do	1-32 to 1 inch thick.
Pure	do	do	

Pipe and Manhole Rings, all sizes;

Square or Rope Packing, do.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agent of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.

2d, They are a great deal cheaper.

3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations. This is a new and important invention. The coldest weather will have no effect on them whatever. They are warranted to remain as pliable, in the COLDEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils,-10 casks, assorted weights n w in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Leland's Superior C. S. Car and Auger Bitts.—All sizes.

Brass Kettles, and Sheet Brass, &c.—Brass Kettles, assorted from 6 to 30; Sheet Brass assorted from No. 0 to 30; Brass Wire, do do do.

Star Breast Chains.—Four casks of those superior double-linked Chains, just received.

Walker's Trace Chains.—70 casks of those superior goods, warranted full length and sizes, 8 to 20 links, straight and twisted, now in store.

American Anvils.—Eagle brand, faced with with cast steel, and warranted by the manufacturers equal to Armitage's Mousehole.

Plated Spoons.—Plain, tipped, and threaded heavy plate, on best quality of German Silver.

Premium Gimlet Screws.—10,000 gross just received.

Mill Saws. Hoe & Co.'s C. S. Wm. Rowland's, and W. H. Rowland's 6, 6½, 7, 7½, and 8 ft

Cross Cut Saws.—Hoe & Co.'s C. S., John ockerell's C. S. and G. S., Wm. Rowland's and W. & H. Rowland's 5, 5½, 6, 6½, 7, 7½, and 8 feet Also, 4 and 4½ feet Tennon Saws.

Axes—1000 doz. Axes, assorted Yankee and Kentucky patterns, first, second, and third quality

Nails.—4000 kegs Shoenberger's and Wheeling Nails, now in store.

NOTICE TO CONTRACTORS.
Mobile and Girard Railroad.

SEALED PROPOSALS will be received by the undersigned at this office, until the first day of December, for the Clearing, Graduation, Track-Laying, together with the building of all Bridges and Culverts of the Western Division of the Mobile and Girard Railroad, extending from Mobile to Greenville, covering a distance of 130 miles.

The work will generally be divided into one mile sections. and bids may be made for one or more of these sections. Separate proposals are desired for the Track-laying, building of Bridges and Culverts, likewise for the building of the Trestle-work, 5½ miles in length, across the Tensas and Mobile Rivers, with the intervening swamps. The trestle-work will be 12 feet high, built upon Black Cypress Piles, found in abundance and adjacent to the line; the two rivers will be crossed with the common Pile Bridging with Truss Pivot Draw in the center of each.

Specifications with the form of the contract and proposals can be had of the undersigned upon application.

Plans, profiles and estimates of that portion of the line are now ready for examination. Parties proposing will please designate it as such upon the envelope.

The country is healthy, with no swamps after leaving the Tensas River. From Mobile to the river, 18.5 miles the grading is light and country very healthy at all seasons of the year. After the line leaves the Tensas River, it passes through, and on the ridge that divides the Alabama and Conecuh waters, easy of access by the Alabama River, and through a section of country well stocked with provisions.

Payments will be made one-third (⅓) in current funds, one-third in the capital stock of the Company, bearing (.08) per cent. interest payable in stock, until the road is completed, then to cease and become common stock of the road, and relying upon the earnings of the same for dividends; the balance (⅓) one-third to be paid in the (.08) per cent. convertible bonds of the Company, maturing in (5) or more years, at the option of the contractors, coupons payable semi-annually either in Columbus, Ga., Mobile, Ala., or at New York, at the option of the holder.

To bidders personally unknown to the undersigned, bond and approved security will be required to an amount not exceeding (¼) the amount of the contract, for the timely and faithful completion of the same.

22½ miles of the road from Girard west, will be open for business the first of November, and 52 miles 9 months therefrom; it is the intention to have the entire line of 245 miles open for business early in 1858.

Sept. 28, 1854-9t. GEO. S. RUNEY.

Baltimore & Ohio Railroad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was opened to the Ohio River in the spring of 1853, and has already established a high character with the business community of the West. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of the country through which it runs, and its many admirable provisions for the expedition, comfort and safety of travelers, it has received such favor as a passenger road, (with its present connections,) as to show that it will become the preferred route for all portions of the West and South-West as soon as its further connections are formed by the completion of the Central Ohio, North-Western Virginia and other Railroads now rapidly finishing.

FOR PASSENGERS BY THIS ROUTE,

Through Tickets from all Parts of the West,

ARE NOW SOLD IN

Cincinnati, Louisville, Madison, Indianapolis, St. Louis, Chicago, Toledo, Detroit, Cleveland, Columbus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED

For Sending Travelers Direct to WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION

The fullest accommodations are provided. In motive power and Cars, the company has abundant resources, which are being further extended to meet the demands of Western Trade. In the dispatch and regularity of transpart, and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road connects directly in the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,

The numerous Steamers of the Parker Vein Line to New York and Boston, the Ericsson Steamers by Canal to Philadelphia and New York,

And various other Lines of Steamers and Sailing Vessels to the Eastern Ports, and to Richmond, Norfolk, Charleston, Savannah, etc.

J. B. FORD is the Company's Receiving Agent at Wheeling.

COLUMBUS PIQUA, AND INDIANA RAILROAD.

New route from Columbus, West and from Urbana, East.

On and after Monday September 19, 1853, two trains per day, (Sunday excepted) each way, will run on this Road, between COLUMBUS and URBANA. Will leave Columbus at 4.50 a.m., and 3.30 p.m.—arriving at Urbana at 8.12 a.m., and 6.14 p.m. Returning—will leave Urbana, for Columbus, at 9.15 a.m., and 3.00 p.m.—arriving at 12.05 and 6.55 p.m.

The 4.50 a.m. train, from Columbus, will connect with the night Express train from Cleveland and arrive at Urbana in time for the morning train north for Sandusky and intermediate points. Persons arriving by the morniug Cleveland and Zanesville trains can have a few hours at Columbus and leave by the 3.30 p.m. train—arriving at Urbana in time to get supper and take the 5.35 p.m. train for Dayton and Cincinnati.

The 9.15 a.m. train from Urbana connects with the morning train from Cincinnati and Dayton that arrives at Urbana 8.40 a.m.—arriving at Columbus at 12.05 p.m in time for the 1 p.m. train for Cleveland, connecting with the Buffalo and Dunkirk boats. The 3.00 p.m. train will leave Urbana on the arrival of the Sandusky train—reaching Urbana at 2.45 p.m.—and arrive in Columbus in time for the various night trains.

A line of Omnibuses will connect with the trains at Urbana for the conveyence of passengers to and from Piqua and Greenville over a good Macadamized road.

A. G CONOVER, Sup
Piq ua, Sept. 13, 1853. s29-tf.

Having also a large FOUNDRY connected with the establishment, orders for Castings are solicited, and will be filled with promptness.

Car Wheels of any pattern can be furnished on short notice. Double and single plate and Spoke Wheels of all sizes constantly on hand.

☞ Communications or orders must be addressed to
OLMSTED, TENNYS & PECK,
je.8-tf Louisville, Ky.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Reservoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.

The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.
WILLIAM SHERBURNE,

DESCRIPTION OF PLAN.

Fig. 1, of the above cut, represents the foundations, consisting of *Bank* and *Track Walls*, the latter made of cut, the former of hammer-dressed stone, with cut stone coping. The Track is bent of the ordinary T rail, spiked and leaded to the stone track walls. The Center Pier is made of cut stone, with a step for screw and pivot bolted to the same.

Fig. 2, shows the framing.

Fig. 3, is a side view of Main Truss, with the mode of gearing, including the mitre-wheels, iron crank frame, rack and pinion, foundations, pivot wheels and pedestals.

Fig. 4, gives a perspective view of rim, segments, decking, etc.

Fig. 5. is an end view of the main trucks, with pedestals and wheels.

Fig. 6, is a screw for pivot, 6 inches in diameter, working in a steel step through a nut for adjustment.

Fig. 7, shows a cross section of track wall, well, and pedestal

LOCOMOTIVE LANTERNS

of the most approved form, with true Parabolic Silver-plated Reflectors, Copper Cases, and in every way equal to the best manufactured in the country.

Orders from Railroad Companies in the West are solicited.

A. S. WINSLOW,

†m124] 9 and 11 West Second St. Cincinnati.

"GARDNER'S ROCK DRILL."

DESIGNED for Mining, Tunneling, Quarrying Use, and Rock Excavations of all descriptions, by the use of which a saving of 50 to 75 per cent. is made. This drill can be operated by hand, horse, or steam power, and works equally as well horizontally or at any angle, as perpendicularly.

A silver medal, the highest prize, was awarded these Machines at the World's Fair.

Applications for Territorial Rights and Machines must be made to the Patentee.

G. ARTHUR GARDNER,
Trinity Building, N. York.

Railroad Record.

E. D. MANSFIELD, - - - - - - Editor.
J. A. JAMES, W. WRIGHTSON, - - - Associate Editors.

CINCINNATI:
THURSDAY MORNING,.....OCT. 26, 1854.

E. D. MANSFIELD,

May be found at the office of the Railroad *Record*, 106 West Fourth-street, between Vine and Race, (north side) between the hours of 11 A. M. and 1 P. M.

REMOVAL.

The Office of the RAILROAD RECORD has been removed to No. **106** West Fourth St., north side, between Vine and Race streets, in the building occupied by the Cincinnati & Cleveland Short Line, the Cincinnati, Lebanon and Xenia, and the Cincinnati & Dayton Short Line Railroad Companies.

The location is in the very center of Railroad business, and but few steps from the Burnet House. Full files of railroad reports, maps, newspapers and other documents can always be found at this office, and it will always afford us great pleasure to give any information, and answer any queries on railroad matters, when in our power. We cordially invite railroad men from the country, when visiting our city, to honor us with a call, and avail themselves of the facilities of our office.

☞ **Orders for all kinds of Railroad Printing received and promptly attended to at the Office, No. 106 West Fourth Street.**

Railroad Printing.

WE have now attached to this office an extensive **Composition** and **Press Room** and **Bindery**, under the personal supervision of the proprietors of the RECORD. With confidence, therefore, we call the attention of RAILROAD OFFICERS and others to our extensive establishment, containing every facility for turning out superior work in any and every department of the PRINTING BUSINESS.

We are fully prepared to furnish **Railroad** and other **Reports**, with or without **Maps** or other **Illustrations**, gotten up at short notice and in superior style. Also, **Blanks of any description**, adapted to the wants of the various departments of the **Railroad service**, and to the wishes and tastes of the parties.

Also, **Railroad Tickets** and **Conductors' Checks**. Our patent **Card Press**, enables us to supply any demand at **Short Notice** and in **Unequalled Style**.

Also, **Blank Books**, ruled to any pattern, with or without **Printed Headings**, and bound in the most substantial manner.

With the numerous facilities for doing the **Best Work**, we feel no hesitancy in promising full satisfaction to all who may favor us with their orders.

T. WRIGHTSON & CO.,
Rail Road Record Office, 107 Walnut st. Cin.

RAIL ROAD ACCIDENTS.

Several months since, we gave the statistics of Railway accidents, and referred to the fact, that the greater number of accidents were caused by the fault (in some way) *of the parties suffering*, and beyond the control of the railway companies. This is not only the fact, but the proportion of them beyond the control of the companies is increasing, while those caused by the railways are diminishing. In other words,—railways are really increasing in safety—while the carelessness, and negligence of individuals remain the same. The following is the table of these proportions, as they are found to exist on the English Railways, during the last ten years.

	1840-'43.	1848-'51.
Deaths caused by accidents beyond the control of the Companies.	37,5	56,8.
Under the control of the Companies.	62,5.	43,16

Thus it appears, that the deaths among passengers, from accidents due to causes *beyond* the control of companies had *increased* no less than fifty per cent, during the last ten years,—while on the contrary, deaths from causes under the control of the company had *decreased* 30 per cent. In the same time, the proportion of the *whole* number of deaths had been reduced from 1 in a million to 1 in 2½ millions. This proves at once, that the safety of railway travelling at least, in England, is rapidly increasing;—but, that the great danger of accidents lies *in the individual passengers themselves*.—Travellers on rail-ways should ever remember, that, although a great accident, like that at Norwalk, fills one with fear and surprise; yet, the greatest number of passengers killed, or injured on railways, owe their injuries to *their own imprudence or negligence*. Of the accidents caused by the railways, and for which passengers are not blamable,—the greatest number are caused by *collisions, bridges, and running off the rail*.

In reference to these it has been proposed very ingeniously to apply the Electro-Magnetic Telegraph to their prevention. The details of this are contained in a little pamphlet prepared by Dr. Lawrence Turnbull, and Mr. McRea, civil Engineer.

One of the plans is to have a Telegraphic apparatus so arranged, as to ring a bell in the locomotive, informing the Engineer of the frail condition of a draw-bridge he may be approaching. Rail roads on the Atlantic, where they pass many draw-bridges over small arms of the sea, or rivers on tide-water, may avail themselves usefully of this invention. But, in the great interior, the simple Telegraph lines on the railway, connecting with each station, are by far the most important preventive of accidents. We are glad to see, that our great lines, such as the Little Miami, and Columbus, and Cleveland, are supplied with a Telegraphic apparatus at each station. All lines of considerable length should have them and have them attentively worked, at each station. The little work to which we have referred, contains some valuable suggestions to which we may hereafter refer.

PITTSBURG, MAYSVILLE AND CINCINNATI R. R. CO.

We are in receipt of an exhibit of the above road, from which we glean many interesting particulars.

The original design of the Company was, to construct a road from the Ohio, at Marietta, to the Central Ohio Road in Guernsey Co. This design was abandoned, and it was finally determined to locate the road through Harrison, Guernsey, Noble, Muskingum, Morgan and Athens Counties, to connect the Steubenville and Indiana Road, with the Marietta and Cincinnati Road, a distance of 110 miles, with the design of extending it to Pittsburg, on the one side, and Maysville on the other, as soon as necessity should demand it.

Thus far, the enthusiasm of the people on the line of the Road, has carried forward the work independant of other aid; $200,000 have already been spent, and there are yet $200,000 of local subscription to be collected. During the coming month, it is expected to have 10 miles of roadway graded, in another month, 16 miles from Central Ohio Road to Cumberland, and within two months $1,000.000 more as far as Washington.

The estimated cost is $2,640,000 of which it is expected that the local subscription will amount to leaving $1,640,000 to be provided for.

We are glad to see that the company have provided a sinking fund to be taken from the earnings of the road to meet any indebtness they may be forced to incur.

From the accompanying Geological reports we learn that there are extensive workable beds of the most valuable minerals, coal and iron, along the line of the road, beds of coal of eight, twelve and sometimes fourteen feet in thickness, and iron said to be the same as the famuos Blackband ore all in the same formation above water level. These alone, if properly worked, must furnish a local business which cannot fail to be profitable to the road.

☞ We learn from the Rochester *American* that the second track on the Buffalo & Rochester road is laid all but six miles, between Buffalo and Batavia, and that link will be laid by November 1st. Eight miles further, from Batavia to Byron, will be laid by January 1st. The second track of the Rochester & Syracuse straight line road will be laid probably by spring.

We regard this as a most valuable improvement. No road which does a business as immense as the New York Central should be without a double track.

We are happy to state that the work of laying double track on the Little Miami Railroad is progressing finely; 22 miles are already finished, and it is expected shortly to have the second track open to Morrow, 36 miles, where some important connections are made.

It is the intention of the Company to prosecute the work.

☞ Our neighbors of Canada are waking up to a true sense of the importance of railways to the growth and internal development of their country;

The following Railroad Bills have been introduced into their Legislative Assembly and passed to a second reading: Quebec & Saguenay Railroad bill, Belleville & Ottawa Railroad bill, Galt & Guelph Railroad bill, Stratford & Huron Railroad bill, Montreal & Vermont Railroad amendment bill, Mr. Langton's Peterboro & Port Hope Railroad bill. These for one session, will do very well, we have no doubt that every one of them is a needed improvement and will do much towards raising Canada to that commercial importance which it should enjoy.

☞ We learn from a communication to the Baltimore *American* that the people of Winchester, Va., are anxious to have the Winchester & Potomac Railroad extended as far as Strasburg, 19 miles, to connect with the Manassas Gap Railroad, with the design of ultimately connecting with the Virginia Central Railroad, and thence by roads through Tennessee to the Mississippi. The project has also been revived of selling the Winchester & Potomac Railroad to the Baltimore & Ohio Railroad Company, in hopes that the consolidation would be favorable to the early completion of the first-mentioned project.

Mobile & Ohio Railroad.—We learn from the Montgomery *Mail* that 66 per cent. of the entire road-bed is complete and ready for the track; 87 miles are finished and in use. Iron is provided for one hundred and forty miles at the Mobile end, 21 miles on the Columbus, Miss., branch, and 12 miles at Paducah, making in all one hundred and seventy-three miles. Strong hopes are entertained that the whole cost will not exceed the original estimate.

Cincinnati, Peru & Chicago Railroad.—We learn from one of the directors of this road that the work of grading on this road is progressing from Laporte to Plymouth, a distance of 30 miles, and that they hope soon to resume the work on the other sections of the road.

RAILROAD INFLUENCES.

The creative influences of railroads—their capacity to bring into activity the agencies which furnish their own support—is well exemplified in the "Pacific Railroad," running out from St. Louis to the western part of the State, *via* Jefferson City. But thirty-seven miles are completed and in operation. These thirty-seven miles terminate in the wood, some four miles from any of the principal roads of that part of the State, having traversed a broken, unsettled country. Its receipts were, for September of last year:

Passengers	$3,839 50
Freight	913 83
Total	$4,753 33

For the month of September, just past, the receipts were—

Passengers	$5,826 91
Freight	3,221 71
Total	$9,048 62
Showing an increase of	$4,295 28

Towns have been built along the line, and at one or two of them very considerable business is now done, where previously there had been none.

The St. Louis *Republican* has had the curiosity to compare the actual revenue with the calculations of the friends of the road when making the estimate of profits, and urging the people to engage in this enterprise. In the first report of the Engineer of the road, he submitted an estimate of the business from all points within seventy miles of St. Louis. He calculated upon a passenger travel of 32,000 per annum, or 2,666 per month. This estimate was considered extravagant at the time, and those who were anxious to avoid a subscription to the stock upon any terms, ridiculed the calculation. What is the actual result? The returns for the last month show that 9,901 persons passed over the road, so far as it is now finished, within that period; and the same rate of travel would make the annual transportation of passengers 118,812, for the first thirty-seven miles.—*Memphis Weekly Eagle.*

This is but the history of many of our important lines of railway, and it will always be the case that in proportion to the facilities for bringing to market the agricultural and mineral products of a region of country, the temptations which it offers to the enterprise of the restless of our own land and the immigrant from abroad, will increase. What but a lack of facilities for reaching a suitable market has left Northern New York, rich as it is in mineral and agricultural wealth, almost a wilderness? And what but railroad enterprise is now filling up that wilderness with sturdy and enterprising settlers? What but railroads is bringing to light and use at this present moment the immense and almost exhaustless deposites of coal and iron so long hid in the bosom of our own and surrounding States? It has been known for years that the mineral wealth of Ohio is almost unlimited. Our farmers in favored regions have dug their cellars in rich veins of coal underlying their possessions, and while they hoped that at some future period their lands would be valuable for their mineral stores as well as the intrinsic worth of their soil, yet it was not till railroads were pushed through their midst that they began to realize the value of the treasures which nature had lavished on them. Unquestionably railroads are exerting a life-giving influence all over our country, and we venture to predict that at no very distant day, every mile of this Pacific Railroad, pushed into the wilderness will amply repay the cost of its construction.

Terre Haute & Alton Railroad.—The Paris *Republican* thus chronicles the progress of this great thoroughfare:

Arrived—the cars at this place. The road, with some little exception, is now in good running condition between Terre Haute and Paris. The passenger cars are all ready, we understand, for a regular start, which, we presume, may be expected during the incoming week. A construction train is now regularly plying on the road, and our ears are greeted with the snort of the "Iron Horse," about three times a day. Those wishing to see the animal can now be accommodated with a nob-squint.

Lucky—the man that won $500 on the locomotive reaching Paris before last Monday. The animal came in on Sunday morning, frightened us from a delicious slumber, excited our denizens, scared off our neighbor's cows won the $500, and did'nt half try.

☞ The Earnings of the Michigan Southern and Northern Indiana Railroad for September, were:

Passengers and Mail	$153,664 09
Freight and Miscellaneous	77,775 86
Total	$236,139 93
Earnings in September, 1853	197,520 99
Increase	$38,618 96

This is larger than the estimate by some $20,000.

Communications.

AMERICAN AND FOREIGN RAILROAD IRON.

In a former article on "American and Foreign Railroad Iron," the reasons that have operated to prevent the extension of its manufacture in the U. States, have been shown to be—

1. The American iron-masters are fully employed to supply pig iron for castings and for making merchant iron.

2 Railroad mills require more capital, and where their pig iron is purchased at high prices, do not receive a profit corresponding to the pig iron manufacturer.

3. Large amounts of capital are not easily diverted in the U. States from the usual channels of business, very profitable and well understood by those owning or employing it.

4. The long credit given on railroad iron in England by mortgage bonds on the railroads, instead of money or short credit that has been required in the U. States, has drawn nearly all the calls for railroad iron in that direction.

5. Any extension of the manufacture of railroad iron in the U. States, must be by smelting the iron ore with stonecoal.

It is now proposed to show, that with suitable encouragement, the U. States, and particularly Ohio, can within a few years supply railroads with American railroad bars as cheaply as the Welsh bars are now furnished, and with as much credit on bonds, and after the works are well established, as cheaply, even if the duty be removed from railroad bars.

Of the resources of the United States in iron ores adapted for the manufacture of iron, there is no question.

To make railroad iron in competition with South Wales, our iron-masters must come into the market on equal terms as to *cost* and *credit*. To come into the market on equal terms as to *cost*, requires—

1st. Abundance of ores, cheap, and of easy working qualities.

2d Fuel and fluxes for smelting, abundant and contiguous to the furnaces, or at least cheap.

3d. Facilities for easy and cheap transportation and extensive distribution over the country.

To come into market on equal terms as to *credit* requires, 1st, that we should be able to deliver railroad bars at cost of transportation, duties and charges, on Welsh bars now paid for in money, as the cash payment; and 2d, receive the cost of production in railroad bonds for the balance of the market value of the iron.

Relative advantages of the East and West for production. In New York, New Jersey, Connecticut, Massachusetts, Vermont, and the Eastern States generally, the ores are very rich, and not so easily reduced as the ores of the coal fields of Pennsylvania, Ohio, Kentucky, and Western Virginia; or else the more easy working ores, such as the hematites and limonitii ores, can not have the advantage of cheap fuel for their reduction.

At many of the furnaces in the Eastern States, all the materials are brought from a distance, and the ores cost $3, $4 or $5, per ton, * charcoal 5,

* Ores delivered at the furnaces in Southern Ohio cost from 75 cents to $2,50 per ton, but the average of the best ores and the customary price is $2 per ton in the coal and iron district of Southern Ohio.

and 7 to 12 cents per bushel, * bituminous coal 25 to 30 cents per bushel, † and anthracite 16 to 19 cents per bushel, and at many places 25 to 30 cents per bushel. ‡

In Maryland, Pennsylvania, Ohio, Virginia and Kentucky, materials for the manufacture of iron are found in many places either immediately contiguous to each other, or in the immediate neighborhood, so that the coal, iron ore and limestone for smelting and manufacturing the iron, and the building materials and water are all most convenient for use.

Various circumstances modify materially the cost of the production of iron, among which the principal are—

1st. The cost of lands for furnace supplies.

2d. Qualities and quantities of ore and coal.

3d. Cost of stock at the furnace.

4th. Cost of labor at the furnace.

5th. Cost of provisions at the furnace.

6th. Easy and cheap transportation and distribution to various markets.

The advantages thus far in the iron manufacture in the U. States, have been in the southern part of the iron belt of Ohio, where the iron-masters have all, with a single individual exception, in a long course of years, and in all stages and fluctuations of the iron market, made money and grown rich.

The advantages for the future in the manufacture of railroad iron will, it is believed, be in Ohio, and for the following reasons, viz:

1st. The abundance and easy access of easy working, good iron ores.

2d. The abundance and easy access of good stonecoal and limestone.

3d. The small cost of stock at the furnaces.

4th. The cheapness and abundance of provisions.

5th. The railroad and water transportation to distribute the iron easily in every direction.

6th. The great amount of iron required in future years, will be in the West, the Northwest and Southwest, in the valleys of the Mississippi and other streams flowing into the Gulf of Mexico.

Sites for furnaces, stonecoal iron and railroad iron. The charcoal iron furnace sites in Ohio are already mostly occupied, or held in reserve for such use; but there are many sites adapted to the manufacture of railroad iron from stonecoal, that are still covered by their native forests, or are partially cultivated as farms, that are capable of producing iron for 50 miles of railroad per acre, or 3,000,000 tons to the square mile, with coal and limestone sufficient in the same lands, or very near, to make the iron. Furnaces can be so located in many places, that the ore and coal can be run from the mines by short tram roads of one-fourth to one-half mile in length to the tunnel head of the furnace.

The coal beds and iron ore beds in Ohio, lie in a nearly horizontal position, and above the level of the valleys, require little or no expense of drainage. Enough of these materials lie thus, to last extensive iron works many years, and below the levels of the streams are quantities to last for ages.

The face of the country in the iron belt of Ohio, is well adapted for getting the stock for the furnaces cheaply to the tunnel head. This is one great advantage over many of the Pennsylvania furnaces, which are situated in a more mountainous region, with deeper valleys, and steeper and higher hills.

Many bands of black, blue and gray carbonate of iron, like the black-band, and other ores of Wales, of Scotland, and of Staffordshire, abound in the southern counties of the iron belt in Jackson and Lawrence counties in Ohio, and the coal, limestone, ironstone fireclay and firestone, are associated. The resources may be considered practically inexhaustible, and Lawrence and Jackson counties are considered capable of supplying one hundred stonecoal furnaces, each making 4000 tons of iron per annum for ages of time.

Cost of furnaces and rail mills, to supply 500,000 of railroad bars per annum in the U. States. It has been estimated that the railroad iron production of the U. States in Massachusetts, New York, New Jersey, Pennsylvania, Maryland, Virginia and Ohio, for 1854, will be 160,000 tons. The wear and tear of railroads and the double tracks and switches, will require about 100,000 tons of railroad bars, by Mr. Mansfield's estimate, * which is not more than enough. Three thousand miles of new railroads for this year, and the same for some years to come, annually, will require 400,000 tons per annum.

The wants of the country will then require per annum	500,000 tons.
The production now reaches	140,000 "
The amount required to be produced or imported	360,000 tons.

This amount in whole, or in part, will require to be imported until our own works can supply the demand.

Stonecoal furnaces make, say, 20 tons of pig iron per day; at the rate of 20 tons per day and two hundred days in blast per year, each furnace would make 4,000 tons.

Three hundred and forty thousand tons of railroad bars would require about 400,000 tons of pig iron, which would require about 100 stonecoal furnaces to produce; and 25 rolling mills making 45 tons each per day, three hundred days per year, to manufacture into railroad bars.

100 stonecoal furnaces with coal and ore lands for their supply would cost, with fixtures, etc., at $40,000 each	$4,000,000
25 railroad mills complete at say, $80,000 each	2,000,000
The investment necessary to produce 337,500 tons	$6,000,000

The duties paid at the custom-house on railroad bars in 1853, was $3,721,600, and is estimated in the year 1854 will be, $4,000,000. It thus appears that the duties alone paid on railroad iron in 1 1-2 years, if invested in furnaces, lands and mills, for making railroad bars, would be sufficient fixed capital in iron works to produce in the U. States the quantity of railroad iron that is now imported, and bids fair to be annually required in all future time.

This amount of iron is now imported at an expense of about $12,400,000, paid in cash down, $16,000,000 in railroad bonds, which draw as interest $1,000,000 annually.

Estimated cost of stonecoal, pig iron, four hundred tons at one furnace in Ohio.

Interest on $40,000 investment in furnaces, lands, boildings, etc	$4,000
Taxes, incidentals, repairs, etc	4,000
10,000 tons iron ore at $2 to make 4,000 tons iron,	20,000
400,000 bushels coal at 5 cents* " "	20,000
2000 tons of limestone at $1 per ton, "	2,000
Labor about the furnace at $2 per ton	8,000
Handling, weighing and transport to rolling mill	4,000
Cost of 4,000 tons pig at rolling mill	$62,000

Or $15,50 per ton.

Estimate for converting pig iron into railroad bars.

Interest on capital $80,000 at 10 per cent. 13,500 tons railroad bars—per ton	$0,59
Wear and tear of machinery and repairs per ton,	1,50
Boiling furnace expenses per ton	6,00
Rolling into muck rolls per ton	0,50
Catching, hooking, dragging out and shearing per ton	0,37½
Piling, strapping, heating, rolling, catching drawing and straightening per ton	3,00
Sawing, trimming and straightening per ton	0,60
Coal 25 to 60 bushels, say 60, at 5, cents	3,00
Engineer, oil, and miscellaneous per ton	1,00
Incidentals, interest on floating capital, weighing, drayage, discounts, and extras of the boiling furnace	5.43½
Cost of converting pig into railroad bars about	$22,00†

The cost then of railroad bars at the depot or landing would be—

Pig at the rail mill per ton	$15,50
One-fifth loss in manufacture	3,10
Cost of making pig into railroad bars	22,00
Total cost of railroad bars per ton	$40,60

This cost of $40,60 per ton is upon the supposition that the furnaces are separate from each other, and from the rail mill, but that four blast furnaces and one rail mill belong to the same company. ‡

If the *furnaces and rail mill belong to different companies* the account would stand very different, and the pig would cost the rail mill company the market price of say $40 per ton

One and a fifth tons pig to make one ton railroad bars $48; manufacturing into one ton, $22, equals $70.

The margin for profit is thus seen to be less by far, not only relatively but absolutely, than for the blast furnace making pig iron, and explains satisfactorily, that so long as the iron market is not glutted with pig, there is comparatively little inducement to make railroad iron, unless the company own both furnaces and mills. The Eastern manufacturers are now in this situation, that the pig iron whether bought or produced, costs nearly

* The average price of bituminous coal in New York from 1821 to 1846 was $9,31 per ton, or about 33 cents per bushel. The cost of bituminous coal delivered at the works in the coal and iron region of Ohio is $0,75 to $1,50 per ton, or 3 to 6 cents per bushel, according to the situation of the works, near or more remote from the mines.

† The price of anthracite in New York usually ranges from $6,50 to $7,50 per ton, or 16 to 19 cents per bushel, and in Philadelphia has ranged from $7 to $4 per ton, since 1828. This year, coals of all kinds are dearer throughout the eastern slope to the Atlantic. Bituminous coal 22 cents per bushel at Philadelphia, Sept. 12; at Boston, same date, $8,25 to $9,25 per ton, 20 to 23 cents per bushel; New York, $7 to $8 per ton, 19 to 20 cents per bushel.

‡ Charcoal on the Hudson river at the furnaces is worth 12½ cents, and the timber, if sold for timber and for fuel, would realize that amount and more. The charcoal of the Berkshire county iron works and the Vermont furnaces, costs from 5 to 7 and 10 cents per bushel delivered. Charcoal at the furnaces in Southern Ohio has heretofore cost about 3 cents per bushel delivered, now with increased prices 3½ cents, and in some cases, 4 cents.

* Welsh bars, the wear and tear is found to be 4.1 per cent on the Schuylkill coal railroad. American, do. 1.0 per cent.

* Stonecoal at some of the furnaces would cost only 5 cents, and 2½ tons to 3 tons would perhaps be enough, equal to 62 to 75 bushels per ton of iron.

† The above details may not be accurate but the cost of conversion in the aggregate, is believed to be not far out of the way. The writer has had no recent opportunity of conferring with those engaged in this manufacture.

‡ If the furnaces are in pairs, the expenses of production would be diminished something more than a dollar per ton; and if all the four furnaces and mill be together the expense would be about $3 less, or about $37, 60 per ton of railroad bars.

$40 per ton, and tho Western manufacturers also that buy their pig iron, are in the samc situation.

Estimated annual production of four stonecoal furnaces and one mill.

Four furnaces making 4,000 tons each at $15.50	$248,000
One rail mill say from 16,000 tons, 13,500 tons rails	297,000
Cost of 13,500 tons rails at $40,37 per ton	$545,000
Sale price N. Y. quotations, lowest, $73,50	$992,250
" " " " $80,00	$1,080,000

At the above prices, the range of profits for snch a company, their works all separate, would range from $447,250 to $535,000.

It the works were together, the cost of the railroad iron would be about $37,60 per ton, allowing the cost of ore $2 per ton, of coal 5 cents per bushel; 100 bushels per ton of pig iron, and 60 bushels for converting into railroad bars. Iron men will allow these to be high estimates, and many localities will bear a reduction of ore from $1 to $1,50 per ton, and coal to 3 cents; which would reduce the cost $3,25 to $4,50 per ton of pig, and railroad bars $,4,45 to $5,70 per ton, and make railroad bars cost from $31,90 to $33,15, and stonecoal pig $10,75.

The sale prices of railroad bars in Wales, were, August 8th. £7, 15, £8, 5s, about	$38,75@$41,25
" 26th, £7,15, £8, 5s., about	$38,75@$41,25
In New York the quotations were August 23d, railroad bars,	$77.50@$80,00
September 2d, American railroad bars,	$77,50@80,80

It thus appears that in the Pennsylvania and Ohio coal fields, railroad bars can be made in favored localities at $31,90 to $33,15 per ton, and generally at $37,60 to $40,37 per ton, and the sale price be highly remunerative. It also appears that we can make iron, both pig and railroad bar, as cheaply as in South Wales.*

The range of Ohio stonecoal pig will be in Ohio, $10 to $15 per ton, cost.

Pig iron has been made in Pennsylvania, it is said, at less than $10 per ton, but this is about the minimum in the most favored localities, and I think was estimated as in Wales and Scotland, without counting interest and taxes on the capital, and incidental expenses of repairs.

The usual cost of Welsh and Scotch stonecoal iron may be considered as about $12 to $15 per ton, and tho present sale price in New York $38 to $40. In Pennsylvania and Ohio, such iron costs $12 to $15, and sells at say $40. but the expenses of sending these latter to a market are less than in the former, and to the advantage of the iron-master.

* *Cost of making pig iron.*

Total cost not reckoned on interest or capital.

Glasgow, Scotland, (Ure's Dictionary.)

	Tons.	Cwt.	£.	S.	D.
Raw iron stone, 4s.6d per ton, $1,00	3	10	0	16	3
Splint coal 2s. 5d. per ton, $0,54,	5	15	0	14	0
Limestone 6s., per ton, $1,32,	0	14	0	3	6
Coal for engine, $0,66,	0	00	0	3	0
Other charges, $5,22,	0	00	1	1	0
Total	10	9	2	17	9

Southern Ohio.

	Tons.	Cwt.	
Raw iron stone, $1,50 per ton,	3	00	$4,50
Coal, 100 bushels, or four tons at 3 cents, $0,75 per ton,	4	00	3,00
Limestone, $1,00 per ton	0	15	0,75
Other charges, labor per ton			2,50
Total			$10,75

In the Eastern States, foreign pig iron can not be bought for less than $40, neither can it be manufactured, either with stonecoal or charcoal, for much less than that price. Add to this, the expense of converting the pig into railroad bars, say $30 in the Eastern States, where coal, labor and provisions are high, makes the railroad bars cost about $70 per ton.

In the Eastern States, the railroad bars manufactured there, cost so nearly the price of Welsh bars, that if the duties be remitted, those railroad mills must close. It is not to be expected that in the Eastern States any great extension in the manufacture of railroad iron will take place in consequence of the cost of coal. In the anthracite region, and in the Frostburgh coal basin, and in the Tioga and Blossburgh districts which are intermediate between the Eastern and Western manufactories, rail mills will doubtless be established. In Pennsylvania and Ohio, where all the materials necessary for the manufacture lie together, in a rich agricultural and densely populated district, rail mills can make their bars at a less cost than any other part of our country—as cheaply and perhaps cheaper even than in Wales, as has been shown, ranging between $31,90 and $40, 37 per ton.

The remission of the duties on rail bars would not affect the Western manufacturer more than diminish his profits to the extent of the duty, and this would not be so seriously felt as to destroy his business, *if he owns and works his own furnaces and rail mill.*

If, however, the Western manufacturer buys his stonecoal iron at $40 per ton, or charcoal iron at $43 to $50 per ton, he has less advantage over the Eastern manufacturer, and in this case, he too, will be unable perhaps, during the fluctuations of the iron market, to make steady progress in wealth.

In Ohio where the facilities for production and distribution exist in an unsurpassed, and perhaps unexampled degree, iron companies should have at least four stonecoal furnaces and one rolling mill, so as both to smelt and manufacture their own iron, and they need fear neither foreign nor domestic competition, nor remission of duties, nor the fluctuations of the market. There is no part of the world known, that can produce cheaper iron, nor more tons to the square mile over an equal area, than Ohio. Twenty-five such iron companies as above alluded to, located in the iron districts of Ohio and Pennsylvania, would, with what is now produced, supply the present and the immediately prospective demand.

At the present ruling rates of railroad bars, $73,50 to $80 per ton, our iron-masters could afford to receive $40 per ton in railroad bonds, (a part of which they could discount or sell if they wished) and $31 to $33 in cash, which amount railroad companies now pay in cash for duties, shipping charges, agencies, commissions, etc.

Thus it is seen that we can make our own railroad iron, *if we will, as cheaply as in Wales*, and *with works in the Ohio and Pennsylvania coal field, our iron-masters can manufacture and sell on as good terms for railroad companies as the Welsh iron-masters, receiving bonds or credit*; and besides, *they can receive as profit the amount that is now paid by railroad companies for duties, freight, commissions, etc.*

The advantages are greatly in favor of the American manufacturer in the Alleghany and and Ohio coal field, if he will invest capital, and put his works in operation.

It has been shown before, that the duties alone paid to the goverument in a year and a half, $6,000,000, and buried for a time practically in the subtreasurer's vaults, would put in operation iron works sufficient to furnish for the futnre the present demand for railroad iron in the U. States. *The annual amount now paid in cash by railroad companies for duties, freight, commissions, etc., on imported railroad bars, is about $12,400,000; and this amount invested in such iron works for fixed and floating capital, would be sufficient to furnish the present and prospective demand for railroad iron in the U. States, entirely independent of foreign railroad iron. This can be done in three years.*

Why is it that this matter has not before been nnderstood? The writer's opinion is, that it was because our *capitalists, railroad company directors, legislators*, and some of our *iron-masters** did not understand onr RESOURCES, *their* AVAILABILITY, *nor the cost at which rail bars could be produced from stonecoal iron.*

The reasons addnced in the first part of the paper on the manufacture of railroad iron in the U. States, together with the above, are believed to be the true causes why we are not *now* independent of foreign manufactnred railroad iron.

Let our railroad compauies foster our own rail mills, and establish others, (which they can do at less cost for their iron thau to buy), what an impulse would be given to business of every kind. If the $12,400,000 now paid to government for duties, and to shipping interests and for ageucies, etc., annually, was put in circulation in Pennsylvania aud Ohio in the railroad iron business, giviug labor to thousands, and consuming much of the produce of our farms, and giving transportation to railroads, canals, and our rivers and lakes, more than a compensation for trausportation of agricultural products to Eastern markets thus diverted.

It is to be hoped that the preceding remarks may arouse the atteution of capitalists, aud of railroad companies, to the advantages of the U. States for the manufacture of railroad iron. Is it not a fine opportunity, that while the amount now paid in cash by railroad compauies, $31 to $40 per ton, will pay for producing the railroad bars, the manufacturer can receive $40 more per tou profit in the railroad bonds, which they can couvert into money if they choose; and with the duty retained could banish the Welsh bars even from New York; or with the duty remitted could compete on equal terms, even there?

The great advantage, however, of the Western manufacturers is looked upon as beiug for supplying the thousands of miles of new railway, and the wear and tear of the old, throughout the great Mississippi valley. The advantages for manufacture are here, and comparatively uear where wanted, with unrivaled facilities for distribution by 20,000 miles of river navigation, thousands by railroad, and 1000 more by canal aud slack-water.

I believe the points are established: 1st, we can

* Most of our iron-masters have made only charcoal iron, and those few making stonecoal pig, could get a good price for their product, with little investmenl o f capital.

furnish railroad bars as cheaply as the Welsh bars are now furnished; 2d, also with as much credit in bonds; 3d, we can furnish railroad bars as chea[illegible] as Wales, even if the duty be remitted, and still with a good profit. W. W. M.

CLEVELAND AND CHATTANOOGA RAILROAD.

In our last we gave notice that the location of this Road had been completed, and that a transfer of the charter would soon be made to the East Tennessee and Georgia Railroad Company, preparatory to placing the line under contract.

As this Road was projected with a view to the travel between New York and New Orleans, as well as forming a more direct communication between East Tennessee and Nashville and the west: we deem it appropriate to speak of the progress that is making upon the different sections forming the great line between New York and New Orleans. First, then, we may say that the East Tennessee and Georgia Railroad, between Loudon and Knoxville is in a forward state of completion, and will be completed in a few months. The East Tennessee and Virginia Road, extending from Knoxville to the Virginia line in the direction of Lynchburg, is steadily progressing; much of it is graded and the cross-ties provided—and the work of laying the track will commence immediately upon the arrival of the Iron. The Virginia and Tennessee Road, extending from Lynchburg to a conjunction with the above Road at the Virginia and Tennessee line, is completed to within 15 miles of Wytheville, and much of the grading from that place to the line is done.

From Lynchburg the Orange and Alexandria Road extending to Washington is progressing. From the following item from the *National Intelligencer*, it will be seen that the people are moving:—

"Amherst, (Va.) voted in favor of $50,000 to the Lynchburg, Orange, and Alexandria Railroad. The directors will put sixty miles under contract as soon as the subscription is secured."

On the other end of the line, from Chattanooga to New Orleans, the N. E. and S. W. Alabama Road forming the line yet to be completed, is under favorable auspices. The following from the Tuscaloosa *Monitor*, shows the progress making by Dr. GARLAND, the energetic President of this Road. The *Monitor* says:

"It is with great pleasure we learn that subscriptions have been obtained to an amount sufficient to grade and cross-tie the road from Chattanooga down to Tuscaloosa, with the exception of twenty miles, of which thirteen are in Jefferson and seven in St. Clair. The Dr. starts back to those counties on Wednesday the 13th, to make up these deficiencies. Thus it appears that this great work is steadily progressing in means and in the favor of the public, and already it can be looked upon by unprejudiced minds in no other light than a certainty."

VINCENNES AND TERRE HAUTE RAILROAD.—There are thirty-five miles of this road now completed and the iron is being laid at the rate of four miles a week. It is supposed that it will completed through by the 1st of December.—*Vincennes Gaz., Oct.* 18.

ILLINOIS ITEMS.—The Terre Haute and Alton Railroad is completed to Paris.

E. I. & C. Straight Line Railroad.

The work on this magnificent enterprise is going ahead finely. A large number of laborers are employed, who are promptly paid up, and the force is being increased.—Messrs. Carpenter, Alvords & Company met week before last their heavy estimates for work done on the first division of the road, promptly with cash. The grading of the division of the road between this city and the crossing of the Ohio and Mississippi railroad, fifty-four miles, will be completed in a few months, if the same spirit and labors are continued which are now doing such effectual work. Mr. Carpenter is giving the work his personal supervision, and the grass is never permitted to grow under his feet, nor under the feet of those in his employ. He is pushing things along with his wonted indefatigable industry and energy.

The State Journal thus alludes to some specimens of coal in the office of the Company at Indianapolis. This road will run through an inexhaustible coal region:

The specimens of bituminous cannel coal, from the inexhaustible deposites of Pike and Gibson Counties, on the line of the E. I. & C. Straight Line Railroad, in the office of the Company, we understand, compare favorably with the Pennsylvania, Cannelton and Hawesville coal of the same character. These valuable deposites, we learn from a gentleman who has recently visited them, are from eight to twelve feet of solid structure, and of easy access from the line of the railroad. These coals must become of much importance to our city, as well as to the local business of the road, when it shall be completed.—*Evansville Weekly Journal, Oct.* 18.

Memphis and Ohio Railroad.

Pursuant to notice the Stockholders of the Memphis and Ohio Railroad met at Brownsville, Haywood county, on Monday, the 2d day of October, 1854.

The convention then was organized by the appointment of Geo. L. Holmes, of Shelby, as Chairman, and J. T. Trezevant, of Memphis, as Secretary.

The reports of the President and Secretary of the Company being called for were read, and on motion of

Dr. Bond, of Shelby, they were received and adopted, and the Secretary of the Company was instructed to contract for the printing of 500, or more, copies in pamphlet form, and to mail one copy to each Stockholder.

The convention then proceeded to elect fifteen Directors for the ensuing twelve months; and upon counting the ballots, the Secretary found the following gentlemen returned as Directors, to wit:

R. Topp, W. B. Miller, J. W. Fowler, G. L. Holmes, S. Bond, F. Titus, A. Woodruff, T. C. Crenshaw, G. T. Taylor, J. B. Stanton, W. H. Loving, R. F. Maclin, M. R. Hill, E. Gwinn, B. C. Brown.

The convention then adjourned.

G L. HOLMES, Pres't.

J. T. Trezevant, Sec'y.

Weekly Eagle & Enq. Memphis Oct. 10.

BALTIMORE & OHIO RAILROAD.—The regular monthly meeting of the board of directors of the Baltimore & Ohio Railroad has been held. The official report of the business of the road for the month of September, shows, that the revenue for the month has been as follows:

	Main stem	Wash. branch	Totals.
Freight.....	$246,185 30	$ 9,069 78	$255,195 08
Passengers.....	62,181 81	28,866 23	91,051 04
Totals.....	$308,370 11	$37,885 01	$346,246 12

CENTRAL OHIO RAILROAD.—Through the politeness of the superintendent of the Central Ohio Railroad, we have received the sixth annual report of the directors of the road to the stockholders, which presents a highly gratifying aspect of its affairs, during the past summer, and promises a most prosperous future. We cut the following brief synopsis of the earnings of this road for the year ending July last, and its abundant facilities for doing business the current year:

"Until April 28, the number of miles in operation was 58½; since that time 84 miles have been worked, making an average of the entire year of say 65 miles. We have transported during the year, 110,646 passengers, from whom we have received $99,064 98½, 34,721 tons of freight, $45,221 15; for mail service $11,967 60; for express, $1,165 76½. Total earnings for twelve months, ending July 31, 1854, $157,410. This sum does not include the earnings of July, 1853, amounting to $12,436 09.

"The company own 18 locomotives, besides 12 first class passenger and 12 first class freight engines, now under contract, making 42 engines, which it is thought will be sufficient to meet the increased business of the coming year. On the opening of two roads the company will also have 26 first class and 9 second-class passenger, and 13 baggage and mail cars, besides 310 freight cars now on hand, which number will be increased to 811 by those now under contract. This will give a rolling stock sufficient to do all the business that will probably seek the line within the first year, and will be a larger amount of stock than is owned by any Western road of the same length."—*Richland Shield & Banner.*

C. O. R. R.—Yesterday afternoon, Superintendent Fulton, with Mr. Clemens of the Little Miami Railroad, R. Neil, Esq., of Columbus, Mr. Raguet of Texas, and several citizens of this city, made an excursion to Barnesville by the C. O. R. R.

Only about seven miles are yet unfinished, and this is ready for the iron. We may safely calculate that the passenger and freight trains will run through to Bellair by the first of November. A large portion of the road is already ballasted, and by the time a through connection is made, there will only remain some twenty or twenty five miles for ballasting. For a new road, the track is remarkably smooth. Returning, the cars came from Barnesville to Zanesville in three hours, a distance of about fifty-two miles, and with one or two exceptions, there was no jolting or jarring even with this speed. We doubt whether any other road, on which the track was laid as speedily as this has been, can present an equal show.—*Zanesville Courier, Oct.* 19.

CINCINNATI AND MACKINAW R. R.—At the annual meeting of the Stockholders of this road at Greenville, on Wednesday, the following gentlemen were chosen Directors for the ensuing year:

John P. Cook, Hillsdale, Mich.
J. E. Bebee, Jackson, "
John W. Kirk, Cincinnati.
Wm. Gunckel, Germantown.
Hiram Bell, Greenville.
B. Frisbee, Van Wert.
P. Depuy, " "

The board was subsequently organized by the election of Wm. Gunckel as president, and John W. Kirk as secretary.—*Weekly Gaz Dayton, Oct.* 21.

Columbus Piqua and Indiana Railroad.—The first train of cars passed through from Columbus to Piqua, over this road, on Monday last. In company with a goodly number of our citizens, we went over to Piqua on Monday afternoon, and returned the same evening. The ride was very pleasant, and the company seemed to enjoy it very much. The road, for a new one, runs very well. When properly ballasted, it will make one of the finest running roads in the world.

We had but a short time to examine the young and prosperous city of Piqua. We regretted this the more, as this was our first visit to the place. It looms up finely along the banks of the Miami, and presents quite a city appearance. It appears to be in a flourishing condition, both as regards its improvements and business. Now that we are placed in railroad connection with our neighboring town, we hope to become better acquainted with it and its citizens.

St. Paris is the principle town through which the road passes between Urbana and Piqua.—It is rapidly improving, and presents a very neat appearance from the cars, which pass immediately south of it.

Our Columbus road is now doing a fine business, both in freight and passengers, and when opened through to the Indiana State line, cannot fail to secure a large amount of the through travel, East and West. We predict that it will make one of the best paying roads in the State.

The whole line from Piqua to Union, is graded, the bridges built, and ready for the iron, and will be pushed through as fast as men and money can drive it. If there is no delay in the receipt of the iron, and the winter should prove favorable for operations, there is nothing in the way to prevent the completion of the road early next spring. —*Urbana Citizen & Gaz. Friday, Oct. 20th.*

Astonishing Developments.—The Adrian Mich., *Expositor* says a man named Augustus Stuart Byron McDonald, was convicted in that city for an attempt to murder an engineer, by placing obstructions upon the Michigan Southern railroad. During the progress of the history of the case, it has been ascertained that a giant plot for wholesale murder and robbery was planned, and it is supposed that the names of the men engaged in it are known. This McDonald claims to be a son of Lord Byron, and that his mother's name was Mary Stuart, that he was born in Edinburgh, has been an assistant surgeon in the British army, has lived near Kingston, was in our army in Mexico as 1st lieutenant of dragoons, has been the world over, and that at Detroit last winter certain propositions were made to him to engage in the business of throwing trains from the track for the purpose of robbing the mails and express. The locomotive was thrown from the track near Adrian, in March last, and the print of a peculiar boot was found. McDonald pretended to make disclosures to the officers of the railroad as to the existence of the gang, and it is supposed he intended to get pay from the company, and at the same time in fact make no exposure of any avail. Finally, the government agent arrested McDonald, and got hold of his boots, which answered to the tracks, and McDonald was thrown into prison. Deputy Sheriff Beek, of Milwaukie, was thrown into the same cell, as express robber, and sweat it out about four weeks, spending one half his time with McDonald, and the other half, as he pretended, in his dungeon. Beck did this to get some confession out of McDonald, and finally succeeded in gaining enough to convict him. The gang apparently extends to New York; in fact, an accompliee is supposed to be in the New York Post Office, from whom it could be known when valuable letters went in the mail. Byron, *alias* McDonald, has—as is supposed—given the names of his confederates: he, however, has been sentenced to imprisonment for life.

Pee DeeBridge.—The bridge over the Pee Dee River, on the line of the Wilmington and Manchester railroad, is completed. The regular passenger train passed over it on Tuesday last, going North and South.—*Charleston Mercury, Oct. 12th.*

Grand Trunk Railway Traffic.—The following extract from an official letter from Sir Cusack Roney, dated Portland, Maine, August 31st, 1854, will be read with interest:—

"I have just had the enclosed telegraph of our traffic. It is the first time we have touched £5,000 currency. £5,016 currency is £4,140 sterling.

"I have no doubt of our traffic steadily improving. If we only had rain for 48 hours, of which there is some appearance, all the mills would be set going, but in this district there hasnot been any, except for half a day, since the 9th of June last.

"The traffic between Boston and Montreal, aia Portland, is steadily on the increase, for the public are beginning to appreciate the advantages of our punctuality and our fixed rates for every description of traffic, both of which are very little known on this continent. Last week we established a through rate between Montreal and Cuba, via Portland, and inthe course of next week, we shall have the first two cargoes of molasses and sugar (of about 800 tons weight) under this arrangement.

'In anticipation of the reciprocity treaty, large arrangements are in progress between Nova Scotia and New Brunswick with the State of Maine and Canada, of which Portland will be the centre. They will gradually develope to very great importance; so that the more I see, and become familiar with the business operations of our district, the more I am convinced of the correctness of the views I ventured to express shortly after my arrival in Canada this summer. It is true that the cholera, the heat, the drought, have upset my immediate calculations, but real value of the line is not altered by these transient, though for the time fearful visitations of Providence.

I am in hopes that at an early date, the British mail between Boston and Canada East will be sent over our line. The old route is so irregular, that the greatest dissatisfaction prevails. When the Quebec and Richmond line is opened, Quebec will gain 61 hours over the present arrangement in the despatch towards England, and about 86 in the receipt of letters from thence.

Steubenville and Indiana Railroad.—This work has steadily gone forward in the midst of all the difficulties in its path, and is now approaching completion. The last tunnel on the road has been completed, and passenger and freight cars have passed through it. Fifty miles of track are laid west of this tunnel, and forty-two east of it, making in all ninety-two miles. In a few weeks the work will be finished to Newark. In the meantime the road is open to Dresden.

When the Pittsburgh and Steubenville road is finished we shall have direct communication with this large region by railroad; but in the meantime, a good business will be done by steamboats to Steubenville.—*Pittsburgh Weekly Gaz. Oct. 19*

Nashville and Louisville Railroad.—The stockholders of the Nashville and Louisville railroad held a meeting Monday last, and elected a Board of Directors for the ensuing year. The following persons were elected: Curran Pope, Wm. Riddle, Wm. Garvin, John Joyes and Jas. Speed, of Louisville; John L. Helm, of Hardin county, and Mr. Quigley, of Bowling Green.

Lewis L. Shreve, the President, and Messrs Newcomb and Underwood, of the old board, were left out.—*Weekly Eagle & Enq. Memphis, Oct. 10th*

The Illinois Central Railroad.—The Chicago press says that this stupendous undertaking will be entirely completed in six months, constituting the basis of a system of railroads in Illinois scarcely surpassed in the world. At Lasalle, the bridge is completed, and was successfully passed last Monday by a train of cars.

Latest Mail Gleanings.—The *Prairie City* says that a large break occurred in the Wabash and Erie Canal on Friday last. One hundred and fifty feet of the bank gave way. Some ten days work will be needed to repair it.

FOREIGN ITEMS OF SCIENCE AND ART.

Purification of Fixed Oils—Especially Olive Oil for Watchmakers.—The colorless olive oil which is used by watchmakers is exceedingly dear, and yet the process of its purification appears to be so simple that any watchmaker may prepare it himself. If common olive oil be mixed with an equal quantity of very strong spirits of wine (sp. gr. 0.853) and allowed to stand for about fourteen or fifteen days, during which time it must be repeatedly shaken; already, in the course of a few days, the yellow color of the oil begins to disappear, and then gradually fades, until, at the end of the period mentioned, the oil becomes colorless. If the mixture be exposed to the direct action of the sun, this change takes place much more rapidly. The under layer of oil is separated from the spirit, which floats upon it, and is preserved in well-closed bottles (stoppered, or with plugs of wood or gutta-percha); the spirit may also be preserved for another operation—or if large quantities be employed, it may be distilled after each operation. The removal of color is not the only advantage which is gained by treating olive oil with alcohol, for a considerable quantity of the margarine which it contains is also dissolved out, and hence oil so treated will not solidify so readily as the raw oil. The process just described, and which is undoubtedly better than treatment, first with sugar of lead, then with sulphuric acid, washing with boiling water, and drying with chloride of calcium, or any other of the processes in common use, is applicable, more or less, to all other oils, even to coarse fish oils. It may be of importance to painters in oil, who are anxions not to injure the delicate tints of ultramarine, rose scarlet, and other delicate shades of red, and in fact of all pure tones, that linseed oil, even the darkest and muddiest, may be so far bleached as to become bright and clear, and have only a slight yellow tinge; a good deal of oil is now purified in this manner in Great Britain.—*Polytechnic Journal.*

New Way of Stopping a Railroad Train.—On Friday morning, as the train of the Merrimack and Connecticut River road (running from Manchester to Hillsboro' bridge thirty three miles) was leaving Manchester, an officer stepped forward and put an attachment on the engine and cars. The attachment, though only a small piece of paper a few inches in length, was made to stick on the locomotive, notwithstanding the spitting and sputtering of the steam. It appears that nine suits amounting in the aggregate to $50,000 have been brought against the corporation for debts contracted by the New Hampshire Central, which was merged in the Merrimack and Concord some time since. The Eastern road sues for $30,000 The Manchester Mirror states that the Merrimack and Connecticut road had been leased to the Northern and that "the probable object in bringing these suits was to prevent the deterioration of the personal property of the road by the Northern. Perhaps the Northern will receipt for the property. If so, the trains, will recommence running as usual."

The New Directors.—The following are the names of the new Directors of the Baltimore & Ohio Railroad Company. They were elected on the Reform Ticket, and are understood to be favorable to dividends: Columbus O'Donnell, Chauncy Brooks, John Hopkins, Nathan Tyson, Benjamin De Ford, Edward Patterson, Andrew Gregg, William A. Hack, Marcus Dennison, Francis Burns, Wesley Starr, and William Lamping.—*Phil. Inq.*

Ohio and Indiana Railroad.—On Monday evening last, October 9th, the track-layers reached the State line of Indiana, and threw up their hats in honor of so gratifying an event. There is now a continuous railroad from Pittsburg to that point, spanning the great State of Ohio. Three miles and a half of iron remain to be laid to connect Pittsburg with Fort Wayne. In a few days the road will be opened to Fort Wayne.—*Louisville Courier, Oct. 19th.*

MONETARY AND COMMERCIAL.

In New York we learn that the Money Market continues very stringent, and that the utmost caution is exercised. The net deposits in the Banks have again decreased this week; this is probably owing to the difficulties in the up town Banks. The trials of the new Banks have been severe, but they have generally been more prompt in their settlements at the clearing house. The defalcation at the Ocean Bank of $75,000 has caused considerable uneasiness. The developments in the Knickerbocker have not tended to allay this feeling.

The New York "*Shipping List*," of Saturday, says:

The increased stringency in the money market noticed last week, has since been apparent, and the applications at the Banks and discount-houses, have been numerous, though the rates of interest are no higher. At the close, there was rather more buoyancy of feeling, caused by the decline in Exchange, and the prospect of some falling off in the specie exports. We quote:—

Loans on call	6@ 7 ℘ cent.
Prime 60@90 days paper	10@12 "
Prime 4@6 months paper	15@18 "
Railroad paper	15@20 "

The suspension of one or two small up town Banks, and the discovery of a large defalcation in the Ocean Bank ($75,000.) by the late paying teller, have been the most exciting topics of the discussion in monetary circles during the week. The Knickerbocker and Eighth-Avenue Banks, which are reported to have failed, belong to that class of institutions which were ushered into existence during the "flush times" of 1852-3—without any recognized necessity for their establishment, in the first place, and in the next place without obtaining such a hold upon the confidence of the business public as to make their stoppage now, matter of serious concern. As adding to that feeling of distrust, which has so powerfully obtained of late, however their, embarrassments and their result are, notwithstanding, circumstances to be deprecated. We are glad to learn that the credit of the Ocean Bank suffers in no respect from the dishonesty of one of its employees.

It is probable that the prolonged paper taken for goods last year, falling due later than usual, will keep up the demand for money to a later period than was the case last year. Thus far the payments have been met punctually.

The demand for Exchange has been fair; we quote London 60 days at 109¼@109⅝.

The Stock Market has exhibited no signs of speculation. There is, however, a disposition among leading operators to "bear" the market with Erie & New York Central. The demand for good stocks for Europe is fair.

Sales by Albert H. Nicolay, sold Oct. 19. 1854:

$20,000 New Castle and Richmond Railroad 1st mortgage 7 per cent. Convertible Bonds, dated 25th of Feb., 1852, and redeemable 25th Feb., 1867; Interest Coupons payable at the office of the Ohio Life Insurance and Trust Company, in New York, 25th Feb., and 25th August. ($1,000 each at 5@86 and int.

Since our last we can not quote much change for the better. The run on our Banks has ceased, and there is at present more confrency in the hands of Bankers and Brokers than for sometime past. This, however, is of little service to the merchant as it is reserved to be sent home. Confidence seems generally disturbed. The Banks have discounted to some extent for those whose paper was already in their hands, but in general, no loans have been negotiated. The business in the street has been very little or absolutely nothing. Notwithstanding these difficulties we hear of but few failures and those not extensive concerns. We quote rates of interest on short paper, first class, at 12 per cent., but those who have money to loan, generally ask between 1 and 3 per cent. per month.

The currency question is becoming more settled, much of Indiana paper has been taken up, and we doubt not that more will be redeemed as it is sent home.

The Indianapolis *Journal* gives the following list of securities deposited by the Free Banks with the Auditor:—

Indiana	5 per cents	$2,366,006
Do	2½ "	698,780
Virginia	6 "	2,750,000
Louisiana	6 "	736,000
Kentucky	6 "	97,000
Georgia	6 & 7 "	89,000
Missouri	6 "	546,000
Tennessee	6 "	25,000
Michigan	6 "	26 000
North Carolina	6 "	186,000
Pennsylvania	5 "	271,000
Ohio	6 "	71,000
		$7,821,780

The Indiana 2½ taken 50 to 55.
Pennsylvania 5's taken 84 to 86.

Within sixty days between $900,000 and $1,000,000 have been withdrawn from circulation by the different banks, and the securities withdrawn. The Auditor says "the holders of the securities thus taken up, were offer-

ed par value for them, within a week, and over one hundred thousand dollars of them have been bought in by the State, and paid for in gold. Of the security to the holders of Free Bank bills, afforded by these bonds, everybody can easily judge for themselves."

It was reported some days ago that the New York Stock Bank of Vincennes had refused to respond to calls made on it, for coin or exchange, in reference to this the Vincennes *Gazette* of the 18th says:

This is entirely false, without a particle of truth, and without even a shadow for foundation. This Bank is, and has been, doing a home, a fair and legitimate business; is well and ably managed, and possesses the entire confidence of our business men. In no instance has it hesitated to pay coin or exchange, at the option of the holder of its notes; and it is, and always has been amply provided to meet all demands upon it. We know of no similar institution more safe or more responsible.

The notes of this bank and also of the Steuben Co. Bank, are taken at par by our Banks. We have heard, however, of several cases where they have been sold to Brokers at a heavy discount. We see no reason for the panic which exists in regard to *all* Indiana money, and the history of the last few days shows the unnecessary sacrifice which the timid are always too quick to make. Brokers, whose business it is to make money out of monetary transactions, are always ready to buy uncurrent bills as low as they can get them, and this is sometimes governed by the competition among themselves; but it is certainly unwise to submit to an enormous shave, before it is determined whether the note is good or bad.

With reference to the Savings Bank of this city it is expected to re-open in ten days or two weeks. The Bank of Connersville is also expected to resume. The notes of this bank are secured by State stocks, some of which are above par. The depositors are said to be small in number and well secured.

The Kentucky Trust Co. will close up, and has already been put in the hands of Trustees, who were not heretofore connected with the Bank. They are Judge W. B. Kinkead and Samuel J. Walker, Esq. John W. Stevenson, Esq., is selected as attorney. It is designed, if it can legally be done, to pay first the depositors either in whole or in part, and then billholders. Under this arrangement the billholder is expected to receive 80 cents on the dollar.

We quote stocks as suffering for want of currency; the market in consequence exhibits a depressed state of feeling.

The market for Eastern Exchange was quite unsettled during the excitement of the week, it is firmer at 1@1¼ premium.

RAILWAY AND CANAL TRAFFIC

GALENA AND CHICAGO RAILWAY.—The following are the earnings of this road for the month of September, in the years 1853 and 1854:

	1853.	1854.
Freight	$52,859 20	$ 90,475 86
Passengers and Mails	35,681 96	59,525 41
	$78,541 26	$150,000 28

Increase, $61,459 01.

NEW YORK CENTRAL RAILWAY.—The following is a comparative statement of the receipts of this road during the month of September, 1853 and 1854:

	Passengers.	Freight.	Total.
1854	$375,821 53	$265,263 75	$640,535 28
1853	371,332 06	217,532 91	588,864 97
Increase	$3,980 47	$47,730 84	$51,720 31

GREAT WESTERN (CANADA) RAILWAY.—The earnings of this Company on 241 miles of road in operation, for the week ending October 13, 1854, were from the following sources:

From Passengers	£8,312 12 9½
From Freight	1,508 7 11
From Sundries	211 9 1
Total for the week	£10,232 9 9½
Amount of previous receipts	59,221 4 3
Total receipts since the 1st of August	£69,353 14 0½
Total number of passengers since the 1st August	116,945

RAILWAY NEWS ITEMS.

The following is the list of the Board of Directors of the Erie Railroad Company: Homer Ramsdell, Samuel Marsh, Wm. E. Dodge, Shepherd Knapp, Cornelius Smith, Marshall O. Roberts, Charles M. Leupp, Nelson Robinson, Daniel Drew, John Arnot, Ambrose L. Murrey, Geo. F. Talman, D. A Cushman, Wm. B. Skidmore, Lewis Von. Hoffman, Chas. Moran, Ralph Mead. The retiring members are Messrs. Thomas J. Townsend, Gouverneur Morris, Henry Sheldon, and Alanson Robinson. Mr. E. C. Weeks, one of the old board, recently deceased. The report of the investigating Committee has been made and will be published in our next.

MICHIGAN CENTRAL RAILWAY.—The earnings of this road for September, 1853 and 1854, compare as follows:

	1853.	1854.	Gain.
Passengers	$104,445 77	$135,846 87	$31,401 10
Freight	74,629 03	81,550 20	6,921 27
Miscellaneous	3,525 00	7,828 56	4,313 56
Total	$182,599 80	$225,235 73	$42,635 93

NEW-CASTLE, Ind., Oct. 20.

FORT WAYNE AND SOUTHERN RAILROAD.

The annual election of this company was held at Muncie on Wednesday, the 4th inst. The Board, as elected on that occasion, consists of the following persons: Wm. J. Holman, of Muncie, Joseph Holman, of Wayne, Wm. Rockhill, of Allen, John Studebaker, of Wells, Dr. Cassil, of Blackford, —— Carter, of Delaware, E. T. Hickman, of Henry, P. A. Hackleman, of Rush, I. T. Gibson, of Decatur, B. Phillips of Jennings, E. G. English, of Scott, Samuel McCampbell and J. G. Reed, of Clarke.

At a subsequent meeting of the Board, the following persons were elected officers for the ensuing year: Wm. J. Holman, President; E. G. English, Vice President; D. T. Haynes Secretary, and Wm. F. Jones, Treasurer.—*New-Castle Banner.*

VIRGINIA AND TENNESSEE RAILROAD.—A communication from Mr. Garnett, chief engineer of the Virginia and Tennessee Railroad, appears in the Lynchburg Republican, from which we get the following interesting information as to the progress of this great railway enterprize. Mr. Garnett states that the whole cost of the road, 204 miles in length, will be $5,000,000, or say $25,000 per mile, when completed and equipped with a large supply of cars and locomotives. One hundred and six miles of it are now opened, being an addition of 33 miles since the 1st of January. The receipts for July amounted to $15,000, and he estimates those for August and September at $20,000 per month or more. By the first of October, or within a few days thereafter, the road was to be extended to Wytheville, 135 miles from Lynchburg.

RAILROAD TO PARIS.—We understand a locomotive passed over the Alton railroad from Terre Haute to Paris on Saturday night last, and it is said passenger cars will soon be running between these places.—*Wabash Courier, Oct. 14th.*

GAS.

AUBIN'S PATENT.—We are agents for this new and improved furnace, and having had one in operation at our office for several months past, can confidently recommend it as being simple in its operation, occupying little room and furnishing a pure and beautiful burning gas. From the peculiar arrangement of the retort it is not liable to *burn out*, thus saving a great part of the expensive repairs of other furnaces. We are prepared to erect these furnaces at our own risk and warrant them to produce good gas.

HORSE POWERS.—The undersigned being agents for the sale of R. H. Pease formerly Emery & Co.'s Horse Powers, are prepared to furnish them to order. They occupy little room and do their work effectually. T. WRIGHTSON & CO.

RAILROAD HOTEL.

CINCINNATI, O.

THE GIBSON HOUSE, Cincinnati, is situated on Walnut-street, between Fourth and Fifth, in the immediate neighborhood of all the Railroad Offices. For comfort and convenience it is believed that this hotel is unsurpassed. It is heated with steam from the first floor to the fifth, thus making it the most desirable winter house in the West. The proprietor hopes to enjoy a share of the patronage of Railroad men.

A. WETHERBEE, Proprietor.

THOS. M CASH,
PHILADELPHIA RAILWAY AGENCY.

For the purchase of all articles required by Railway Companies, On Commission.

Office, No. 80, South Fourth-street, near Walnut,
PHILADELPHIA.

CHARLES FRODSHAM'S
IMPROVED WATCHES!
BEGGS & SMITH,
JEWELERS,
No. 6 West Fourth St.,
Adjoining the First Presbyterian Church,
CINCINNATI, O.,

HAVE received from Mr. Simon Willard, Boston, Agent for the United States, the sole and exclusive agency for the sale of **CHARLES FRODSHAM'S** NEW SERIES OF IMPROVED CHRONOMETER WATCHES, in the states of Ohio, Indiana, Illinois, Michigan, Iowa, Wisconsin, Missouri, Kentucky and Tennessee.

In the Watches of the New Series, Mr. FRODSHAM has succeeded by a more perfect method of compensation, a more correct adjustment in isochrouism, and an entirely new and peculiar construction of the train, by which more power is obtained without increase of size, in producing timekeepers of wonderful and unrivalled accuracy. The great importance of the improved watches is a perfect regularity of time under every variety of climate, motion and position. So perfect are the adjustments, that the most violent exercise, such as horseback riding, jumping, etc., produces on them no sensible effect They are therefore, particularly adapted to Railroad purposes.

Liberty is given to refer to the following gentlemen, who, among many others, have proved the excellence of Charles Frodsham's Watches as timekeepers:

Gen. John S. Tyler.....Massachusetts.
John E. Thayer, Esq..... "
Enoch Train " ..... "
E. C. Bates, " ..... "
F. W. Thayer, " ..... "
Wm. Whiting, " ..... "
Geo. M. Thacher, " ..... "
David Dyer, " ..... "
Alvin Adams, " ..... "
Billings Briggs, " ..... "
David Weld, " ..... "
Hon. Ebenezer Lane, } ..... Sandusky.
E. F. Osborne, Esq. } ..... Ohio.

The Prices of the New Series Gold Cases, are According to Size, viz:

SIZE 12.....
" 14.....$230
" 16.....
" 18..... 250
" 20..... 275
" 22..... 300

Recommendations:

Boston, Sept. 3, 1853.

The Compensated Lever Watch I purchased of you, made by Charles Frodsham, London, No. 7300, has varied but thirty seconds from mean time in six months, by actual daily comparison with your regulator.

Yours, &c., ALVIN ADAMS.
Mr. Simon Willard.

Boston, Feb. 4, 1854.

Mr. S. Willard Dear Sir—The Frodsham watch, No. 7557, I purchased of you last October, has performed wonderfully well. I have compared it almost daily by your Astronomical clock, and its variations for ninety days is but one second, or a loss of but one-hundredth of a second per day. I consider it better than any Marine Chronometer I ever used.

Yours truly,
FISHER A. NEWELL,
Late master of Sch., Honolulu.

Sandusky, Ohio. Jan. 1, 1854.

Mr. S. Willard, Dear Sir—More than six months ago I purchased of you two of Frodsham's best watches—up to this time, one of them, No. 7571, has altered from mean time but twenty-seven seconds, and the other, No. 7517, but twenty-three seconds in the same period.

Yours, respectfully.
E. F. OSBORNE.
To Mr. Simon Willard.

Gentlemen—On the 1st of April last I procured from Mr Willard, of Boston, one of Frodsham's improved series of watches. It was regulated and set to Cincinnati time. It has not, in that period, been suffered to run down, nor have the hands been moved, and to day it is 20 seconds only slow. Respectfully yours,

HENRY O. AMES,
Sup,t Cin. Ham. & Dayton Railroad.
August 18, 1854.

To Messrs. Beggs & Smith.

The following is an extract from a letter of William Brown, Esq., Springfield, Ohio, engineer on the M. R. & L. E. R. R., who has personally kept the rate of several of Frodsham's watches.

"Finally from what I have known of Frodsham's watches, I am very strongly impressed with the idea, that they are a decided improvement on all other timekeepers, and were they set in gimbalis and used with the same care, I think their performance would equal that of Mr. Frodsham's celebrated box chronometer, and would answer the same purpose for determining longitudes."

Sept. 21-6*

DENNEY'S DIVIDED CAR AXLE.

PATENTED JANUARY 31ST, 1854.

THE ATTENTION OF RAILROAD COMPANIES is respectfully invited to an examination of the merits of this valuable invention, which offers to add largely to the safety of life and property.

The valuable features of this arrangement of axle are, a saving of full fifty per cent. in motive power on crooked roads: the rails are protected from being destroyed by the flanges of the wheels coming in contact with them on the curves, as is the case with the stiff or rigid axle, which not only destroys the rail but puts a constant strain upon the wheel and axle, causing the wheel on the inner rail to trip or revolve upon the rail under the weight of the car and its load, while the opposite wheel is traversing its greater distance; the tendency of which, is to wear the wheel flat, and cause it, or the axle, to break sooner or later. There is less danger of the car leaving the track from its having become spread.

Axles fitted in this way do not require to be near so large, and yet contain more strength than the common axle, for the reason that the liberty given to the wheels, which allows them to accommodate themselves to the curvatures of the road, removes wholly the strain thrown upon the ordinary axle; and therefore, it requires no more strength of iron at any point between the wheels, than is contained in the bearings, which in the ordinary axle, is not more than one-third of the strength of the other portions of the axle.

The elongated bearing which forms the connection is so proportioned as not to wedge or become tight in the alloy, the wear being almost imperceptible, requiring to be set up not oftener than once in twelve months, by a slight tightning of the screw nuts. If, from long service, the alloy becomes worn out, it can be refitted, making it as perfect as when first fitted up, and the gauge of the wheels will never become changed so as to injure the running of the car.

It is after a series of the most careful experiments, conducted through a period of time sufficient to test in the most satisfactory manner, the real merits of divided car axles, and a thorough and practical test in real service of over two years, that we now offer to Railroad Companies one that we are assured will give universal satisfaction in its operations, and both simple and cheap in its construction.

We are now ready to dispose of rights to use the above axle on the following terms: We guarantee full and perfect satisfaction by giving ample time to thoroughly test its merits, and will require no payment to be made until such satisfaction has been given. All applications to be made to

SAMUEL L. DENNEY,
Christiana, Pa.
Or, to **CHRISTIAN UMBLE,**

jy.10†

TYLER DAVIDSON & CO.,

Agents for the

BOSTON BELTING COMPANY

India Rubber Machine Belting in any quantity, from 2 to 20 inches.

India Rubber Steam Packing;

Mixed	do	do	1-32 to ¼ inch thick.
Plain	do	do	1-32 to 1 inch thick.
Pure	do	do	

Pipe and Manhole Rings, all sizes;

Square or Rope Packing, do.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agent of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.

2d, They are a great deal cheaper.

3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations. This is a new and important invention. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the COLDEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils, -10 casks, assorted weights now in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Leland's Superior C. S. Car and Auger Bitts.—All sizes.

Brass Kettles, and Sheet Brass, &c.—Brass Kettles, assorted from 6 to 30; Sheet Brass assorted from No. 0 to 30; Brass Wire, do do do.

Star Breast Chains.—Four casks of those superior double-linked Chains, just received.

Walker's Trace Chains.—70 casks of those superior goods, warranted full length and sizes, 8 to 20 links, straight and twisted, now in store.

American Anvils.—Eagle brand, faced with with cast steel, and warranted by the manufacturers equal to Armitage's Mousehole.

Plated Spoons.—Plain, tipped, and threaded heavy plate, on best quality of German Silver.

Premium Gimlet Screws.—10,000 gross just received.

Mill Saws. Hoe & Co's C. S. Wm. Rowland's, and W. H. Rowland's 6, 6½, 7, 7½, and 8 ft

Cross Cut Saws.—Hoe & Co.'s C. S., Johnockerell's C. S. and G. S., Wm. Rowland's and W. & H. Rowland's 5, 5½, 6, 6½, 7, 7½, and 8 feet Also, 4 and 4½ feet Tennon Saws.

Axes—1000 doz. Axes, assorted Yankee and Kentucky patterns, first, second, and third quality

Nails.—4000 kegs Shoenberger's and Wheeling Nails, now in store.

For sale by TYLER DAVIDSON & CO.,
mr 3 140 and 142 Main street

Sep. 7, tf. WM. H. SMITH, Conductor.

NOTICE TO CONTRACTORS
Mobile and Girard Railroad.

SEALED PROPOSALS will be received by the undersigned at this office, until the first day of December, for the Clearing, Graduation, Track-Laying, together with the building of all Bridges and Culverts of the Western Division of the Mobile and Girard Railroad, extending from Mobile to Greenvile, covering a distance of 130 miles.

The work will generally be divided into one mile sectlons, and bids may be made for one or more of these seclions. Separate proposals are desired for the Track-laying, building of Bridges and Culverts, likewise for the building of the Trestle-work, 5½ miles in length, across the Tensas and Mobile Rivers, with the intervening swamps. The trestle-work will be 12 feet high, built upon Black Cypress Piles, found in abundance and adjacent to the line; the two rivers will be crossed with the common Pile Bridging with Truss Pivot Draw in the center of each.

Specifications with the form of the contract and proposals can be had of the undersigned upon application.

Plans, profiles and estimates of that portion of the line are now ready for examination. Parties proposing will please designate it as such upon the envelope.

The country is healthy, with no swamps after leaving the Tensas River. From Mobile to the river, 18.5 miles the grading is light and country very healthy at all seasons of the year. After the line leaves the Tensas River, it passes through, and on the ridge that divides the Alabama and Conecuh waters, easy of access by the Alabama River, and through a section of country well stocked with provisions.

Payments will be made one-tbird (⅓) in current funds, one-third in the capital stock of the Company, boaring (.08) per cent. interest payable in stock, until the rnad is completed, then to cease and become common stock of the road, and relying upon the earnings of the same for dividends; the balance (⅓) one-third to be paid in the (.08) per cent. convertible bonds of the Company, maturing in (5) or more years, at the option of the contractors, coupons payable semi-annually either in Columbus, Ga., Mobile, Ala., or at New York, at the option of the holder.

To bidders personally unknown to the undersigned, bond and approved security will be required to an amount not exceeding (¼) the amonnt of the contract, for the timely and faithful completion of the same.

22½ miles of the road from Girard west, will be open for business the first of November, and 52 miles 9 months therefrom; it is the intention to have the entire line of 245 miles open for business early in 1858.

Sept. 28, 1854-9t. GEO. S. RUNEY.

Baltimore & Ohio Railroad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was opened to the Ohio River in the spring of 1853, and has already established a high character with the business community of the West. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of the country through which it runs, and its many admirable provisions for the expedition, comfort and safety of travelers, it has received such favor as a passenger road, (with its present connections,) as to show that it will become the preferred route for all portions of the West and South-West as soon as its further connections are formed by the completion of the Central Ohio, North-Western Virginia and other Railroads now rapidly finishing.

FOR PASSENGERS BY THIS ROUTE,

Through Tickets from all Parts of the West,

ARE NOW SOLD IN

Cincinnati, Louisville, Madison, Indianapolis, St. Louis, Chicago, Toledo, Detroit, Cleveland, Columbus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED

For Sending Travelers Direct to
WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION

The fullest accommodations are provided. In motive power and Cars, the company has abundant resources, which are being further extended to meet the demands of Western Trade. In the dispatch and regularity of transpart, and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road connects directly in the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,

The numerous Steamers of the Parker Vein Line to New York and Boston, the Ericsson Steamers by Canal to Philadelphia and New York,

And various other Lines of Steamers and Sailing Vessels to the Eastern Ports, and to Richmond, Norfolk, Charleston, Savannah, etc.

J. B. FORD is the Company's Receiving Agent at Wheeling.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose. nor "heated" by severe service. The Resevoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.

The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

Models and Testimony of the above Boxes, may he examined, and arrangements may be made for the right to use the same, with the subscriber.

CINCINNATI:
THURSDAY MORNING,.....NOV. 2, 1854.

E. D. MANSFIELD,

May be found at the office of the Railroad *Record*, 106 West Fourth-street, between Vine and Race, (north side) between the hours of 11 A. M. and 1 P. M.

REMOVAL.

The Office of the RAILROAD RECORD has been removed to No. **106** West Fourth St., north side, between Vine and Race streets, in the building occupied by the Cincinnati & Cleveland Short Line, the Cincinnati, Lebanon and Xenia, and the Cincinnati & Dayton Short Line Railroad Companies.

The location is in the very center of Railroad business, and but few steps from the Burnet House. Full files of railroad reports, maps, newspapers and other documents can always be found at this office, and it will afford us great pleasure to give any information, and answer any queries on railroad matters, when in our power. We cordially invite railroad men from the country, when visiting our city, to honor us with a call, and avail themselves of the facilities of our office.

☞ **Orders for all kinds of Railroad Printing received and promptly attended to at the Office, No. 106 West Fourth Street.**

Railroad Printing.

WE have now attached to this office an extensive Composition and Press Room and Bindery, under the personal supervision of the proprietors of the RECORD. With confidence, therefore, we call the attention of RAILROAD OFFICERS and others to our extensive establishment, containing every facility for turning out superior work in any and every department of the PRINTING BUSINESS.

We are fully prepared to furnish Railroad and other Reports, with or without Maps or other Illustrations, gotten up at short notice and in superior style. Also, Blanks of any description, adapted to the wants of the various departments of the Railroad service, and to the wishes and tastes of the parties.

Also, Railroad Tickets and Conductors' Checks. Our patent Card Press, enables us to supply any demand at Short Notice and in Unequalled Style.

Also, Blank Books, ruled to any pattern, with or without Printed Headings, and bound in the most substantial manner.

With the numerous facilities for doing the Best Work, we feel no hesitancy in promising full satisfaction to all who may favor us with their orders.

T. WRIGHTSON & CO.,
Rail Road Record Office, 167 Walnut st Cin.

INFLUENCE OF RAILWAYS ON MONEY AND CURRENCY.

In the discussion relative to the construction of Railways, one point of great interest has been left out. This is the influence of railways on the *amount and kind of currency* required for general use. This is a very important point, and has much to do with the condition of the currency. This we shall endeavor to illustrate by some leading facts. To anticipate a little an objection which may be raised to our subsequent statements, that railways have only changed the *mode* of travelling it is sufficient to say, that not only the mode, but the amount is changed immensely When the entire travel between the East and the West was confined to the two stage routes, via. Pittsburgh and Wheeling, the number of passengers capable of being carried, by all the stage coaches in use, were not one-tenth the present number, carried by the great railway lines. The difference in wagon traffic is still greater. It is multiplied an hundred fold. The commercial exchanges are multiplied in a way they could not have been. In one word, it is perfectly established, that railways have *created* a new business, and enlarged, that which existed. The influence of this increase of commercial exchanges, on the exchauges of money, and the currency is very great. Let us look a little into the receipts and disbursements of money, on the lines connecting the Atlantic cities with the West. The receipts of money by these lines, are in 1854, about as follows;—

New York and Erie	$5,500,000
New York Central	5,000,000
Pennsylvania Railroad	3.500,000
Baltimore and Ohio	3,000,000
Aggregate	$17,000,000

Here are four lines of railways, comprising 1800 miles of road, receiving the enormous sum of *seventeen millions of dollars per annum!* Now, there are two inevitable consequences following from this fact. The first relates to the *amount* of money required for this operation. The second to the *kind*.

1. Of the *amount*. How much money is paid these railroads in a single day, and how much must be retained, by those engaged in this traffic, or, by the companies to complete this operation? Allowing for a small amount of business on Sundays, these companies receive $50,000 per day. To ascertain how much of this is retained on hand, we must consider the nature of railway disbursements. These are of three kinds;—first, to their employees,—of whom, some are paid, by the day, and others by salary; secondly, to the repairs, and machinery of the working department,—much of which is paid, at intervals of time; and thirdly, to Bond holders and Stock holders, at intervals of six months. To day laborers, there is of course no delay; but to salaried agents, there is at least, a delay of a month;—and to semi-annual payments, there must be allowed several months, for the purpose of accumulating funds. We shall be within bounds therefore, when we allow thirty days for the retention of railway receipts, before they are paid out. The four great railways above mentioned will, therefore, require a constant amount of *one million four hundred & sixty thousand dollars*, on hand, to carry on their daily business. An examination of the accounts of the three railways, exhibited in their annual reports, will show, that this has actually been the case. To extend this principle to the entire United States, there is a sum of, at least, *ten or twelve millions of dollars*, in some way actually employed, by railway companies, in carrying on their operations. But while the companies are thus employing this sum, travellers and trafficers are also holding up money to pay to the companies. This is, of course, much less, because, they have not to *prepare*, like the companies for distinct payments. Nevertheless, it is not too much to say, that on a given day, there are three or four millions of dollars, retained by travellers, and merchants, to pay the traffic on railways. We may, therefore, fix the *amount* which railway business requires, in the United States, (as a daily business) at something like fifteen millions of dollars. But, some one may say, is not this deposited in the Banks, and does it not go into commercial circulation? But little of it, for obvious reasons. In the first place, we have not included any part of the contraction, or surplus funds of the companies. It is the daily operation we have looked into. Next, to time, we have allowed, as an *average* for the retention of funds is *thirty days*, and it is plain. Banks cannot use much of deposits, which must be paidout on a very short period. Then, a large amount of money is in hands of railway agents; and finally, none of that held by travelers, is in Banks. It is fair to conclude that a sum not much less than that of fifteen millions is constantly retained for railway business. It is equally certain, that ten millions of this is additional to what would have been required under the old system of carriage. We then see, that railways have exercised a very great influence, on what may be called the consumption of currency, or rather has greatly increased the demand for it.

2. As to the *kind* of currency. This is the most important inquiry. It is perfectly obvious, that if the railways hold, on a minimum, ten millions of currency, that they exercise great influence on the kind of currency *in use*. In this respect, they are like the Banks, only their control has a much wider local extent, and is less within the range of mercantile usage.

In regard to the *kind* of currency which railways receive, the companies have obviously, two very plain points of interest: 1. To *receive* what the people have to pay; and 2nd,

To *reject* what is in the least doubtful. In receiving and discriminating between the different kinds of common currency, it is obvious, the railway companies have great power, and may exercise it for great good, or, evil. In common with the whole community, they have an interest in maintaining a sound currency; but certainly no interest in diminishing its supply. Two practical examples of railway influence on the currency have occurred, in this state, recently. At the Railway Convention, held at Columbus, it was resolved to *obey* the law forbidding the circulation of of foreign small notes. It was said among other things, that their charters might be forfeited if they did not. But there are higher grounds than that for such a course. Without at all admitting the wisdom of that law, we say unhesitatingly, that it is the general interest, and duty of railway companies to discourage a weak or doubtful circulation. Small notes, put forth by distant States, and corporations are of this character; and the difficulty of making *change*, in a country which has already so large an amount of coin on hand, is only a reason, for encouraging the introduction of coin, on the great highways, where it is necessary.

A second example occurs in the rejection of the Indiana Stock notes. This was undoubtedly a great inconvenience to many individuals; but was it not necessary, when it is seen, that Bankers, and merchants have been unable to sustain their circulation?

We point to these examples, only as an illustration of the general fact, that Railway companies can exercise great influence over the currency, and that they should exercise it for the general good. Had the railway companies chosen to receive the notes of any good Banks, we doubt whether its circulation could be checked, however little worthy of credit.

The control of railways over the currency, points to another idea, to which we may again allude,—their control over exchanges.

MINERALS OF WESTERN KENTUCKY.

The Eastern portion of Kentucky has been known to be rich in mineral productions, and portions of it have become important for the use that has been and is to be made of them, as the following extract from the Report of the Lexington and Big Sandy road, will show:

No contract for iron has yet been made, as it is contemplated that a large and extensive rolling mill will be erected on the line of the road in time to furnish the iron for the greater part of the road—that which will be wanted between Lexington and Mount Sterling, most probably will be required at an earlier period; it is the design of the Board to contract at an early day for the iron to lay the track between the two last designed points, indeed this would have been done a month ago, but for the belief then entertained, that railroad iron would fall in price, and which anticipation has already been realized to the extent of several dollars in the ton.

It has not generally been known, however, that the Western portion possessed much, if any, valuable mineral land. This region has lately been traversed by Dr. Owen, the State geologist, and is found to contain much that is valuable and important, hidden among its rocks.

The Doctor says that throughout the whole southwestern coal field of Kentucky, from the sources of the Tradewater in Hopkins county to Green river in Muhlenburg county, the whole region is full of geological interest. There is hardly a section of a stream or ravine but what discloses materials that must at some period be a source of wealth to the owners of the soil.

In the section laid bare from the lowest ground in Richland creek to the summit of Wright's Ridge in Hopkins county, which may be comprised in a vertical cut 300 to 350 feet high with its base about 200 feet above high-water in the Ohio, there are six workable beds of coal. The average thickness of these beds is nearly five feet, and their united thickness about 30 feet. Three of these beds lie within a vertical space of 30 feet toward the base of the section, as shown on the Hunting branch of Clear creek near the dividing ridge between the Tradewater and Pond river.

Around the uplift of the strata prevalent in the vicinity of Wright's Ridge, the whole of these six beds are accessible above the drainage of the country. It is also probable that the detailed survey may discover intermediate beds of coal now hidden by debris. These beds feather out toward the South, the lowest one having its southern limit in the northern portion of Christian county and the southern confines of Muhlenburg county.

These coal measures, dipping toward the North and Northwest, toward the great Illinois coal field, underlie the whole of Hendersou and McLean counties, modified probably in thickness, relative proximity and quality.

In reference to the quality of the foregoing coals, the chemical analysis of six varieties, obtained where there was the best opportunity of receiving fair samples, will show their value.

1. Specific gravity, 1.278.

Water and volatile gases	42.2
Fixed carbon in coke	54.8
Ashes (light gray)	3.0—100.0

2. Specific gravity, 1.218.

Water and volatile gases	41.48
Fixed carbon in coke	54.72
Ashes (white)	3.80—100.00

3. Specific gravity, 1.339.

Water and volatile gases	40.75
Fixed carbon	50.25
Ashes (white)	9.00—100.00

This coal underlies the black-band.

4. Specific gravity, 1.305.

Water and volatile gases	45.20
Fixed carbon	50.70
Ashes (gray)	4.10—100.00

5. Specific gravity, 1.294.

Water and volatile gases	43.75
Fixed carbon	50 75
Ashes (nearly white)	5.50—100.00

6. Specific gravity, 1.270.

Water and volatile gases	42.47
Fixed carbon	56.13
Ashes (pale flesh-colored)	1·40—100.00

Liverpool coal analyzed by Johnson.

Specific gravity, 1.260.

Water and volatile gases	40.48
Fixed carbon	54.90
Ashes	4.62—100.00

The comparison between some of these specimens and the Liverpool, is not unfavorable to the coal of Kentucky. The unusually small quantity of ashes found in No. 6 of Kentucky coal, renders it peculiarly suitable for manufacturing purposes.

The black-band iron ore mentioned as overlying No. 3. is found in the southern part of Muhlenburg county, in some places of a thickness of nineteen inches to two feet, occurring sometimes in compact, tabular ponderous layers, almost as black as coal; sometimes of a shaly structure or in immense segregated masses, composed of alternate layers of black and reddish-gray. In Hopkins county it varies from three inches to one foot, and usually presents the form of solid, heavy, dark-colored slabs, like flag-stones. This appears to be accompanied by one if not two beds of limestone not immediately overlying it, but in such a position that there is good reason to believe that one of these beds will be found within convenient distance.

The other varieties of ore which occur in these counties are of much greater thickness. The argillaceous shales which almost immediately overlie the black-band are often rich in argillaceous iron ore, and the ordinary varieties of carbonate of the protoxide of iron; similar ore occurs also in a higher geological position. The clay ironstone occurs mostly as kidney-shaped segregations disseminated through the shales, which scale up and exhibit the concentric laminæ of which they are formed.

On Batist creek an ore bank of this kind occurs from two and a half to three feet thick, which supplies much of the ore used at the Buckner Iron Works. In the same county the light-colored shales overlying the black-band are from four to five feet thick, one half of which may be considered good iron ore; also on a high ridge one and a half miles southeast of this furnace on the waters of Lick creek, a soft calcareous and fossilifferous ironstone occurs, which is ten feet thick or more, this ore has also been partially worked for the use of the same furnace. The ferruginous shales over coal No. 5, are often fifteen to twenty feet thick or more, but the quality and quantity of the disseminated iron ore is variable, and generally in greater force in Muhlenburg than in Hopkins county. There are often observed considerable bodies of hydrated brown oxide of iron associated with the sandstones overlying the higher beds of coal; this ore, however, is prone to be too silicious to be profitably worked; though in the absence of better ores, this species of iron ore might be worthy the attention of the iron-masters.

This vast amount of mineral wealth distributed through this portion of Kentucky, may be said to be almost dormant; even the coal banks which have been in some instances partially opened, afford as yet but a very paltry revenue to the owners.

What this country requires, to realize the intrinsic value of its great natural, mineral, as well as agricultural resources, is an outlet, with enterprise, skill and capital, to work the mines in an economical and systematic plan. A direct line of railroad communication to the markets for its iron and coal, is undoubtedly the first and principal step toward the accomplishment of the ulterior improvements, since wherever the raw material exists in abundance and of easy access, with the necessary facilities for carrying the manufactured produce to market, the certainty of success in a very profitable business, immediately attracts the attention of men of business and capital and those skilled in the arts.

THE CROPS OF 1854.

The inaccuracy of personal observation in most persons, and the exaggeration of the newspaper press lead to continual misapprehension on the state of the crops. Then we have had in the present season most extraordinary misstatements, on both sides of the case. We shall here briefly notice them, by way of arriving at correct conclusions.

1. It has been persisted in by nearly all the newspapers of the country, that the *wheat* crop of 1854 was a full average one. Now this was *not* the case. To make a full crop, there must be *weight*, as well as number. This was one source of the errors. It was only necessary to observe the *thrashing out* of some of the best appearing fields to know in what the crop failed. The fact is, when the wheat was thrashed out, it very generally fell short of the quantity estimated; so that there is in the aggregate a deficiency. In ordinary years, however, there is a large stock, on hands; but, now the old stock is exhausted, by last year's exportation.

2. The corn crop is largely short There again there have been great exaggerations. In some parts of the country, it has been said, there is a total failure. In others, no failure at all. Neither of these accounts can be taken, as a true picture of the corn crop. The truth is, there is a falling off of at least 30 per cent, in the aggregate corn crop; and this is equivalent to a loss of *eighty millions of bushels* in the valley of the Ohio. As this must be taken out of the *surplus* it is quite obvious, that the *fatted* animals of 1854-5 must fall short, largely, of the general amount.

3. The potato crop is generally a very great one in this country. But this year, probably it is not over one third the usual quantity; and this makes a far greater difference in the quantity of food, than is generally supposed. The crop of potatoes in Ohio should be this year 6,000,000 bushels. But there is not one fourth this amount. There is therefore, a loss of 4,500,000 bushels, 270,000 000 lbs; equivalent to a supply of vegetable food for eight hundred thousand people. Such losses in vegetable products, tells heavily on the aggregate supply of a people; and will tell more heavily on its reports.

The other crops of 1854 have been very good. But the loss in those are so great, that the price of most of the food for 1854-5 must be very high. Nor will the scarcity of money make any material difference.

The proof of this may be found in the present state of the Cincinnati markets, where in spite of great complaints for money, prices of all agricultural products are very high. Flour is $8,00 per barrel; corn 65 cents per bushel; butter (fresh) 30 cents per pound. If these are the prices of October, how can they be less during the winter?

THE Report of the Mississippi Central and Tennessee Railroad is received, but not in time for notice this week; so that of the Nashville and North Western Railroad Company.

We have received some beautiful lithographs of locomotives, from Danforth, Cooke & Co, Patterson, N. J, and from the Boston Locomotive Works.

CAIRO AND FULTON RAILROAD.

In our issue of Oct. 12, there was copied into the Record an article from the Memphis Eagle and Enquirer of a similar caption, severely commenting on Roswell Beebe, Esq., President of this road; and a few general remarks were made on the influences of such things. Being satisfied of the injustice of the position assumed in the article of the Eagle and Enquirer, we deem it right to explain how it got in our paper. Mr. Mansfield and Mr. James having other duties, are not expected to watch local items and clippings, and the illness of the other associate Editor prevented him from doing it, or we think we should not have been led by an acrimonious article in a distant journal to lend our countenance toward impeaching a gentleman of Mr. Beebe's reputation. The Arkansas True Democrat thus replies to the Eagle and Enquirer:

Though our paper is one of the *journals* alluded to, the startling developments of the Eagle and Enquirer are news to us. The "*discussion going on*" has brought out no such facts, and warrants no such conclusions, as those affirmed by that paper. In all the acts of Mr. Beebe, as President, he has been, so far as our information extends, fully sustained and endorsed by the voice of the people; and in a particular act alluded to, the subscription of the internal improvement fund to the Cairo and Fulton Railroad Company, he has the unqualified approval of the Gazette, the paper now denouncing him, made at the time the fund was so subscribed. Such are the facts elicited in the "discussion." If the editor of the Eagle and Enquirer has found others, he has drawn them from the store-house of his own perverted imagination. No fact has been disclosed which casts the slightest stigma upon Mr. Beebe in the application of the funds entrusted to his care.

We have access to the books and papers of the Cairo and Fulton Company. We have admired the perspicuity and simplicity with which they have been kept, and above all, the correctness with which every thing has been recorded. There is a full and accurate account and duplicate receipt, as given, filed, of every cent received into the treasury; and also a voucher, explaining the manner and object of every cent paid out.

Nor has the president ever acted in any matter of importance, particularly in the disbursement of the funds of the company, without the *advice and consent* of the executive committee appointed by the company and associated with him.

These facts the books and records of the company will show, and they are now, and always have been, open to the inspection of any and every stockholder. There is no secrecy about them—nothing to be concealed in the operations of the president and directory.

The destruction of the bright prospects of the Cairo and Fulton railroad is the leading object of the assailants of the company and its president.

We have no doubt that all Mr. B.'s official acts admit of ample justification; it is stated that even the local papers opposed to Mr. B. have not assailed his motives. From an extra of the "True Democrat," we find that at a meeting of the Board of Directors, held to act on the report of the chief engineer, a committee was appointed to examine the books and accounts of the president and treasurer, and the action of the executive committee. The following is a part of their report:

"This embraces the internal improvement fund of Pulaski county, as well as that of all the other counties that have taken stock in the road. These subscriptions, as appears from the records of the company, have been made by order of the respective county courts, which are uniform, while the several amounts paid upon these county subscriptions have been turned over to the treasurer of the company in the same manner as those arising from individual subscriptions, thus constituting a general fund, disbursed by order of the company, and not by authority of the president, treasurer, or other member of the company.—Signed H. C. Dye, H. K. Hardy, James Russel. Oct. 9, 1854."

We hope to see this road maintain its bright prospects, and carried through to early completion.

Errata in Prof. Mather's Article on Manufacture of Iron.

We publish the following list of errata in Prof. Mather's article, as it is a subject which, on account of its importance, needs the strictest accuracy. The article was very closely written, and as it was impracticable to send the proof away very far, it is not surprising that there are some errors; although we could have wished that there should not be any:

LAKE SHORE RAILWAY.

The following communication, addressed to the City Council of Milwaukie, in reference to the Lake Shore railway, is from the *Daily Wisconsin*, Milwaukie. It will be seen that strenuous efforts are being made to complete the road to the state line:

Office G. B. Mil. & Chicago R. R. Co.
Milwaukie, Oct. 4, 1854.

To the Honorable Common Council of the City of Milwaukie:

The Green Bay, Milwaukie, and Chicago Railroad Company apply to your Honorable body for the issue to them of the remaining $50,000 City Bonds of the entire loan of $200,000, and also the return to said Company of its first mortgage Bonds pledged as collateral for the issue of the first issue of City Bonds.

The Company proposes to substitute other securities, and would ask the appointment of a committee to whom they can present the matter in detail, and who can report thereon to you.

The Company have now purchased and paid for 3600 tons of iron rails, sufficient for the completion of their road to the State Line—all the spikes and chairs, nearly all the ties, with the grading so far advanced as not to require more than three months to complete it. Have purchased and paid for a large portion of their equipment, and have negociations nearly completed for the balance, and require all the means that they can command to pay duties and freights on their iron rails, now on their way from New York, to pay for grading and track, and all the other expenses incident to the construction of the road. With the facilities asked of your Honorable body, and which can be granted without prejudice to the city, this important avenue can be completed by the 1st of January, 1855.

By order of the Board of Directors,
THOS. P. WILLIAMS, President.

GREAT WESTERN R. R., CANADA.

Railways in the United States have in some, we may say, many instances, exceeded the estimated cost. This is pointed at significantly as a proof of incompetency on the part of our engineers, and of weakness on the part of our directors. This we believe an unjust charge. Our civil engineers, taken as a body, are as competent and enterprising men as will be found anywhere. The difficulty generally is that the estimates are made only to the first running of the road, whereas after the first train of cars has passed there is much to do; and it is this which makes the cost exceed the estimate. That we are not the only ones who cannot *guess* exactly, the recent petition of the Great Western railway, Canada, to the Legislative Assembly of the province, will show:

(COPY.)

To the Honorable the Legislative Assembly of the Province of Canada, in Parliament assembled.

THE HUMBLE PETITION OF THE PRESIDENT AND DIRECTORS OF THE GREAT WESTERN RAILWAY COMPANY RESPECTFULLY SHOWETH:—

That the Great Western Railway, (independently of its branches,) is now open for traffic for the distance of two hundred and twenty-nine miles; but the Company have as yet only laid down a single track; and the road in other respects is not completed in so efficient and satisfactory a manner as is desired.

That believing it would prove a great public convenience, as well as increase the traffic on their road, to connect the same with the town of Brantford by a Branch Railway, they have caused the usual notice to be given of their intention to apply for an Act of Parliament to enable them to effect such connection.

Your Petitioners beg further to state, that the cost of the main line of road has already exceeded the amount originally contemplated; and the Company have become considerably in arrear in bringing it to its present state of advancement; and to enable them to liquidate such arrears, and to be in a position to effect such connection, they are desirous of obtaining an increase to their Capital Stock of One Million of Pounds Currency.

Your Petitioners would further respectfully state, that with the like view of augmenting the traffic on their road, and affording additional public accommodation, the Company have contracted for the building of two steam vessels to ply on Lake Ontario, and one on the Detroit River, to run in connection with their railway, upon which contracts they have made large payments.

That the Company entered into these contracts in good faith, and under the belief that they had sufficient warrant in law for so doing. That doubts have nevertheless been since expressed, whether they are legally entitled to build or own such property:—And conceiving that full authority on the part of the Company to own and control boats running in connection with their railway, would enable them to extend additional accommodation to the public, and also increase the business of their road, (and more especially as this is a privilege already conceded to other railway companies,) your Petitioners humbly pray that all doubts on the subject may be removed, and the privilege fully conceded to the Company.

Your Petitioners further respectfully state, that since the opening of the road, accidents have occasionally occurred, happening for the most part from cattle and animals getting upon the track; in some instances through the unavoidable insecurity of level crossings; and in others, it is believed, through the culpable carelessness or indifference of parties not fully aware of the great danger arising therefrom, both to the lives of travellers and to the property of the Company; and in order to enable the Company more effectually to provide against such casualties, and to remedy some minor inconveniences, and facilitate the harmonious working of the road, the Company are desirous of obtaining certain amendments to their Charter

Your Petitioners therefore humbly pray that your Honorable House will be pleased to concur in a Bill to effect the several objects above referred to; and, as in duty bound, your Petitioners will ever pray.

ROBERT W. HARRIS,
President Great Western Railway Company.
Hamilton, 9th Oct., 1854.

Iron Foundries in Texas.

We are glad to see the attention of our people nearly all around us awaking to the importance of manufacturing for themselves and of keeping at home for the benefit of all classes the money which must necessarily be expended. From a pertinent article on the above head, in the "*Meridian,*" Marshall, Texas, we make the following extracts:

Texas, during the last three sessions of her Legislature, has granted charters, we should say, for at least five thousand miles of railroad, and has allowed ten years as the limit for construction, in order to secure the land bonus.

One mile of railroad requires 225,280 pounds, or say one hundred tons of iron. The cost of this at the nearest station will be, we should think, not less than $75 a ton. At this rate, the iron for twenty-five hundred miles of road will involve an expenditure of nearly nineteen ($19,000,000) millions of dollars, and nearly two millions a year for a period of ten years.

What, then, is the policy of Texas? Where shall this iron come from? To what part of the globe shall this, twenty or thirty, or forty millions of dollars be sent? Shall we stretch our railroads to Tennessee, Missouri, Pennsylvania, or stretch out gold and silver rails to span the ocean, and seek a supply in Europe? In other words, shall the railroads of Texas stretch from four hundred to four thousand miles to reach the foundry, or shall the Iron Foundry come to Texas, and take up its abode hard beside the railroad track.

We are told, and do not doubt the fact, that Texas has the raw material, the ore, the wood, and the coal, in abundance? What, then, is her policy? Why, surely, to use all legitimate means to establish and encourage iron foundries in the state; feed the operatives, and save as much of the money, both at present and in the future, at home, as possible. The state is compelled to go in debt for the iron, and tax her resources to pay. This payment must be in money, and so far away from home, that it can never hope to return. We have post oak and cedar a plenty for cross ties. Is it wise to let these stand idle, or encumber the ground, while we tax the resources of the state, and send its earnings abroad to pay for them. Yet these cross-ties, at the rate now offering, will not cost one-seventh as much per mile as the iron. Why? Clearly because the cross-ties are growing along beside the railroad track. The ties for ten miles are needed, and, *presto*, a thousand men, and two hundred teams are in the woods, and to-morrow the timbers are on the track. But when it comes to the iron, Texas will have to wait for every one to fill his own order first, then wait for the wind, wait for the tide, wait for rains, and wait for the rivers; pay double in money and a hundred fold in delay, and then wont get half as much as she needs in time.

When the Legislature was offering sixteen and twenty sections to the mile for building roads, and three hundred and twenty acres for every steamboat or sea-going vessel of fifty tons, and as much more for each additional twenty-five tons, built in the next five years within the state of Texas. When they were on the point of loaning some two millions of money to the railroad companies, it seems a pity that this subject, so intimately connected with the other, should have been overlooked. Nothing was done, nothing seems to have been thought of; not so much as a geological survey.

It is true there was introduced by Mr. Marverick, of San Antonio, early in the season, a bill providing for a geological survey of the state; but of its facts we know nothing, except that it never became a law. This is to be regretted, since it will delay action for several years, when authentic information on the subject of our mineral resources is wanted now, and cannot be had too soon.

PROCESS OF WHITENING PINS AND NEEDLES MADE OF IRON AND STEEL.

It is well known that pins made of brass wire are deficient of strength and elasticity, and accordingly they have been replaced by pins made of iron or steel; but it is necessary to tin them over. This operation, however, can not be performed equally well with iron as with brass; the pins have a rough, uneven surface, which renders them inconvenient to use, as they are liable to tear the cloth.

Messrs. Vautillard and Leblond, wishing to avoid this defect, formed the idea of first covering the iron with a thin coating of copper or other metal having a greater affinity for tin than iron has; but in order that this result should be satisfactorily attained, it is necessary to polish and pickle the pins before coppering them.

The above-named manufacturers have most ingeniously effected the polishing, the pickling, and the coppering, by one single operation. To treat for example, 2 kilogrammes (a little more than 4 lbs. 6 1-2 oz.) 4 litres (about 7 pints) of water, 300 grammes (10 ounces 9 drachms, avoirdupois, by weight) of oil of vitriol, 30 grammes (15 ounces, 13 grains, avoirdupois) of salt of tin, 40 grammes (1 ounce 4 drachms 17 grains) of crystalized sulphate of zinc (white copperas) and seven grammes (about 108 grains avoirdupois) of sulphate of copper, are mixed together; this mixture is allowed to dissolve during twenty-four hours. The bath being thus prepared, it is to be introduced into a barrel of wood, made pitcher-like, and mounted upon an axis. Into this barrel, which has a capacity of about thirty-five pints, the pins are now to be put; it is then turned rapidly during half an hour, when the pins will be found to have received a pickling, a polishing, and a slight coppering. After the lapse of this time, 20 grammes (about 10 drachms 8 grains, avoirdupois) of sulphate of copper, in crystals, (blue stone) are to be added, and the barrel again turned during 10 minutes, when a solid coppering will be effected, with a finely-polished surface. This done the liquid in the barrel is to be decanted off, and may be used repeatedly for the same purpose; the pins are washed in cold water, then put in a tray containing a hot solution of soap, and agitated for about two minutes. The soap-lye is decanted off, and the pins put into a bag with some fine sawdust and shaken, by which means the coppered surface assumes a brilliant appearance. The pins thus prepared may be tinned in the ordinary way. The articles made in this way are far more beautiful and useful than those made in the ordinary way.

This process is the more deserving of attention at present, quite independent of the superior quality of the pins, in consequence of the exceedingly high price of brass wire.—*Bulletin de la Societie D'Encouragement.*

NORTHERN CENTRAL RAILROAD.

The Stockholders of the Baltimore and Susquehanna Railroad Company on the 19th, by a unanimous and hearty acceptance of the Report of the Committee of Arbitration, virtually consummated the consolidation of the several roads leading from Baltimore to Sunbury, Pa., in accordance with the terms prescribed by the legislation of the states of Maryland and Pennsylvania, and of the city of Baltimore. All that now remains to be done to give vitality and energy to this important movement is the carrying out of the legal formalities necessary to the surrender of the property and privileges of the several Companies, and their transfer to the new consolidated organization.

Real and Personal Property in Chicago in 1854.

Each succeeding year shows a steady increase in the valuation of the real and personal property in Chicago. The figures on the Assessors' books are one means by which we may guage our prosperity, when one year is compared with another, but it must be remembered that these valuations are much below what the property would bring in the market We present from the Assessor's books the following:

General Summary of Taxes for 1854.

City Divisions.	Valuation of Real Estate.	Valuation of Personal Estate.	General Taxes.
South	8,657,840		56,275.96
"		4,467,546	29,039.04
West	7,442,799		66,985.20
"		647,906	5,831.15
North	2,890,105		26,010.94
"		286,043	2,574.39
	18,990,744	5,401,496	186,716.39

The value of the real estate as assessed in 1853, was $18,479,007; for the present year it is $18,990,744, showing an increase of $511,737. The valuation of the personal property in 1853, was $4,450,630; for 1854 it is $5,401,495, showing an increase of $950,865. The total valuation of real and personal property for 1853 was $22,929,637; giving an increase of $1,462,602.

Had not the business of the city been nearly suspended for several weeks by the fright produced by cholera, the valuation, especially of personal property would doubtless have been very materially increased.—The amount of personal property in the city has advanced more than the real, by $449,128. The enlargement is owing to the increased number of stores and the extending of the business of the city in all the departments of trade. The most striking contrast is shown by comparing the statistics of 1844 with those of the present year. At that time the amount of personal and real property was $3,166,945; this year it is $24,392,239; giving us an increase in the short space of only ten years of $22,225,29.

A few days since we commented upon, and quoted portions of an article from Hunt's Merchant's Magazine upon "Our American Lake Cities." In that article, the population of Chicago was shown from facts and figures, that could not be questioned, to have doubled once in three and a half years, and about the same ratio is shown to be maintained in the increase of the property of the city. We did not then, and we shall not now pretend to estimate how long that ratio of increase can be continned; but the fact that our railroads are now penetrating the Mississippi valley in all directions, that we are at the head of the finest chain of lakes in the world, and hold the key to their commerce, that our manufacturing facilities are unrivalled—all these indicate an increased ratio rather than lessening in our onward progress. We add simply that the same ratio, viz: a duplication in three and a half years would give us over a million of people in 1869, only fifteen years hence. Even half that number would place Chicago far in advance of any interior city, a position which her most jealous rivals will soon be forced to accord to the "Garden City."—*Daily Democratic Press.*

To Clean Brass.—If brass is corroded with oxyd—green or black—it can be removed by rubbing it with some diluted acid, such as sulphuric. This is rubbed on the brass with a cloth or sponge, and the brass then washed in hot water. After this the brass must be well rubbed with rottenstone and sweet oil, and finished with whiting or tripoli. Some persons use oxalic acid dissolved in water, instead of sulphuric acid, for the above-named purpose, and it is indeed more convenient, but it is very poisonous, and is therefore dangerous to keep in houses where there are children.

☞Earnings of the Cleveland and Toledo Railroad for the

Third week of Oct.	1854 -	$20,277

Spartanburg and Union Railroad.

We extract the following circular from the Unionville Journal:

Office S. & U. R. R. C.
Jonesville, Oct. 10, 1854.

Under the action of the convention of stockholders in this company, convened at Unionville, on the 9th of August last, I deemed it my duty to appoint, and do hereby nominate and appoint, the following gentlemen to attend the approaching session of the Legislature of North Carolina, "to secure, if possible, a charter to extend the Spartanburg and Union Railroad, as so to connect with the North Carolina Railroads," viz: Hon. Gabriel Cannon, Major H. J. Dean, Shimpson Bobo, Esq, Colonel G W. H. Legg, Doctor J. Winsmith, Col S. N. Evans, Colonel J. H. Carson, Thomas B. Jeter, Esq, Major J. S. Sims, Rev. James T. Jeter, Colonel R. J. Gage, Doctor Joseph H. Dogan, A. W. Thomson, Esq., Colonel F. Scaife, Colonel David Johnson, Major William S. Lyles, Major Thomas M Lyles, Major J. Y. Mills, Rev. James Saye, Major John Stroble, Doctor James McK. Gage, Major Rboert Boyce, Captain Thomas Bowker, Dr. Wm. K Sims, Colonel James Scaife, General B B. Foster, Joseph W. Tucker, esq, James Y. Trimmer. esq., General B. F. Bates, Major Govan Mills, Major J. B. Davis.

Considering the very great importance of the enterprise which our convention had in view, and upon which this action is predicated, a punctual attendance is respectfully and earnestly solicited.

D. WALLACE.

Railroad Convention at the American.

At the meeting of the numerous Roads in our city, which adjourned last evening, numerous important measures were adopted. Chief of these so far as the public is concerned, was the adoption of a Memorial to the Legislature, praying for the abolition of all laws to license runners for Emigrant Passengers to the West, and asking for a statute making it a penal offense to sell tickets for passage by railroad lines at rates higher than those charged by the roads. This will, measurably, end the scandalous cheating and robbery of the poor Germans, and Swedes, and Norwegians, who come so eagerly to our shores.

The charge for emigrant passengers from New York to Chicago, is to be $15.00.
From N. York to Cincinnati 10,00.
Luggage to the extent of 50 lbs. free. Over 50 lbs. $2,25 to Cincinnati, $2,50 to Chicago. The New York Central, and New York and Erie, are to have *ten per cent,* on the whole amount collected at New York from Emigrants, as compensation for the trouble and cost of taking care of them and starting them.

There will be an increase of freight from New York to Chicago, amounting to 7 per cent advance upon the present rates.

After the first of December there will be a slight advance of fare from New York to Buffalo, amounting on the Central, we believe to 50 cents.

The through trains will soon be changed starting from Buffalo at 6 A. M, 5 P. M., 11 A. M.—and leaving New York at 7 A. M. and 5 P. M., and getting to Buffalo respectively at 10.30 P. M. and 10.30 A. M.—*Democracy,* Buffalo.

Limestone Furnace.—The Jackson *Standard* says: "We observe that another "New Furnace Company" has been organized in Bloomfield Township in this county, under the firm of "Evans, Walterhouse & Co.," and known by the name of 'Limestone Furnace.' It is said that this company is stronghanded, and will spare no means to accomplish their undertaking at as early a day as possible."

The enterprising farmers of Sullivan are to have a county Fair on the 9th of November, ta Blountville.—*Knoxville Reg. Oct. 18th.*

Improvements in the Manufacture of Steel—Electricity.—The importance of carrying out the steel manufacture of this country to as great a degree of perfection as possible, and thus render us independent of other countries, is a subject which has long occupied the earnest attention of metallurgists & manufacturers. That there are ores of iron within our reach which give every facility, for such result has long been proved by lahoratory experiment, and we have no doubt will eventually be successfully effected on a large scale. Many unsuccessful attempts have been made to reduce the ores, and effect the carbonisation of pure iron by means of electricity, but we are happy in now being able to state that at the present moment much interest is shown in a process by which an electric current is employed in producing a superior quality steel, direct from the ore. This process is the discovery of Mr. Adrian Chenot, of France, whose perseverance has at length given practical proof of the advantages of the employment of this subtle agent in commercial manufacture. Mr. Chenot, we understand, has by this process made considerable portions of steel, of superior quality, 30 per cent under the present cost, besides performing in 10 days what required 40 on the old system—a vast economy in time and, labor. The principal features have nothing in common with processes at present in use but consist in the first place, of an electro-sorting machine, to separate the crushed ore, and to bring it to its maximum standard of pureness, according to which is the resulting steel. A system of cementation, or addition of carbon and other matters, by a *cold process,* by which this delicate part of the manipulation can be effected in well-determined and exact proportions; and in a peculiar method of producing a sponge from the ore. The whole metallic process, is accomplished with an economy of 50 per cent. in fuel and manual labor, welding, melting, &c. Mr. Chenot asserts that he can manufacture steel for $160 per ton, on his premises at Clichy la Garrenne where fuel and labor are both dear, superior in quality to steel sold in Paris at $500 per ton. We understand that a meeting of some of the principal English ironmasters has been proposed to take place in London, with a view of appointment of a commission to test the value of the new process. We shall watch the process of the affair with much interest, and record all facts connected with the subject.

Montreal and Bytown Railway.—We learn with pleasure, that the thirteen miles of this road between Carrilon and Greenville, will be opened for travel in the beginning of the ensuing week. The croakers who have all along stated that the corporations would have no security for the money it has advanced, will be doubtless be agreeably disappointed. Our contemporary, can probably tell us what security the Grand Trunk contractors have given for the £1,000,000 said to have been paid to them —*Montreal Com* Oct. 21.

We regret to learn that the cars have been taken off the Railroad between Springfield and Delaware, and all business on it is entirely suspended. Whether this is caused by want of business to do, or by the embarrassments of the company, we are not advised. Gen. Anthony has resigned the Presidency of the road. There are many roads in the State suffering severely from the general stagnation of business, and we should not be surprised to hear of others suspending operations during the winter.—*Xenia Torch Light,* Oct. 25.

From the Cleveland Herald.

SPONTANEOUS COMBUSTION OF BITUMINOUS COAL.

Messrs. Editors:—Many of your readers will probably remember the consecutive destruction by fire of several vessels loaded with coal, on their way from Baltimore to California, some months since. These accidents excited much speculation at the time as to the origin of the fire, which was, however, generally referred by scientific men to the *cargo;* knowing as they did that some varieties of bituminous coal, under certain circumstances, were liable to spontaneous ignition.

Of this truth, doubtless, Baltimore coal-shippers and insurance companies have made practical application, by increasing their rates of transport and insurance on cargoes of this substance—but perhaps no parallel instance has heretofore elsewhere occurred rendering it necessary for shippers or consumers of bituminous coal, to provide against the possibility of spontaneous combustion. I have, however, through the kindness of M. C. Younglove, Esq., been permitted to witness an instance of the spontaneous combustion of bituminous coal which has interested me much, and which, from its bearing on the interests of all who deal in coal or use it in considerable quantities, may be worth reporting.

Messrs. Younglove and Hoyt have used for years in the furnaces of their extensive steam paper-mill in this city, our bituminous coal. Of late years they have found it most economical to employ the "slack" or small coal, which differs in nothing but in the size of the lumps from ordinary marketable coal. Of this coal they have usually obtained their winter's supply during the summer months, taking it directly from the boats and piling it on their dock—plank resting directly on the earth—in heaps of from 25,000 to 35,000 bushels. These heaps are exposed to the weather without protection, and have been so deposited and used for a succession of years without accident, and without apparent deterioration. This year their coal has been received as usual, and forms a heap of an oblong form—at its base some 40 feet long by 20 wide, and from 8 to 10 feet high—containing some 25,000 bushels or more. A few days since the proprietors of the establishment received intimation from their engineer that "their coal heap was on fire, as it was hot all over, and steam was rising from it." On examination they found it even so. The heap was sensibly hot on all sides, and a plank lying on the top so hot as to be painful to the hand applied to it, and on digging to the bottom they found a portion of the coal fully ignited, and which blazed up brightly on the admission of air. They immediately turned a copious stream of water on the top of the heap to extinguish the fire. I examined the coal heap the next day with Mr. Younglove. We found the fire partially extinguished by the water, but apparently through all the interior, a stratum of coal from 1 to 2 feet thick, lying next the planking, was perfectly coked, and some of it still ignited. The planking was completely charred.

The coal used by Messrs. Younglove & Hoyt is the "Chippeway," one of the best and purest varieties to be found in our market. The fire was in this case unquestionably due to spontaneous combustion, as the exterior of the heap on all sides was composed of coal which had suffered no change, but was found as fresh and bright as when mined; only the interior and most inaccessible portion of the pile was ignited. The combustion was without doubt excited by the decomposition of the bi-sulpburet of iron—that is, the change of the sulpburet into the sulphate (copperas) by the absorption of oxygen.

This instance of spontaneous combustion in our bituminous coal, will suggest to those in the coal trade, and to consumers, the propriety of at least keeping in mind the fact that coal *may* spontaneously ignite, and that large heaps of small coal should not be permitted to be for months undisturbed, nor be placed in combustible receptacles, or in such relations to combustible matter that spontaneous combustion, if it should happen to occur, would be productive of disastrous consequences. It must be confessed, however, that the danger is not great, that the peculiar circumstances necessary to spontaneous combustion will co-exist in any considerable number of cases—according to the law of chances, the probability is exceedingly small that such will be the case—and yet the bare possibility of the thing should put us on our guard, and lead us to protect ourselves against it.

Yours respectfully, J. S. Newberry.

CROSSING THE BLUE RIDGE.

From Charlottsville the Virginia Central Railroad crosses the Blue Ridge and terminates for the present at Staunton, the chief town of Augusta county. The passage over the Blue Ridge in the cars is an interesting adventure. The grade is at the rate of two hundred and fifty feet to the mile. You approach the mountains for some time without realizing an ascent, until you appear to have reached them and to be at their very feet. Their lofty barrier blocks your path, and it seems impossible to surmount them. But the track slants up their steep sides, curves through their indentation, and winds round their projecting points until the summit is reached. Before encountering the highest grades of ascent—the real "tug of war"—the train stops, separates all superfluous cars, throws off every unnecessary weight, and takes a locomotive of the greatest power, with a working apparatus adapted to the occasion.—From that moment there is an evident struggle. The motion is slow, at the worst points scarcely perceptible, and doubt seems to hang over the struggle; but the laboring locomotive conquers at last, through the o'ermastering power of steam, and you still go up the steep ascent. The mountain-sides are nearly perpendicular, and frightful is the abyss below as you look out of the windows of the car. Sometimes the hollowing indentations of the mountains are so deep and rough that instead of pursuing them, the track crosses to an opposite projection on a frame of timber work, fifty, or sixty, or seventy feet in height, only wide enough at the top to receive the rails. The sight is fearful indeed as you move over this apparently frail pipe-stem structure. At some curves you can see the cut made by the track ahead so far above that it seems absolutely impossible for a train to rise to it. But the iron horse snorts and pulls and climbs on victoriously.

In the mean time nearly a thousand feet, almost literally, below you is the county of Nelson and the contiguous tracts of Virginia, presenting panorama of varied beauty such as no imagination can depict. The whole scene of plantations, forests, roads and streams, is spread out like a carpet of flowery figures as far as the eye can stretch. A tunnel is already in process of construction thro' the Blue Ridge; when it is completed the traveler will no longer experience the romantic sense of peril or of beauty which the present mountain-track affords. He who loves to pass through such adventures or to behold such landscapes, had better cross the Blue Ridge by the Virginia Central Railroad before the tunnel destroys the romance of danger and substitutes Egyptian gloom for the glorious scenery now displayed to the admiring tourist.

EXPANSION OF CAST-IRON BY SUCCESSIVE HEATINGS.

In the memoirs of the Industrial Society of Hanover for last year, there are some interesting remarks on this question. The remarkable phenomenon that cast iron presents on being heated, of not returning back to its original volume, but of continually showing an increase of that volume, and of permanently acquiring an enlarged volume by successive heatings and coolings, had been first observed by Rinsep, in 1829. That chemist found that a cast-iron retort, whose capacity was exactly measured by the quantity of mercury which it could contain, held at first, 9·13 cubic inches; after the first heating and cooling, 9·64 inches; and after three heatings, up to the melting point of silver, 10·16 cubic inches. The cubical expansion ought, therefore, to be 11.28 per cent., which gives 3·76 per cent. nearly of linear expansion.

At subsequent periods different phenomena were observed, more or less confirmatory of this law. The cast-iron bars of grates, where powerful fires were made, were frequently observed to elongate, so as to become jammed tight in their frames, and when these obstructed all further enlargement, the bars became curved or twisted. M. Brix in his work on the calorific power of the fuels of Prussia, has detailed a few experiments on this subject. By the aid of several measurements, he has shown that the entire permanent elongation increases after each successive heating. but that the amount produced by each heating diminishes the more frequently the bar is heated, until it finally becomes insensible. Thus, a furnace bar 3 1-2 feet long, after being three days exposed to moderate fire, had already acquired a permanent elongation of 3-16 of an inch, or ·446 per cent., at the end of seventeen days, 1·042 per cent.; and after thirty days, 2 per cent., but had not yet reached its maximum. Another bar of the same kind, after a long service, had a permanent elongation of 3 per cent.

If it be remembered that bars, while exposed to the fire, undergo another temporary elongation, we must agree with M. Brix, that an allowance of 4 per cent. of its length should be made in a bar which has not as yet been used, for this cause of elongation. The bars must, of course, be sufficiently long to stand between their supports when cool, but it seems that hitherto sufficient room has not been given for this permanent expansion in laying down new bars.

Discovery of Anthracite Coal in Ireland.—In the geological section of the British Association, on Tuesday last, the 26th ult., Dr. John Irwine Whitty, LL. D. Civil Engineer, 4 Trafalgar-square, London, read the report on the discovery of a large bed of authracite coal, four feet in thickness, in the county of Cavan, which he was appointed to examine; in a locality where fuel can with difficulty be obtained for the burning of lime, so requisite in all slate countries, and moreover, in the Grauwacke or Silurian rock formation, where the appearance of coal has been hitherto an anomaly almost unknown to geologists, with the exception of that described by Prof. Harkness in Scotland, which Dr. Whitty supposes, from the strike of the rocks, may be a continuation of the same vein throughout the counties of Down, Armagh, and Monaghan. A specimen of the coal analyzed, presents the following constituents:

Carbon	77.65
Water	4.35
Ash	18.01
Total	100.00

It contains no bitumen, but a far greater proportion of carbon (as Professor Harkness subsequently observed) than any fuel of the same class hitherto known, even the celebrated Boghead coal, and is therefore invaluable for furnaces, steam engines, etc.

The mode which Dr. Whitty proposed for working the mines was entered into, and in conclusion he remarked that owing to the convolutions of the system in which this coal exists, the lowest, and consequently the most contorted, of all the stratified rocks, it most probably re-appears at the surface in other localities which he suggested, and that the discovery of this valuable substance in a formation where it was supposed least likely to exist, ought to stimulate to increased exertions in the examination of the country, as many minerals undoubtedly exist unknown to the proprietors of the soil which might be otherwise rendered a fruitful source of commerce.

Professor Harkness expressed his concurrence in the opinion that the coal discovered by Dr. Whitty is a continuation of that described by him in Scotland, and Dr. Griffith corroborated the statements generally put forward. It should be observed that since the discovery of this coal, several tons have been raised and sold in the neighboring towns; but the death of the Bishop of Kilmore has, for the present, put a stop to the formation of a company to carry out operations effectively.

—*Thursday, Nov.* 2

MONETARY AND COMMERCIAL.

During the week we cannot quote any change for the better in our monetary affairs. Currency is exceedingly scare, and the Ohio and Kentucky Banks are contracting rather than increasing their circulation. In this state of affairs, we may not look for a good supply in business circles, even though it were in the hands of Banks, until exchange is lower. Loans are difficult of negociation, those granted by the Banks are confined almost entirely to parties whose paper they already hold. Some parties who have surplus capital, are granting temporary loans to first class houses at 12 per cent per annum. But lenders find no difficulty in obtaining from 1½ to 3 per cent.

A proposition has for sometime been talked of in our Commercial circles, of a Merchants Bank with capital of large amount. This has assumed a definite shape, and will probably be carried through, some $200,000 having been subscribed. The Bank will issue notes, discount local paper at legal rates, pay no interest on deposites, and do in all respects a legitimate banking business.

As to Indiana money, there is more confidence felt in monied circles. The result of the Lonisville mission was of a satisfactory nature. Dr. White who was dispatched from Lonisville to examine into the state of the Free Banks, submitted a verbal report to a meeting of the citizens of that city held on Thursday, in which he expressed the belief that the State Stock Banks are all perfectly able to redeem every dollar.

The new statement published by the Auditor a few days ago has tended to thus increase the confidence, the withdrawal of the money and substitution of eastern exchange is continually going on, to the amount of from $30,000 to 50,000 a day.

Eastern exchange had advanced to 1¼ @ 1½ per cent., it is however, not very brisk at that rate.

At the East the stringency in the money market is not yet over. Shipments of specie still continue larger than the receipts, creating a heavy drain; in consequence of which the city banks are curtailing and contracting as far as they can.

The stock of specie at present in the Banks is a little more than $10,000,000. The arrival of the California steamers, one of which was past due, added $1,972,000 to the stock of specie, and relieved the anxiety in regard to the reserve in the Banks.

Immediately upon the announcement of the George Law, stocks went up ¾ to 1 per cent, the reaction being quite general. Rates for money continue high, and loans for any length of time are difficult to obtain. The Journal of Commerce of Saturday, says that "there is an active demand at the note brokers for business paper, and prime signatures sell very readily at 10 per cent."

We quote first class business paper 10@12 per cent. Demand loans on Stock collaterals are made at 12 per cent.

We select the following sales from those at the New York Stock Board oo the 23d:

NOTE.—The timber on the Madawaska and Pittawawa Rivers cannot reach market before the end of June, and much of it not before the middle of July.—*Quebec Colonist.*

NASHVILLE AND NORTH WESTERN R. R. Co.—From a letter of the Secretary of this Company we learn they are making as good progress as anticipated, and expect soon to put the whole road under contract.

Memphis and Grenada Railraad — Meeting of Stockholders.

The annual meeting of the Stockholders of the Mississippi and Tennessee Railroad, was held at Hernando, Mississippi, on the 11th inst., and the following named gentlemen elected Directors for the ensuing year—viz: H. C. Walker, J. M. Patrick, Memphis, Tennessee; H. Dockery, and J. C. N. Robertson, DeSoto county, Mississippi; F. M. White, Daniel S. White, and Thomas Bradford, Panola county; N. Howard, Samuel Gardner, Yallaboosha county.

The new Board was organized by the election of Col. F. M. White, President, Calvin F. Vance, Secretary and Treasurer, and Minor Merriwether, Chief Engineer. Reports were read from these officers, exhibiting the affairs of the Company in a highly favorable condition, from which we learn that contracts for the graduation, bridging, masonry, crossties, and laying track from Memphis to the south bank of the Yallaboosha river, a distance of fifty-five miles, have been made with responsible men; the work to be completed to that point by January, 1856, one-fourth payable in stock.

The authority asked for hy the Directors to issue the bonds of the Company to the amount of $700,000, was voted by a large majority—nearly two to one; but we are informed that no bonds will be issued till the first fifty-five miles are completed and equiped, the resources of the Company enabling them to put this much in operation without the aid of the bonds. This policy will certainly afford a solid basis of credit, and if the same prudent counsels prevail which have thus far characterised the management of the Road, its success is certain. We understand the President will start North in a short time to make arrangements for the iron, as some portion of the grading will be ready for reception of the rails early in the spring.—*Weekly Eagle and Enquirer, Memphis.*

C. C. & C. RAILROAD COMPANY.

To the Directors of the Cleveland, Columbus & Cincinnati Railroad Company—

Gentlemen:—As I can not devote my undivided attention to the business of the Company, I deem it a duty to lay before you my resignation of the office of President—to take effect if agreeable to you, on the first day of November next.

For the generous confidence and support extended to me while acting as the executive officer of the Board, I beg leave to tender you my sincere and grateful acknowledgments.

I am, gentlemen, with great respect and esteem,
Your Obedient Servant, H. B. Payne.

At a meeting of the Directors, Alfred Kelley, Esq, offered the following resolution, which was unanimously adopted:

Resolved, That the manner in which Henry B. Payne, Esq., has presided over the affairs meets the unqualified approbation of this Board, and that the thanks of the Board be tendered to Mr. Payne for his able and efficient services as President.

Cleveland, Oct. 17, 1854. [*Clev. Her.*

A RUSH FOR LAND.

It is stated that on the opening of the Land Office at Palmyra under the Graduation Law, there were three thousand persons present, and Monday and Tuesday, the 9th and 10th, were occupied in drawing lots for their turn by the parties desiring to make entries.

At Fayette, there was also an immense throng and the number who drew lots was sufficient to give, at least, a months constant employment to the Register.—*Journal, Col. Mo.*, Oct. 19.

HIGHEST MOUNTAIN IN THE U. STATES.

The California papers by the last steamer, give an account of the ascent of one of the Oregon Peaks, known as Mount Hood, which has been ascertained by measurement to be 18,361 feet. This is the highest peak on the North American continent, and one of the highest in the world. The mountain was ascertained to be volcanic, smoke being seen to issue from the summit. The peak of Mount Hood is thus described:

"We found the top similar to that of Mount Helens—extremely narrow, laying in a crescent shape. Mount St. Helens facing the northwest by a crescent, while Mount Hood faces the southwest. The sharp ridge on top runs from the southwest to the north, making a sharp turn to the west at the north end. The main ridge is formed of decomposed volcanic substances, of a light reddish color, which comes from 20 to 50 feet high at intervals of a few rods.

"These cones or rocks are full of cracks or fissures, as if they had been rent by some convuision of nature at a remote period.—Between these cones there are numerous holes, varying from the size of a common water bucket down to two or three inches in diameter. Through these *breathing-holes*—as we shall call them—and through the crevices in the rocks, there is continually escaping hot smoke or gas, of a strong sulphuric odor. In passing over the ridge for near half a mile, we discovered a large number of these breathing-holes; through some the heat was more intense than in others.

"We did not carry up a thermometer, therefore we could not get the exact degree of the heat; but from holding our hands over several of them, we have no doubt that the themometer would have shown "boiling heat" in some of them."

RAILROAD EARNINGS.

The carnings of the Eaton & Hamilton Railroad for 8 months of the Fiscal Year 1854, compared with those of the corresponding period in 1853, are as follows:

	1853	1854
February	$6,826 47	$11,624 44
March	6,065 36	10,721 62
April	5,097 56	7,922 93
May	6,741 76	8,075 66
June	6,033 85	7,461 64
July	4,879 21	6,188 54
August	6,064 18	8,068 79
September	6,453 76	9,025 50
Mail Service	770 94	1,300 00
Total	$48,953 09	$70,308 52
		$48,923 09
Increase		$21,465 43

In 1853 the receipts were on 39 miles of road; in 1854 the receipts are on 36 miles; the latter being the actual length of the Eaton and Hamilton Road.—*Register*, Eaton, Oct. 26.

Earnings of the Cleveland and Toledo Railroad for the first two weeks in October:

1854	$36,169
1853	24,927
Gain	$11,242

—*Com. Republican*, Toledo.

The work on the depot buildings for the East Tennessee and Georgia railroad at this place, is being rapidly prosecuted. The Tennesso and Virginia road are also erecting various shops and buildings on their grounds intended for the use of that road. In fact, quite a town is springing up at the junction of these two roads, in anticipation of their early completion to this point.

☞ The carnings of the Chicago & Rock Island Railroad for the month of September, 1854, were:

From passengers	$76,303 24
From freight and mails	56,459 00
Total	$132,762 24

[*Chicago Tribune.*

GAS.

Aubin's Patent.—We are agents for this new and improved furnace, and having had one in operation at our office for several months past, can confidently recommend it as being simple in its operation, occupying little room and furnishing a pure and beautiful burning gas. From the peculiar arrangement of the retort it is not liable to *burn out*, thus saving a great part of the expensive repairs of other furnaces. We are prepared to erect these furnaces at our own risk and warrant them to produce good gas.

T. WRIGHTSON & CO.,
167 Walnut-st., Cin'ti.

TO RAILROADS AND CONTRACTORS.

Horse Powers.—The undersigned being agents for the sale of R. H. Pease formerly Emery & Co.'s Horse Powers, are prepared to furnish them to order. They occupy little room and do their work effectually. T. WRIGHTSON & CO.

RAILROAD MAP.

WE have now ready A Railroad Map of the West, containing all the railroads constructing, completed, or proposed in the States of Ohio, Indiana, Illinois, and Kentucky, and portions of Wisconsin, Michigan Pennsylvania, Virginia, Tennessee and Canada, showing the termini, points upon the lines, connections, &c. of each line, all laid down accurately, by a compete t hand.

The size of the sheet is 24 by 38 inches, and can be sent by mail.

Price—plain..... 40 cents.
Colored in outlines..... 50 cents.
Full colored..... 75 cents.

Liberal discounts will be paid to those wishing them in quantities.

Railroad companies desiring a map to illustrate their road cannot find one offering greater inducements as to correctness, &c., or on better terms; as any line can be made prominent, with its connections, &c.

All orders addressed to J. A. James will secure prompt attention.

NOTICE TO CONTRACTORS.

PROPOSALS are requested until the fifteenth November next, for the graduation and masonry of twenty miles of the Third Division of the Pacific Railroad of Missouri, extending from Gray's creek, near Jefferson City, to the summit of the country westward. The work is divided into sections. Payments will be ninety per cent. in cash and ten per cent. in bonds.

A profile of the work and the quantities can be seen at the Resident Engineer's office, Jefferson City, or at the office of Kirkwood, Porter & Co., at the same place, where further information can be obtained of Mr. Porter. The line is ready for examination and the work can be commenced forthwith.

Proposals will also be taken, any time during the next six weeks, for fifty miles or more of the work beyond the above-mentioned twenty miles, subject, however, to the directions of the Railroad Company as to the time of commencement of this last-mentioned work.

Information as to the general character of the work can be obtained at the Engineer's office of the Pacific Railroad Company, St. Louis.

KIRKWOOD PORTER & CO.

Jefferson City, 24th Oct. 1854.

The Cleveland Herald and the Chicago Tribune, will please copy the above until the 12th November, and send their bills to Marvin Porter, Esq., Jefferson City, Missouri. nov. 2-2w

RAILROAD HOTEL.

CINCINNATI, O.

THE GIBSON HOUSE, Cincinnati, is situated on Walnut-street, between Fourth and Fifth, in the immediate neighborhood of all the Railroad Offices. For comfort and convenience it is believed that this hotel is unsurpassed. It is heated with steam from the first floor to the fifth, thus making it the most desirable winter house in the West. The proprietor hopes to enjoy a share of the patronage of Railroad men.

A. WETHERBEE, Proprietor.

THOS. M CASH,

PHILADELPHIA RAILWAY AGENCY.

For the purchase of all articles required by Railway Companies, On Commission.

Office, No. 80, South Fourth-street, near Walnut,

PHILADELPHIA.

CHARLES FRODSHAM'S

IMPROVED WATCHES!

BEGGS & SMITH,

JEWELERS,

No. 6 West Fourth St.,

Adjoining the First Presbyterian Church,

CINCINNATI, O.,

HAVE received from Mr. Simon Willard, Boston, Agent for the United States, the sole and exclusive agency for the sale of **CHARLES FRODSHAM'S** NEW SERIES OF IMPROVED CHRONOMETER WATCHES, in the states of Ohio, Indiana, Illinois, Michigan, Iowa, Wisconsin, Missouri, Kentucky and Tennessee.

In the Watches of the New Series, Mr. FRODSHAM has succeeded by a more perfect method of compensation, a more correct adjustment in isochronism, and an entirely new and peculiar construction of the train, by which more power is obtained without increase of size, in producing timekeepers of wunderful and unrivalled accuracy. The great importance of the improved watches is a perfect regularity of time under every variety of climate, motion and position. So perfect are the adjustments, that the most violent exercise, such as horseback riding, jumping, etc., produces on them no sensible effect They are therefore, particularly adapted to Railroad purposes.

Liberty is given to refer to the following gentlemen, who, among many others, have proved the excellence of Charles Frodsham's Watches as timekeepers:

Gen. John S. Tyler		Massachusetts.
John E. Thayer, Esq.		"
Enoch Train	"	"
E. C. Bates,	"	"
F. W. Thayer,	"	"
Wm. Whiting,	"	"
Geo. M. Thacher,	"	"
David Dyer,	"	"
Alvin Adams,	"	"
Billings Briggs,	"	"
D vid Weld,	"	"
Hon. Ebenezer Lane,		Sandusky.
E. F. Osborne, Esq.		Ohio.

The Prices of the New Series Gold Cases, are According to Size, viz:

SIZE 12	
" 14	$230
" 16	
" 18	250
" 20	275
" 22	300

Recommendations:

Boston, Sept. 3, 1853.

The Compensated Lever Watch I purchased of you, made by Charles Frodsham, London, No. 7300, has varied but thirty seconds from mean time in six months, by actual daily comparison with your regulator.

Yours, &c., ALVIN ADAMS.
Mr. Simon Willard.

Boston, Feb. 4, 1854.

Mr. S. Willard Dear Sir—The Frodsham watch, No. 7557, I purchased of you last October, has performed wonderfully well. I have compared it almost daily by your Astronomical clock, and its variations for ninety days is but one second, or a loss of but one-hundredth of a second per day. I consider it better than any Marine Chronometer I ever used.

Yours truly,
FISHER A. NEWELL,
Late master of Sch., Honolulu.

Sandusky, Ohio. Jan. I, 1854.

Mr. S. Willard, Dear Sir—More than six months ago I purchased of you two of Frodsham's best watches—up to this time, one of them, No. 7573, has altered from mean time but twenty-seven seconds. and the other, No. 7517, but twenty-three seconds in the same period.

Yours, respectfully.
E. F. OSBORNE.
To Mr. Simon Willard.

Gentlemen—On the 1st of April last I procured from Mr Willard, of Boston, one of Frodsham's improved series of watches. It was regulated and set to Cincinnati time. It has not, in that period, been suffered to run down, nor have the hands been moved, and to day it is 20 seconds only slow. Respectfully yours,

HENRY O. AMES,
Sup,t Cin. Ham. & Dayton Railroad,
August 18, 1854.

To Messrs. Beggs & Smith.

The following is an extract from a letter of William Brown, Esq., Springfield, Ohio, engineer on the M. R. & L. E. R. R., who has personally kept the rate of several of Frodsham's watches.

"Finally from what I have known of Frodsham's watches, I am very strongly impressed with the idea, that they are a decided improvement on all other timekeepers, and were they set in gimballs and used with the same care, I think their performance would equal that of Mr. Frodsham's celebrated box chronometer, and would answer the same purpose for determining longitudes."

Sept. 21-6*

DENNEY'S DIVIDED CAR AXLE,

PATENTED JANUARY 31ST, 1854.

THE ATTENTION OF RAILROAD COMPANIES is respectfully invited to an examination of the merits of this valuable invention, which offers to add largely to the safety of life and property.

The valuable features of this arrangement of axle are, a saving of full fifty per cent. in motive power on crooked roads: the rails are protected from being destroyed by the flanges of the wheels coming in contact with them on the curves, as is the case with the stiff or rigid axle, which not only destroys the rail but puts a constant strain upon the wheel and axle, causing the wheel on the inner rail to trip or revolve upon the rail under the weight of the car and its load, while the opposite wheel is traversing its greater distance; the tendency of which, is to wear the wheel flat, and cause it, or the axle, to break sooner or later. There is less danger of the car leaving the track from its having become spread.

Axles fitted in this way do not require to be near so large, and yet contain more strength than the common axle, for the reason that the liberty given to the wheels, which allows them to accommodate themselves to the curvatures of the road, removes wholly the strain thrown upon the ordinary axle; and therefore, it requires no more strength of iron at any point between the wheels, than is contained in the bearings, which in the ordinary axle, is not more than one-third of the strength of the other portions of the axle.

The elongated bearing which forms the connection is so proportioned as not to wedge or become tight in the alloy, the wear being almost imperceptible, requiring to be set up not oftener than once in twelve months, by a slight tightning of the screw nuts. If, from long service, the alloy becomes worn out, it can be refilled, making it as perfect as when first filled up, and the gauge of the wheels will never become changed so as to injure the running of the car.

It is after a series of the most careful experiments, conducted through a period of time sufficient to test in the most satisfactory manner, the real merits of divided car axles, and a thorough and practical test in real service of over two years, that we now offer to Railroad Companies one that we are assured will give universal satisfaction in its operations, and both simple and cheap in its construction.

We are now ready to dispose of rights to use the above axle on the following terms: We guarantee full and perfect satisfaction by giving ample time to thoroughly test its merits, and will require no payment to be made until such satisfaction has been given. All applications to be made to

TYLER DAVIDSON & CO.,

Agents for the

BOSTON BELTING COMPANY

India Rubber Machine Belting in any quantity, from 2 to 20 inches.

India Rubber Steam Packing;

Mixed	do	do	1-32 to ¼ inch thick.
Plain	do	do	1-32 to 1 inch thick.
Pure	do	do	

Pipe and Manhole Rings, all sizes;

Square or Rope Packing, do.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agen of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.

2d, They are a great deal cheaper.

3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations. This is a new and important invention. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the COLDEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils,-10 casks, assorted weights now in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Leland's Superior C. S. Car and Auger Bitts.—All sizes.

Brass Kettles, and Sheet Brass, &c.—Brass Kettles, assorted from 6 to 30; Sheet Brass assorted from No. 0 to 30; Brass Wire, do do do.

Star Breast Chains.—Four casks of those superior double-linked Chains, just received.

Walker's Trace Chains.—70 casks of those superior goods, warranted full length and sizes, 8 to 20 links, straight and twisted, now in store.

American Anvils.—Eagle brand, faced with with cast steel, and warranted by the manufacturers equal to Armitage's Mousehole.

Plated Spoons.—Plain, tipped, and threaded heavy plate, on best quality of German Silver.

Premium Gimlet Screws.—10,000 gross just received.

Mill Saws. Hoe & Co.'s C. S. Wm. Rowland's, and W. H. Rowland's 6, 6½, 7, 7½, and 8 ft

Cross Cut Saws.—Hoe & Co.'s C. S., Johnockerell's C. S. and G. S., Wm. Rowland's and W. & H. Rowland's 5, 5½, 6, 6½, 7, 7½, and 8 feet Also, 4 and 4½ feet Tennon Saws.

Axes.—1000 doz. Axes, assorted Yankee and Kentucky patterns, first, second, and third quality

Nails.—4000 kegs Shoenberger's and Wheeling Nails, now in store.

Sep. 7, tf. WM. H. SMITH, Conductor.

NOTICE TO CONTRACTORS
Mobile and Girard Railroad.

SEALED PROPOSALS will he received by the undersigned at this office, until the first day of December, for the Clearing, Graduation, Track-Laying, together with the building of all Bridges and Culverts, of the Western Division of the Mobile and Girard Railroad, extending from Mobile to Greenvile, covering a distance of 130 miles.

The work will generally be divided into one mile sections, and bids may be made for one or more of these sections. Separate proposals are desired for the Track-laying, building of Bridges and Culverts, likewise for the building of the Trestle-work, 5½ miles in length, across the Tensas and Mobile Rivers, with the intervening swamps. The trestle-work will be 12 feet high, built upon Black Cypress Piles, found in abundance and adjacent to the line; the two rivers will be crossed with the common Pile Bridging with Truss Pivot Draw in the center of each.

Specifications with the form of the contract and proposals can be had of the undersigned upon application.

Plans, profiles and estimates of that portion of the line are now ready for examination. Parties proposing will please desiguate it as such upon the envelope.

The country is healthy, with no swamps after leaving the Tensas River. From Mobile to the river, 18.5 miles the grading is light and country very healthy at all seasons of the year. After the line leaves the Tensas River, it passes through, and on the ridge that divides the Alabama and Conecuh waters, easy of access by the Alabama River, and through a section of country well stocked with provisions.

Payments will be made one-third (⅓) in current funds, one-third in the capital stock of the Company, hearing (.08) per cent. interest payable in stock, until the road is completed, then to cease and become common stock of the road, and relying upon the earnings of the same for dividends; the balance (⅓) one-third to be paid in the (.08) per cent. convertible bonds of the Company, maturing in (5) or more years, at the option of the contractors, coupons payable semi-annually either in Columbus, Ga., Mobile, Ala., or at New York, at the option of the holder.

To bidders personally unknown to the undersigned, bond and approved security will be required to an amount not exceeding (¼) the amount of the contract, for the timely and faithful completion of the same.

22½ miles of the road from Girard west, will be open for business the first of November, and 52 miles 9 months therefrom; it is the intention to have the entire line of 245 miles open for business early in 1858.

Sept. 28, 1854-9t. GEO. S. RUNEY.

Baltimore & Ohio Railroad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was opened to the Ohio River in the spring of 1853, and has already established a high character with the business community of the West. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of the country through which it runs, and its many admirable provisions for the expedition, comfort and safety of travelers, it has received such favor as a passenger road, (with its present connections,) as to show that it will become the preferred route for all portions of the West and South-West as soon as its further connections are formed by the completion of the Central Ohio, North-Western Virginia and other Railroads now rapidly finishing.

FOR PASSENGERS BY THIS ROUTE,

Through Tickets from all Parts of the West,

ARE NOW SOLD IN

Cincinnati, Louisville, Madison, Indianapolis, St. Louis, Chicago, Toledo, Detroit, Cleveland, Columbus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED

For Sending Travelers Direct to
WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION

The fullest accommodations are provided. In motive power and Cars, the company has abundant resources, which are being further extended to meet the demands of Western Trade. In the dispatch and regularity of transpart, and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road connects directly in the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,

The numerous Steamers of the Parker Vein Line to New York and Boston, the Ericsson Steamers by Canal to Philadelphia and New York, And various other Lines of Steamers and Sailing Vessels to the Eastern Ports, and to Richmond, Norfolk, Charleston, Savannah, etc.

J. B. FORD is the Company's Receiving Agent at Wheeling.

M., connecting at Lexington with the stage lines for Danville, Winchester, etc., and with the afternoon train of the Lexington and Frankfort road, for Frankfort and Louisville.

Returning, leave Lexington at 10 o'clock, A. M., and arrive at Covington at 4.35 P. M., in time for the Evening Express Trains North and East.

The Accommodation Train leaves Paris at 5.30 A. M., stopping at all regular and flag stations and arriving at Covington at 10 25 A. M.

Returning, leave Covington at 2.40 P. M., stopping as above, and arriving at Paris at 7.25 P. M.

Through passengers by this train lie over night at Paris and arrive at Lexington at 8.30 next morning.

Freight Trains leave Covington daily, Sundays excepted, at 2.40 P. M.; freight received up to 12 M., for the train of same day.

RATES OF FARE.

Covington to Lexington	$3 00
Covington to Paris	2 40
Covington to Cynthiana	2 00

FOR THROUGH TICKETS,

Apply at the Cincinnati, Hamilton and Dayton Railroad Ticket Office, W. A. Latham, Agent; Little Miami Railroad Ticket Office, P. W. Strader, Agent; or at the Depot, Covington.

J. M. DOUGHERTY,
Superintendent.

☞ The Omnibus Line will call for Passengers in any part of the city, by leaving directions at the above offices.

CLAYTON & GRANT.
oct. 17.

Cincinnati, Wilmington and Zanesville Railroad.

OPEN TO LANCASTER.—Two daily Trains, (Sundays excepted) between Lancaster and Cincinnati. On and after Monday, June 26th, 1854, until further notice, trains will run as follows:

The morning Train leaves Lancaster at 5.40 A. M., and arrives at Cincinnati at 11 15. Returning leaves Cincinnati at 3.05 P. M. and arrives at Lancaster at 9.50 P. M

The downward accommodation train leaves Lancaster at 10.05 A. M., and arrives at Cincinnati at 5.40 P. M.

The upward accommodation train leaves Cincinnati at 7.30 A. M., and arrives at Lancaster at 4.00 P. M.

Trains will stop for passengers as follows: At Amanda, Stont's, Circleville, Williamsport, Four Corners, New Holland, Washington, Rattle Snake, Sabina, Cross Roads, Wilmington, Sligo, Clarksville and Morrow; and on the Little Miami Road at Deerfield, Butterworth's, Water Station, Loveland, Miamiville, Milford and Plainville, and on proper signal by flag, or to the Conductor, at Branch Hill and Linwood, at Turnpike.

The downward Trains connect at Morrow with the Trains on the Little Miami Road for Columbus.

Lines of Omnibusses and Packets will run between Circleville and Chillicothe, and Stages and Packets between Lancaster, Logan, Nelsonville, Athens and Pomery; and Stages between Lancaster, Somerset and Zanesville connecting with the morning train from, and evening train to, Cincinnati.

Fare from Cincinnati to Washington	$2 50
" " " " Circleville	3 00
" " " " Lancaster	3 60
" " " " Chillicothe	4 00

For other information and Tickets, apply at Ticket office, corner of Broadway and Front sts, and at the Little Miami Depot, or to the Station Agents on the line.

E. W. WOODWARD,
Engineer and Superintendent.

☞ The Omnibus Line will call for and deliver passengers to and from the trains to any part of the City.

J. HOWELL, Conductor.

☞ The Company will not be responsible for baggage exceeding $50 in value, unless the same be returned to the Conductor or Agent, and freight paid at the rate of a passage for every $500 in value above that amount.

Of every style and pattern, as well as all kinds of St and Machinery required for railroads.
Particular attention will be paid to repairing, which they have every facility.
They are also prepared to contract on favorable terms for building all kinds of Machine Tools, such as Turning Engines, Lathes, Planers, Drills, Slotting, Spiting, and Shaping Machines, of every variety of pattern.
Having also a large FOUNDRY connected with the establishment, orders for Castings are solicited, and will be filled with promptness.
Car Wheels of any pattern can be furnished or short notice. Double and single plate and Spoke Wheels of all sizes constantly on hand.
☞ Communications or orders must be addressed to
OLMSTED, TENNYS & PECK,
Je.8-tf Louisville, Ky.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in
AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Resevoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may bo removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.

The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.
WILLIAM SHERBURNE,

Railroad Record.

E. D. MANSFIELD, - - - - - - Editor.
J. A. JAMES. } - - - Associate Editors.
W. WRIGHTSON, }

CINCINNATI:
THURSDAY MORNING,.....NOV. 2, 1854.

E. D. MANSFIELD,

May be found at the office of the Railroad *Record*, 106 West Fourth-street, betwecu Vine and Race, (north sido) between the hours of 11 A. M. and 1 P. M.

REMOVAL.

The Office of the RAILROAD RECORD has been removed to No. **106** West Fourth St., north side, between Vine and Race streets, in the building occupied by the Cincinnati & Cleveland Short Line, the Cincinnati, Lebanon and Xenia, and the Cincinnati & Dayton Short Line Railroad Companies.

The location is in the very center of Railroad business, and but few steps from the Burnet House. Full files of railroad reports, maps, newspapers and other documents can always be found at this office, and it will afford us great pleasure to give any information, and answer any queries on railroad matters, when in our power. We cordially invite railroad men from the country, when visiting our city, to honor us with a call, and avail themselves of the facilities of our office.

☞ **Orders tor all kinds of Railroad Printing received and promptly attended to at the Office, No. 106 West Fourth Street.**

Railroad Printing.

WE have now attached to this office an extensive **Composition** and **Press Room** and **Bindery**, under the personal supervision of the proprietors of the RECORD. With confidence, therefore, we call the attention of RAILROAD OFFICERS and others to our extensive establishment, containing every facility for turning out superior work in any and every department of the PRINTING BUSINESS.

We are fully prepared to furnish **Railroad** and other **Reports**, with or without **Maps** or other **Illustrations**, gotten up at short notice and in superior style. Also, **Blanks of any description**, adapted to the wants of the various departments of the **Railroad service**, and to the wishes and tastes of the parties.

Also, **Railroad Tickets** and **Conductors' Checks**. Our patent **Card Press**, enables us to supply any demand at **Short Notice** and in **Unequalled Style**.

Also, **Blank Books**, ruled to any pattern, with or without **Printed Headings**, and bound in the most substantial manner.

With the numerous facilities for doing the **Best Work**, we feel no hesitancy in promising full satisfaction to all who may favor us with their orders

T. WRIGHTSON & CO.,
Rail Road Record Office, 167 Walnut st Cin.

EFFECT OF THE STOPPAGE OF RAILWAYS ON MONETARY AFFAIRS.

Nearly a year since, we stated that those who supposed that railways had caused the difficulties in the money market, or that arresting their progress would relieve it, were entirely mistaken;—that the *evil effects of such a measure would be far greater than the good.* The time has come when this truth is manifest, and the time is coming when it will be more manifest. We were never the advocates of new and useless schemes; but there were thousands of miles of railway lines in progress; and thousands more were planned which were so far from being useless, that they would have greatly increased the financial as well as business energies of the country. It was the interest of all persons in commercial or financial affairs, to sustain the general railway progress, till such lines were completed; for, by doing so, they assisted in sustaining themselves. In commercial as well as political affairs, there is a public opinion, which regulates all things, even to the price of money; and this public opinion, of course, receives its direction from the intelligent and well-informed circles. What in the *beginning* of the financial pressure, in the summer and autumn of 1853, did the brokers and merchants do to direct public opinion? Feeling, like other sinners, the effects of their own doings, in encouraging foreign importation, extravagance and credits, they looked round upon some other persons or business upon which to lay the blame. Accordingly, they said that "too much capital was absorbed in railways, rival lines, extravagant schemes, humbug, etc." There were unquestionably railway lines making and proposed, of which this might be truly said. But of all the railways constructing in the country, not one in ten was liable to this objection. Nine-tenths of them would not only add to the facilities of business, but to the wealth of the nation, and the aggregate of capital. But the brokers and merchants (generally)—especially in New York—went on to create a public opinion, that there were too many railways, and that capital must be changed from that direction to that of trade. We said, that they would "*kill the goose that laid the golden egg;*" and have they not done it? We call the attention of our readers to the following *facts*, which are incontrovertible, and which we affirm *were the direct effects of an unnecessary panic*, created by bankers and merchants, and which never would have existed, had the *same effort been* made to *arrest foreign importations;* for then the panic would not have been directed on railways, but on the true cause of difficulty, *extravagance and extended mercantile credits.* But, to our *facts:*

1. In the spring of 1853, the Western Banks had about *twelve millions* on deposite in the Banks of New York. The first money *cramp* was felt in railway securities; but these securities were nine-tenths issued by companies in the Western states. These companies, rather than make sacrifices, turned for aid to the local Banks, and these Banks did aid them, *by withdrawing their deposits in New York.* In four months time, the Western deposits in New York were reduced eight millions of dollars!

2. The Banks of New York could not sustain this, without curtailment; for this was equivalent to a loss of eight millions in gold, or thirty millions in credit. Then came the second *cramp*, on the bankers, brokers, and financiers of New York. The Banks did curtail, and the Stock brokers could no longer sustain fancy prices. Then commenced the fall of Stocks, which, however, were still sustained at moderate prices, by the stability of the merchants and capitalists, who held the Stock for *bona fide* investment.

3. But as the railways diminished the sums paid out, the retail merchants collected less to pay, and then came the third *cramp* on the merchants, who, with bankers and brokers, ceased to buy, and began to sell railway Stocks and Bonds, till the prices became miserably low, and a general panic ensued.

4. Then came the fourth *cramp*, on all dealers in Stocks, some of whom commenced a series of frauds, and we had the Cranes, Schuylers *et id omne genus.*

5. Then came the fifth *cramp*, in commercial faith, men doubting one another; and when debtors failed, attributing that to dishonesty, which is often caused solely by the temptations placed in their way by other men.

6. But the sixth *cramp*, which is now approaching, is to the great body of the community, worse than either of the others. It is the consequence flowing from *throwing out of employment* tens of thousands of laborers, mechanics, and others, at a period of high prices, when the agricultural ability of the country is much reduced. With this comes also a great reduction in the sales of retail merchants, and a consequent reduction in the sales and income of the mercantile classes generally. This effect will be more generally felt than any other, for it comes home to a numerous class of persons.

The worst effects of the panic, created by those who should have known better, are felt by those who are least able to bear them. Thousands of people of small property have lost nearly all their means of support, by bad money, or failing bankers or broken merchants, or depreciated Stocks. It is some consolation to know, however, that many of the men who killed the goose, have lost its golden egg, and found out, when too late, the gross folly of their policy. The railway Stocks have probably reached their lowest point, and after a little settling down of the

confused elements, the railway corporations will be in an easy and prosperous condition. Stocks will rise, and all the good schemes be completed. "There is a good time coming," in spite of croakers, brokers, fools, or knaves. The country is, as we have repeatedly proved, really prosperous and rich, beyond all precedent. There is money enough in it. There is a people energetic beyond all human example. There is a commerce greater than the world has ever seen in one nation. There is an activity of mind never before exhibited. There is a vitality of national power which is rapidly acquiring the real dominion of the earth.

RAILWAYS, the greatest commercial invention which science has ever given to the world, will go forward in the U. States, till, in twenty years, we shall have *one hundred thousand miles* of these great Iron Highways.

This great people will not stop their career a moment, because financiers, often both weak and ignorant, get up a foolish panic. The great car will go on, burying beneath it the whole race of doubters, croakers, and drivellers.

Mississippi Central and Tennessee R. R.

From a report of the surveys and estimates of this road, addressed to the president and directors, by J. Jay Williams, chief engineer, we have some interesting particulars of the route. The route has been surveyed and located from the terminus of the Mississippi Central railroad, to Jackson, in Tennessee. Commencing at the State Line, it runs a little east of north, crossing the Memphis and Charleston railroad at a point about three miles east of the town of Lagrange, and continuing the same course about two miles farther. From this point the survey continues along the dividing ridge, between the waters of Spring creek on the east, and the north fork of Wolf river and Pleasant Run on the west, to Middleburg. Passing through the center of this place, it enters Bolivar near the male academy. The survey then continues down a small branch of the Hatchee, running through the western part of the town, to the crossing of the river, about 100 yards below the bridge, the present head of navigation; thence across the bottom, a little below the Levee, striking the high ground; thence across Gray's creek, and up a small branch of the creek to the dividing ridge between Gray's creek and Mill creek; through the dividing ridge, to a branch of Mill creek, and crossing this, up another branch, to the dividing ridge between Mill and Clover creeks; thence through the ridge, to the head of Pugh's creek, a branch of Clover; down Pugh's, to Clover creek; crossing Clover creek, it strikes up the Medon branch, passing near Medon, to the dividing ridge between Clover and Forked Deer river at Dunaway's Gap; thence through the dividing ridge at the head of a branch of Meridian creek, and down it about a mile; now leaving it, it runs across the heads of several branches of Meridian creek, to the ridge between Meridian creek and Dry creek, running down the ridge, and crossing Dry Creek on Col. Butler's plantation, continues on a straight line to Jackson; and crossing Forked Deer river a little below Chester's Levee, and terminating at the foot of Shannon street, one-fourth of a mile south of the Court-house. The maximum grade is 45 feet, except through Bolivar, descending to the Hatchee river, where it is 48 feet to the mile; the minimum radius of curvature 1910 feet, and the total length of curves, 9.71 miles; length of straight line, 41.15 miles; length of side and station tracks, 2.64 miles; total, 53.50 miles.

The estimated cost will be as follows:

GRADUATION, MASONRY, &C., READY FOR SUPERSTRUCTURE.

From State Line to M. & C. R. R.....	$29,987 79
From M. & C. R. R. thro' Hardeman co.	155,204 89
Through Madison co.....	58,860 38
	$243,053 06
Average per mile.....	4,543 86
" " including cross ties...	4,963 86

The total cost of the iron, chairs, spikes, and equipment, will be $640,821, or $11,977 per mile; of which $10,000 per mile has been provided for by Bonds of the state.

The report then proceeds to discuss the probable number of through passengers after all the connections are made, and estimates the number at 150,000 per annum. This, together with local passengers, freight, and mail service, are estimated to produce $190,385 annually, or 21 per cent. on the cost of the road.

Railroads.

NASHVILLE & NORTH-WESTERN RAILROAD.

The object of this road is to connect Nashville, in Tennessee, with western Tennessee, at a point on the Mississippi river. Looking at the geographical position of Tennessee, lying in a parallelogram, from the summits of the Allegheny mountains to the Mississippi river, it is obvious no railroad can be more important, or probably more profitable in Tennessee, than one which shall run, as this does, westwardly through the state, to the Mississippi. It will connect regions of different products, and be likely to have a great traffic.

We have before us the reports of the president (Mr. Goodman), and the chief engineer (Neil Macnealc, Esq.) Notwithstanding the great obstacles now existing to the construction of railways, yet this work, we are glad to see, is likely to go on, and be accomplished. By a recent law of Tennessee, this work is entitled to $10,000 per mile from the state, for its iron and equipments; and also $100,000 for a bridge over the Tennessee river. As the Bonds of Tennessee are amoug the best in the Union, this aid is sufficient for the purpose intended. The active means of the Compauy, therefore, are:

State aid on 156 miles.....	$1,560,000
Do. for bridge.....	100,000
Davidson county.....	300,000
Individual subscriptions.....	265,000
Aggregate.....	$2,225,000

With these means, the Company can go on; though the amount could be, and would be greatly increased in more favorable times. The road will pass through a highly productive country, both for agriculture and minerals. There are ten furnaces and three forges on the line of this road, producing annually some 20,000 tons of metal.

From the report of Mr. Macnealc, it appears that the curves and grades on this work are highly favorable. Looking to all the elements involved, it is very evident that the Nashville and Northwestern Railway, when made, will be one of the most profitable in the country; and it is quite worthy of a strenuous effort to complete it.

PACIFIC RAILROAD, TEXAS.

We learn that Mr. Walker, of the above route, has stated in several letters, that the $300,000 necessary to be deposited to secure the bonus of public land offered by the State of Texas for the building of this road, has been dispatched by three different messengers. and cannot, in his opinion, fail to reach its destination in season. No country ever needed railroads more than this state. With a soil unsurpassed in fertility, producing, in its different belts, in the same latitude, the products of the North and of the South, sugar cotton, wheat, and corn, it has no facilities for transporting the riches of its agriculture to market, but the ox team, moving ten miles a day. In such a state of things, agriculture must languish, enterprise must seek a different field for its restless and out-spreading genius; and this state, so rich in the gifts of nature, must remain long years to come a comparative wilderness, unless some happy change can be effected by extraneous means. The 500,000 people of Texas are so well convinced of this fact, that by legislative act they have declared themselves willing to be stripped of almost every acre of public domain, if they can but be supplied with railroad facilities to bring their produce to the seaboard, and induce the enterprising to settle their uncultivated fields. But it is not their agricultural wealth alone that induces them to make this liberal offer to obtain the vivifying influence of railroads; it is supposed that in the bosom of their hills are treasured minerals, whose richness and variety will at some future period give to Texas an enviable position among the mining states; and the full confidence of this makes them still more anxious to secure railroad progress and railroad enterprise.

Among their many projects, this Pacific railroad, with its northern connections yet to be finished, is one of no small importance. Aiming at a trade already established, accommodating a local business which is anxiously looking forward to its completion for facilities for enlargement, endowed with a grant of 20 sections of state lands for every mile of road, which is two and a half times as great as the endowment of any other road in the state, it is easy to judge of the comparative claims of this and other Texian projects.

But this is not the only project that is of incalculable importance to the prosperity of Texas. From Galveston, her principal seaport, stretching far up into the interior,

through a section rich and as populous as any in the state, are projected lines, which, sooner or later, must be built, all endowed with a grant of eight sections to the mile. When these magnificent schemes shall have been carried forward to completion, there will be opened to this state a new era of prosperity—a prosperity based on solid principles—a fair, market valuation of the products of her industry.

HENDERSON AND NASHVILLE RAILROAD.

In these times of adversity to railroad companies, we are glad to learn that some of our best enterprises, among the new companies, are able to go on successfully to completion. Among these is the Henderson and Nashville line, in Kentucky and Tennessee. The President and Engineer of this company passed through Louisville last week, *en route* home, from London, where they have been for the purpose of negociating funds for their work. We learn that they succeeded in making very favorable negociations for the company. They purchased a large portion of the iron for the road for two-thirds Bonds and one-third cash. The Bonds are 30 year 7 per cents, and are taken at par. The Henderson and Nashville road is about 110 miles in length, and lies between Nashville, (Tenn.,) and Henderson, (Ky.,) on the Ohio river. Henderson is nearly opposite Evansville, (Indiana,) where a railroad is already constructed to Finobusto; interseeting the Ohio and M. Railroad at Vincennes. The western part of Kentucky will thus be at once connected with Cincinnati. Forty miles of the Henderson and Nashville line is now in course of construction.

MAYSVILLE AND LEXINGTON RAILROAD.

We learn from various sources that this unfortunate undertaking is passing through a series of troubles, which may delay its completion, or altogether defeat the intentions of its projectors. It appears, that owing to the continued stringency in money, the directors of the road have been unable to make payments on the interest of the 1st mortgage bonds. A suit was brought in the Fayette Circuit Court to foreclose, in order to compel payment. The plaintiffs moved to appoint a Receiver, to take charge of the finished portion of the road, and hold the receipts, subject to the order of the court. This course was objected to by the company; but a Receiver was appointed, Mr. E. Miller. The company then appealed from the decision; and the appeal will be argued in the Court of Appeals, in December.

In addition to this, there is a balance due the contractors, Messrs. Nash, Seymour, & Co., of about $31,000, for which they brought suit at the Federal Court at Frankfort. Judgment in this case would have gone by default, as the company were not legally represented, but for informality in the proceedings.

It was a general impression that the directors would resign; and such appears to have been their intention. A meeting of stockholders was called at Maysville for this and other purposes; the proceedings of which, as published in the Maysville Eagle of Nov. 2, we give below :

At the called meeting at the Court House, in this city, on yesterday, a large number of the individual stockholders were present. The corporate and company stock were represented as follows :

Bourbon county, by John Roots Thornton, Esq.
Mason county, by Harrison Taylor, Esq.
City of Maysville, by Mr. Hamilton Gray.
Nash, Seymour & Co., by S. C. Hawley, Esq.

A letter addressed to the president, Henry Waller, Esq., from the commissioners of Fayette county, M. C. Johnson and Edward Oldham, was read. The letter authorized Mr. Waller to cast the vote of Fayette county, if necessary, with special instructions how it should be cast, if at all. Mr. Waller declined using the authority.

Martin P. Marshall, Esq , from the committee appointed at the August meeting of stockholders, to consult with the bondholders and others and ascertain whether any and what arrangement could be made for the completion of the road, made an able and very interesting speech; in the course of which he stated, that the committee were not prepared to report any definite result, or any feasible plan, for the action of the meeting. They were maturing a plan, however, to be submitted at a proper time hereafter, which he had strong hopes would accomplish the completion of the road. If $400,000 of the $715,000 required to complete the work, by the last estimate of the Board, could be raised by the bondholders and other creditors of the company, he felt very confident that the remaining $315,000 could be raised in Kentucky—in either case, upon preferred bonds of a character yet to be decided upon, and paying the holder *eight* per cent interest.

S. C. Hawley, Esq., felt equally confident that if the $315,000 were raised here in Kentucky, then some arrangement could be made by which the iron could be purchased with the same description of bonds, and the balance be raised elsewhere. Under these circumstances, the contractors, Nash, Seymour & Co., would take at least $50,000, and possibly $100,000 of such bonds.

It was announced that an appeal had been taken from the judgment of the Fayette Circuit Court, appointing a Receiver with extraordinary powers, to take full possession of the road and all its effects, with authority to lease the track between Paris and Lexington for 18 months to the Covington Company, who will alter the guage to correspond with their own track. The president, Mr. Waller, and Chief Justice Robertson, on the part of this company, and the Hon. Chas. S. Morehead, on the part of Nash, Seymour, & Co., were directed to attend to this suit in the Court of Appeals. No doubt was felt among all the legal gentlemen present at the meeting, that the decision would be *reversed*;

The president and directors having tendered their resignation,

John Roots Thornton, Esq., moved the following resolutions :

Resolved, That it is the sense of the Stockholders, that the President and Directors have discharged their official duty with ability, fidelity, and integrity, and with as great success as could be reasonably expected under the extraordinary circumstances in which they were placed, having inadequate means, in a period of great pecuniary pressure, to complete the great work in their charge; and therefore it is the further sense of the Stockholders, seeing no reason to distrust their ability, fidelity, and integrity, that the President and Directors continue in their respective offices.

Resolved, That it is the sense of the Stockholders, that either the present Stockholders, or the creditors of the Company, or both, must advance means to relieve the Company from existing embarrassments and complete the road; or otherwise the value of the stock now held by Stockholders will inevitably be sacrificed.

After an animated and somewhat protracted discussion, the resolutions were adopted without a dissenting voice except that Dr. John Shackleford qualified his vote by saying that he voted No as to the latter part of the 1st resolution, and I as to the balance.

Some other matters of some interest were discussed in a conversational manner, when,

Upon motion of Mr. Thornton, seconded by Dr. Shackleford, Martin P. Marshall and Harrison Taylor, Esqrs., were unanimously elected to fill the vacancies in the Board of Directors—all the members thereof having consented to retain their positions, Mr. Waller for the present, and the others without qualification.

LEXINGTON AND BIG SANDY R. R. CO.

This road was chartered and the company organized over two years ago. The stock of the company, as shown by its last annual report, is $1,825,000, with a fair prospect of securing a subscription of $150,000 from Fayette, and a hope of a subscription from Greenup county. The work of locating the road was not completed till August 1853. In the beginning of September, a contract was effected with Messrs. De Graff, Foster & Co., for the graduation, masonry, bridge superstructure, ballasting and track laying, on advantageous terms. This left only the cross-ties, iron, and rolling stock to be supplied. Subsequent contracts provide for the cross-ties, but no contract has been made for the iron, as it is contemplated that an extensive rolling mill will be erected on the line of the road in time to furnish the iron for a greater part of the road. This we regard as a most interesting feature in this road, and could only wish that American roads would be more American in their purchases of iron.

The cost of the road, at contract prices for grading, &c., will be about $2,350,000, and the cost of the superstructure, at present prices of iron, will be from $9,000 to $10,000 per mile, according to the weight of the rail.

The work of grading, &c., is steadily progressing; and, notwithstanding the stringency in the money market, no diminution has been made in the amount of labor performed. The work has been principally pushed at the two ends, so as to have some portion running and paying while the remainder is in process of completion. The portion from Lexington to Winchester is expected to be in use in a few months; and some time during next year, the road will be completed to Mount Sterling, 33 miles, at its western terminus, and to Grayson at the eastern end. This last portion will furnish accommodation for several furnaces, already in operation, for the transportation of their iron to the Ohio river; and this, of course, will form a large item in the earnings of this division of the road. One of the most interesting portions of the report, is the extracts from Prof Mather's Geological Report, which we copy in full :

"A bed of cannel coal, called Crawford's coal mine, was seen and examined. At another mine, about two miles distant, on a hill of the northern waters of Stinson's creek, the same seam of coal was seen, with a foot of slate above it, and twelve inches of common bituminous coal above the slate, so that both the cannel and the common coal are worked. About one half mile west of the last locality, another opening had been made, and here there were twenty inches of cannel coal, nine inches of slate, and twenty inches of common coal. All these localities are worked to a small extent, to supply Grayson, and some of the furnaces, with cannel coal for family use.

"The coal burns well, and leaves a white and scaly, fine ash.

"The out-crop and black dirt of this coal-seam were seen in very many places, and it is believed to be very extensively distributed, as a regular stratum through the hills, of many square miles

on both sides of the railroad line, on the waters of Stinson and Straight creeks."

In speaking of the different seams of bituminous coal, and their localities, Prof. Mather says:

"Opposite Gallion's house, on Williams's creek, it is four to five feet thick, of workable coal, of good quality. At the Sulphur Spring, one half mile below Gallion's, it forms the bed of the small creek that unites with Williams's creek. The out-crop of this coal was seen in many places down the valley of the creek, and it was traced extensively. Two other beds of coal, of workable thickness, were examined and traced, at short intervals, over many miles. They are about 100 and 150 feet above the Williams's creek coal, with a heavy bed of sand rock intervening. One of these is worked at the Star Furnace, and is five feet thick." He also speaks of a different seam at the Buena Vista furnace, and another at Clinton furnace four feet thick. At the latter, he says, "Mr. Patterson, the proprietor of Clinton furnace, when boring for water, passed a coal seam in the position as to depth that the Williams' creek coal ought, from the dip of the rocks, to occupy, that was fourteen feet thick according to the belief of his workmen. These three beds of coal, (excluding the last, which is beneath water level,) and one still higher, the one, it is believed, that is worked at Buena Vista furnace, and which extends through the hills in Cannonsburg and Catlettsburg, are capable of furnishing a vast amount of coal.

Professor Mather further says: Iron ores abound on the route of the railroad; from the head of Triplett's creek to the mouth of Big Sandy, but are most abundant between the Little and Big Sandy. There is probably no region of equal extent supplied with a greater quantity, or with more varied qualities of good, easy working, iron ores." These beds are not on the carboniferous limestone; of them he says: "The iron ore covering the carboniferous limestone, has already been alluded to as workable and worked, and it occurs so that furnaces may be erected within reach of the road from south of Owingsville to the head of Triplett's creek. From the head of Triplett, on all the waters of Tygert's creek, and on the waters of Big and Little Sinking creeks, Gimblet and Caney creeks, the ores of the limestone, and of the lower part of the coal formation are accessible, and many of them are of fine qualities and workable thickness, and will be worked for furnace purposes.

"Many of the ore beds, both in the hills of the Tygert and Sandy waters, were traced from hill to hill, across valleys, and over divides of the waters, for many miles, so that the quantities and qualities of the different ore beds could be ascertained. In some of the hills of the East Fork of Little Sandy, along and near the railroad line, *seven* workable veins of iron ore could be traced, and at Starr, and some other furnaces, five are worked. The ore beds are from 4 to 18 inches thick, in some 20, 22, and even 30 inches. It is 30 inches on Mr. Elijah Rice's farm, on the road branch of the East Fork of Little Sandy."

"The beds are numerous, and several are workable in every hill. A foot of ore will give 5000 tons of ore to the acre, or yield two thousand tons of iron, and supply a furnace for a year. There are several feet in thickness of ore in many of the hills."

He says there are "eight hundred square miles of land along the railroad adapted for furnaces."

Nashville and N. W. Railroad.

In an animated editorial in the Argus, of Hickman, Ky., the editor, after speaking of the prospects of this road, and its probable trade as a part of the great line reaching from the Ohio to the Atlantic, at Charleston, says:

Hickman has already felt the breath of this improvement; it has infused new life into everything—city property has risen, although there has been such an immense amount of it thrown upon the market in the last few months—lands in the county have advanced—every department of business is improving and increasing—capital is becoming more fixed—labor is better rewarded—industry is stimulated, and good morals encouraged. A few years ago we were all far from being proud of our place or the country—we had a bad character abroad, because we deserved it. It is now different; everybody speaks favorably of us. The large cities are bidding our trade—our commercial and social relations are extending and becoming more permanent, and although croakers may say "we are going too fast," it is a mistake, and the times about us show it. Our Hickman and Obion railroad, connecting with the Mobile and Ohio road in Tennessee, and forming a part of the N. and N. W. R. R., originally a joint stock association, in which a few of our enterprising citizens joined, has never yet stopped work, or failed to meet its engagements punctually. None of our contractors have failed; the local work of the whole line is half done, or more; our telegraphic line communication with the United States and all the Canadas is complete; our people have money, and are out of debt, with few exceptions; our citizens are constantly building and improving—and why, pray, are we going too fast?

These are some of the effects of railroads and commercial intercourse, when they are allowed to exert their legitimate influence. The case of Hickman is but the exemplification of a general law—is but one of a whole class. But let confidence be sapped, business be inflated by an unnatural and forced growth, currency—the means of commercial intercourse—be either withdrawn or rendered useless by panics, and it requires no ordinary influence to keep in motion the wheels of trade. For the citizens of Hickman, we congratulate them on their prosperity, and rejoice that there is one spot in the country that does not share in the general panic.

Alabama and Tennessee River Railroad.

We see it stated in the Selma Reporter, that at a convention of the stockholders of this road, recently held at Shelby Springs, it was determined to issue new bonds, or rather, preferred stock, to the amount of $200,000; which is supposed to be sufficient to finish the road to the one hundred mile station. In regard to this, the Reporter says: "The convention did wisely. Carry it to the one hundred mile station, and then it will pay handsomely." The Reporter is sanguine in its belief of the ability of the road to pay well. Through the exertions of W. Reynolds, Esq., and others, much of the stock was taken at the meeting.

At this convention, Col. Phillips resigned the presidency of the road; Col. T. B. Goldsby was elected to fill his place. The selection is considered a good one, as Col. Goldsby has been eminently successful in everything he has undertaken in life.

There is to be another meeting of the stockholders and friends of the road, at Selma, to give them an opportunity to take the preferred stock on the terms agreed upon by the convention at Shelby Springs.

DAYTON, XENIA, AND BELPRE R. R.

From an editorial in the Xenia Torch Light, we learn that the company have been adding a new first-class locomotive, and two new passenger cars to their rolling stock between Dayton and Xenia. The engine is named the Horace Pease, as a compliment to one of the directors. The trip is usually accomplished in from 28 to 40 minutes, according to stoppages. The editor says:

As an evidence of the care for the lives and safety of passengers which characterises the employees of this road, we may state that it has now been in operation five months, and that up to this time, not a single wheel has been off the track, nor has a single accident happened to a passenger upon the road. No pains are spared to render all safe and comfortable who entrust themselves to it.

Thus far the road has been remarkably fortunate. The business upon the road is in a prosperous condition. Four passenger trains are run daily, and always with good loads. This road promises well, and we hope may continue as well as it has begun.

Communications.

[We have received the following communication in a letter from a friend in Michigan, and, from the interesting nature of its information, give it to our readers.]

From what I have seen of your paper, I hope that you are not an *old croaker* in railroad matters, especially on the subject of *new and unfinished roads in the West.*

I am engaged in a new organization, under the name of the "*Grand Rapids and Indiana Railroad Company.*" This contemplated road is to run from Grand Rapids, in this State, to Hartford City, the county town of Blackford county, in the state of Indiana. From Hartford City a connection will be had by the Marion and Mississinewa Valley Railroad to Union City, and thence to Cincinnati, by roads already completed. The M. & M. V. R. R. will be constructed from Hartford City to Union City in the course of next year.

From Hartford City we shall have direct communication with Louisville by the F. Wayne & Southern Railroad as soon as it shall be completed, besides many other connections, by means of various other railroads with which we come in contact.

We are now constructing a section of only twelve miles—from Sturgis to La Grange—which we intend to complete as soon as we can. And then we will take another continuous section, and complete that; and in this manner proceed with section after section, until the whole is completed.

I think that this policy will enable us to complete the road with the least danger of getting into difficulty and embarrassment.

I think that the road, when completed, will be of no little advantage to Cincinnati. Respectfully.

MONTREAL AND BYTOWN RAILWAY. — We are happy to learn that on Wednesday last a train with passengers passed over the Grenville and Carillon section of this road, and that it will be shortly opened for traffic.—*Com. Adv., Montreal.*

Selected Railroad News.

MISSISSIPPI AND TENNESSEE RAILROAD.

The directors of this road met in this place on Tuesday the 10th inst., the whole Board being present. After receiving the report of the Engineer and other officers, among other things claiming the attention of the Board, was fixing upon the permanent line of the road; by way of Suze's Bluff us far as the Yockeny valley, was decided upon, by an unanimous vote.

We understand the Board design touching Talchatchie county to the west of Oakland, by way of Broady's creek, and thence to the air line at the head of Collin's creek.

It would appear from the engineer's report, that 59 miles of the road is under contract for graduation, bridges, trestle-work, masonry, cross-ties, and laying down the track. This certainly evinces activity and energy in the work, and betokens a speedy completion.

On Wednesday, the 11th, according to previous notice, the stockholders met for their annual election, when the following persons were chosen: J. M. Patrick, H. C. Walker, of Memphis, Tenn.; Dr. H. Dickery, J. C. N. Robertson, of Desoto; D. S. White, Major Bradford, and F. M. White, of Panola; Col. N. Howard, Samuel Garner, of Yallabusha—all members of the old Board, except Col. Garner, who was elected in the place of Maj Broady, the latter gentleman declining to serve.

The Board subsequently elected their former officers.

The question for issuing the bonds of the road to the amount of $700,000, if required, was carried by 1400 majority. — *Advance, Hernando.*

C. & M. R. R. FREIGHT BUSINESS.

The freight business on the above road the past two months has been immense; more than could possibly be well accommodated with its present facilities. As the company are obliged for the present to use the track of the Rock Island road from Juliet to Chicago, a distance of forty miles, the use of which could not be obtained for the running of freight trains, it became necessary to transport the freight between these two points by canal; hence the great delay that has been occasioned in the forwarding of merchandise destined for this city and points below.

A few days since, we made a flying visit to Joliet, in order to ascertain the whereabouts of a lot of printing paper, shipped to us from Cincinnati, the receipt of which had been somewhat delayed. It was found snugly ensconced in the Warehouse at Joliet, where, together with about *one thousand tons* of miscellaneous merchandise, it was awaiting its turn for shipment. So great has been the influx of business, and the demand for cars on this road, that we are assured by Mr Richards, the gentlemanly agent at Chicago, that 1000 cars could be kept constantly employed. Efforts have been made in several quarters to purchase, or procure the loan, of two or three hundred cars, without success, and consequently the company are compelled to do the best they can with what they have on hand. It is hoped that by increasing the number as fast as possible at the factory, enough will soon be obtained to meet the demand, when all will go on smoothly again.—*Alton Tel.*

☞ We notice that six spans of the railroad bridge at this place are nearly completed, and the other four may be finished in a short time. If suitable timber could have been readily obtained, the frame work of the whole bridge could have been completed and ready for raising so soon as all the piers are finished—the last one of which will be done by the 15th proximo. The entire bridge will be completed, the grading between this and Knoxville finished, and the rails laid by the time the E. T. & Va. road is ready to meet them at Knoxville. The iron for the work has been and is arriving at Savannah, and will soon be here, when the track-laying will be commenced. —*The Press, London.*

Paducah Railroad.

The Branch of the Mobile and Ohio railroad leading into Paducah, is sixty miles long; of this there is forty per cent. of the work completed, leaving sixty per cent. yet to be done. Ten miles are ready for the ties and rails, and three miles of the track have been laid, and are now in use. There is iron enough at Paducah and New Orleans, awaiting shipments, to complete the road fifteen miles; and a locomotive, cars, &c., will be put upon the track in a few weeks, or as soon as they can be brought up the river.

☞ A double track is now being extended on trussel work, from the Depot to the river at this place, in addition to the inclined plane already in use. The object is to tranship through freights immediately from the boats into the cars without passing through the Depot, and *vice versa*. The freights will be raised or lowered by steam power. This is a permanent improvement, and will be very convenient for transferring all kinds of heavy freights, and especially the vast amount of *Marble* from the quarries in Hawkins county, intended for the National Washington Monument at Washington City, that will soon be ready for shipment *via* this place.—*Free Press, London.*

OHIO AND INDIANA RAILROAD.

Another link in the great chain is completed. The last gap in the Ohio and Indiana Railroad was closed on Monday last. A railroad of unbroken guage is now complete from Pittsburgh, Pennsylvania, through the great State of Ohio to Fort Wayne, Indiana, 318 miles. A continuous line is now completed from Philadelphia to Fort Wayne, having but a single break at Pittsburgh to cross the Alleghany river. This break will be closed by a bridge the coming summer, and freight can then be transported 700 miles without transhipment.

The business of the O. and I. R. R is already increasing to an almost incredible extent. Three passenger trains now pass each way daily, and what is of far more importance, they are always full. The freight has increased to the utmost capacity of the road, but the addition of three new locomotives this week will relieve the pressure for a time. Push along, keep moving. Chicago next. —*Bucyrus Journal.*

The Naugatuck Railroad.

The Naugatuck railroad company have appointed their directors and Mr. Heaton of New Haven a committee to investigate the subject of the over issue of their stock by Robert Schuyler, and to settle the claims of the holders by compromise or otherwise at their discretion. The over issue was 317 shares, and the Bridgeport Standard says it is understood that a part of this was pledged (with genuine stock) at 75 cents on the dollar, and it is doubtful whether a portion of the false stock can be identified.—*Hartford Times.*

☞ The election for Directors of the Cincinnati and Portsmouth Railroad Company, was held at Felicity on last Thursday. The following gentlemen were elected, viz.: A. B. Coleman, T. H. Whetstone, David Gibson, George Gregg, Joseph Parish, David Barr, D. W. C. Loudon. The Board organized by the election of T. H. Whetstone, president, Joseph Parish, treasurer, D. W. Loudon, secretary.—*Clermont Courier, Nov. 2.*

The Mobile and Ohio Railroad is progressing satisfactorily. The cars are now running one hundred miles, and by the first of January will reach Enterprise, one hundred and twenty miles from Mobile. It is expected that eighty thousand bales of cotton will be brought down the road this winter, besides large quantities of pitch, turpentine, lumber, &c.—*Charleston Mercury.*

S. M & P. R. R.—The stockholders of Springfield, Mt. Vernon and Pittsburgh Railroad met in this place, on Tuesday last, for the purpose of devising ways and means to relieve the company from its present liabilities and to complete the road.—*Delaware Dem. Standard, Nov. 2.*

Progress of the Virginia and Tennessee Railroad.—The Petersburg Intelligencer learns that this road is now finished to Mack's Meadow, nine miles east of Wytheville, and the cars carried passengers to and from that point on Monday The track is laid to within a mile and a half of the South-western Turnpike, at a point three miles from Wytheville; and that distance is expected to be finished during the present week. If there is no delay from the want of iron, it cannot be more than a week or two before there will be an uninterrupted communication by Railroad between Petersburgh and the village of Wytheville.

The Central Ohio Railroad Open.

We inadvertently omitted to mention, yesterday, that the track of the Central Ohio Railroad has been laid, and that the road is now open between Columbus and the Ohio river. Superintendent Fulton came through with the locomotive *Mastodon*, on Saturday evening last, and represents the track as smooth and in as good order as could be expected.

We understand that it is contemplated to run an excursion train through to-morrow, but are not advised as to particulars. On Monday next the first regular train will commence running, and continue without interruption, unless some unforeseen cause should prevent.

We congratulate the Company and the friends of this important work on its final completion and flattering prospects. We know of no road in the country with a fairer future than this; and we trust, as we believe, that the fondest hopes of its warmest and most sanguine friends will be fully realized. By its opening, the rich and populous territory along its route is accommodated with all the advantages of an eastern market, while a short and easy means of transit is afforded between the seaboard and the Great West.—*Zanesville Courier. Oct. 31.*

Ohio and Pennsylvania Railroad.—The business on this road is larger than at any former time, the freight business especially. All the engines and cars that the Company have, are in constant use, and the trains never stop running, except on Sunday. As fast as the cars can be unloaded in Alleghany city they are immediately sent back; and great inconvenience is suffered by the Company for want of sufficient track room and station accommodation. More are now being provided, and the men in the Company's service work day and night. The loaded trains arriving on one evening formed a line nearly half a mile long. The freight engines on the road, built by Niles, of Cincinnati, are capable of hauling over it thirty loaded cars, each of the capacity of nine tons. In some instances freight sent by railroad from Cincinnati and intended for Pittsburg has been carried to Cleveland or Sandusky city, for which the Ohio and Pennsylvania railroad Company is in no respect to blame, such freight having never been delivered to its agents. Its road terminates at Crestline, and great pains are taken not to delay freight on the Company's side tracks at that point. Additional facilities are being provided, and, after the river rises, there is no doubt that less freight will be offered for transportation than can be readily carried on the road. —*Pittsburgh Gazette.*

Another Movement.—The cars on the Richmond and Danville railroad made another advance to the station beyond Clover Depot, on last Tuesday. Thus the work is coming surely on towards its terminus in this town. We are now within twelve hours' travel of the city of Richmond, while a few years ago the trip was the work of almost as many days. —*Journal, Jonesborough, Tenn.*

Miscellaneous.

The Copper Business in England.

All information connected with the copper business in other countries is important here, and the trado in England more particularly deserves our attention, from the fact that in that country ores yielding 7 per cent. or less of pure metal, are made to return handsome profits to those engaged in their production.

A long experience in tho different processes adopted to render these ores, which are so poor as compared with ours, available, has secured for the English operator an enviable pre-eminence in this, as in other branches of the metal business, and the system and exactitude to which all operations, from the first breaking of ground till the final sale of the refined metal, have been reduced, are not the least important elements in achieving this success.

The ores, as is known, are disposed of to smelters, by a kind of auction, called ticketings, where, the richness of each parcel of ore having been previously ascertained, each smelter present at the sale can at once tell what price it would suit him to pay for the ore, and the competition naturally excited by the bids of other smelters, secures for the mining company the highest prices for their produce.

The principal sales of foreign ores take place at Swansea, which is the grand focus of the smelting business, owing to the abundance and cheapness of fuel and other necessaries, together with the convenience of shipment; and the amount of ores sold there may be judged by the following returns for the quarter ending in September, 1854:

	Tons.	Amount realized
Foreign mines	6761	$520,392 00
Irish mines	3612	193,633 75
Wales, Devon, &c.	117	5,340 37
Slags	431	7,044 37
Total	10,921	$726,410 50

Besides the sales at this point, at various places in Cornwall also, regular ticketings are held, at which all the ores of this rich copper country are sold. The sales made here for the last quarter were 45,727 tons of ore, realising $1,460,929 75, which will give some idea of the amount of business transacted, and of the immense capital that must have been invested before attaining such a development. There is much matter for reflection here to those who are prone to give mining a secondary position in the world's industry.

The Origin of Wire Rope; its Qualities and Economy.

At the British Association, Mr. Andrew Smith, C. E., (who is the patentee of the wire rope,) presented a paper for perusal: the subject was "Wire Rope; its various manipulations and appliances; its commercial value and national economy." Amongst those manufactures to which might be given the appellation of "things of the day," was the invention of wire rope, and so he claimed a few moments of their valuable time. Few manufactures were entitled to more of their consideration than the manufacture of various appliances of wire rope as a substitute for Russian hemp, or converting the metallic produce of the British Islands into a substitute for the vegetable produce of a national enemy and his numerous serfs. It was in the year 1828 that the author of the paper first applied wire rope as a substitute for cat gut, in aid of another invention of his for "Metallic Shutters." The rats had destroyed the strength of the cat gut line by eating it; the position of the sheave or pulley was so placed and made so narrow in the groove, that none but a small substance could be applied to that particular case. Necessity, after all, was the mother of this invention. Time rolled on, and the author anxiously watched the working of this experimental metallic chord; four years were spent in experimenting, in order to test its strength in comparison with hempen rope and chain, as regarded weight, size, strength, price, durability, and economy. This required time, patience, and a heavy outlay of capital. On the 12th January, 1835, the first patent was obtained by Mr. Smith, and in 1839 he had obtained his fourth patent. At this time the wire rope had been applied to a great many purposes, but more particularly for the standing rigging of ships, both in her Majesty's Navy and in the merchant service, In the year 1841 other makers came into the field, and the manufacture has increased much since that time in various profitable appliances, from the working of timepieces to the working of intelligence through the agency of the submarine telegraph wire rope cable. He exhibited two specimens, which, he said, formed the subject of his fifth and last patent for machinery for manufacturing submarine cables and wire ropes generally. In practice they were found efficient in their operations, producing great facility in the manufacture, with very little friction in the rubbing and bearing parts A tabular scale which he produced showed, he said, the utility and economy of wire rope as applied for standing rigging in her Majesty's Navy; from this it also appeared that at the time the estimate was made a saving might be effected of £28,582 on £114,330, being more than one fourth. This was at a time when the price of hemp was less than half its present price, it being then only £40 per ton, whilst it was now nearly £90, and the rope was then nearly half as dear again as at the present time, it being then £60 per ton, and now £40. Mr. Smith concluded by exhibiting and describing two models, one showing the applicability of the wire rope for standing rigging, and the other for mining purposes—*New York Mercantile Journal.*

Important Decision.—On Saturday, Judge McLean gave a decision in the Bank tax cases that will be regarded of interest to the tax payers as well as the Banks. Several of the Banks had procured injunctions against the County Treasurers, restraining them from proceeding to collect the taxes, as levied by the tax laws of 1851 and '52 It was moved to dissolve these injunctions in the cases against the Cuyahoga County Treasurer; and, after consideration, Judge McLean overruled the motion, and made the injunctions perpetual.

He decides that the tax laws of 1851 and '52 are unconstitutional and void.—*State Journal, Nov. 1.*

Evansville and its Coal Prospects.

We had the pleasure, a few days since, of visiting the prospective coal mine, which we have reason to believe will, through the efforts of our enterprising friend, Mr Kersteman, soon be opened into practical use, and realize to our citizens the important fact of having a practical, working, and profitable coal mine right at our doors.

Mr. Kersteman is now engaged in sinking a tremendous shaft, about one mile below the city, from which he confidently expects, within the space of a few months, to mine and deliver coal in unlimited quantities, and of the very best quality West of the mountains. Mr. K. founds his hopes upon experimental boring, made during the past season, the result of which proved in the highest degree satisfactory, and confirmed the belief of some of the most scientific men in the country, that large veins of the best qualities of coal lie concealed not far below the bed of the Ohio, and are easily accessible, and can be rendered immensely valuable.

With the assurance of these actual experiments, Mr. K. is now prosecuting the work of sinking a large shaft, 7 by 15 feet, upon which he employs three setts of men, and drives it vigorously night and day. He has already reached a depth of 60 feet, a large portion of the way through solid rock, and will, with ordinary success, and the aid of his steam engine just put into operation, reach his coal stratum by the first of January next.

The benefit which Evansville will derive from a realization of these prospects, can only be judged by the growth and prosperity, which other towns and cities now enjoy, having risen to an enviable and prosperous condition, with but few of the elements of wealth and greatness that surround Evansville. With the article of coal alone, in abundance and at cheap rates in this city, Evansville may defy the claims of any city in the West, for manufacturing advantages The discovery of coal by Mr Kersteman, will supply the only deficiency wanted to complete our manufacturing facilities, and the day is not far distant when we shall be exporters instead of importers of coal.—*Evansville Journal.*

☞ The real estate owners of Tuscaloosa, at an election recently held in that city, voted that their property should be taxed $20,000 to be taken as stock in the North-Eastern and South-Western Railroad. Four only voted against the measure. The success of this road is now considered as placed beyond doubt, as all those interested in its success are dancing up to the music.—*Selma Reporter, Oct. 26.*

ASSYRIAN DISCOVERIES.

From an account of Assyrian researches and discoveries in the last Annual Report of the Royal Asiatic Society, made by Colonel Rawlinson, we learn that the most recent, as well as the most important discovery, in an historical and geographical point of view, is that of another obelisk, in the south-east corner of the great mound of Nimrod, and erected by Shamasphul, the son of Shalambara. The date of the obelisk is about the beginning of the eight century B. C. The chronology of Assyria has received a valuable accession by the discovery of a record of one of the early kings, whose name is read Tiglath-Pileser, like that of the later king of Assyria known to the Hebrews. Tiglath-Pileser I. is shown to have flourished 418 years before the reign of Sennacherib. From letters more recently received, we learn that Colonel Rawlinson, has read the name of Semiramis on the statue of the god Nebo, dug up from the ruins of the palace of Nimrod. Semiramis appears, in a legend upon the statue, to have been really the wife of Pal, King of Assyria, the same as is mentioned in the Book of Kings—the contemporary of Menahem, King of Israel. This would place Semiramis 150 years before Nebuchadnezzar, which will curiously confirm the tradition recorded by Herodotus—that this queen preceded Nitocris, the wife of Nebuchadnezzar, by five generations, equal to 150 years. A further very curious discovery, made by Colonel Rawlinson is, that the employmeot of the Babylooian cuneiform writing was continued down at least so late as the time of the Macedonian dominion in Asia, the commencement of the third ceotury before Christ,—*Scientific American, November 4th.*

Advantageous Method of Preparing Peroxide of Lead.

A solution of acetate of lead is precipitated by carbonate of soda, and chlorine gas passed into the thin pasty mass thus obtained notill all the carbonate of lead is converted into brown peroxide, which is then filtered and washed. In this manner all the oxide of lead is converted into peroxide, and no chloride of lead is formed: chloride of sodium remains in solution, and acetic acid and carbonic acid are set free. The proportions are: three parts crystalized carbonic soda to four parts of crystallized acetate of lead; it is better, however, to employ a slight excess of the former, in order to make sure of preventing the formation of chloride of lead. From four parts of acetate of lead, 2½ parts of peroxide are obtained, whilst four parts of minium scarcely furnish 1½ part. The peroxide thus prepared instantly becomes white in sulphurous acid gas, and then incandescent. It is especially applicable to this instructive lecture experiment. —F. Wohler: Leibig's *Annalen.*

Monetary and Commercial.

Since our last issue the most striking phases of the money panic have begun to exhibit themselves. The aspect of our Banking interests exhibit nothing but confusion. Confidence is wanting, and monied parties are the sport of the wildest rumors. It will be remembered that some time since, an arrangement was attempted to be effected between our brokers and bankers and the neighboring banks of Ohio and Kentucky, by which currency could be supplied to take the place of the uncurrent notes which were useless for circulation. In consequence of this arrangement, some of those Banks enlarged their circulation to some extent, we cannot say how much or how little. This, unfortunately, was a signal for distrust in some, and there immediately followed a run on banks, and at the present it would seem that every institution must go through the ordeal. The Bank of Circleville has suspended, not failed. Its cashier, H. K. Lawrence, claims for it that it can and will redeem every dollar of its paper that is in circulation, but that the course pursued towards it has compelled it to suspend in order to collect its means. The notes of the Clinton Bank of Columbus were thrown out yesterday. Its officers claim that it is in a sound condition. So also the notes of the Commercial Bank of Kentucky, and those of the Miami Valley Bank of Dayton. This is undoubtedly mainly attributable to panic, but its paralysing effect on the mercantile community is no less fatal. In Cincinnati every thing is chaos. It will take a day or two to ascertain the real position of things. We give them as they are on Wednesday. In consequence of the illness of Mr. Ellis, it was determined not to open the Banking House of Ellis & Sturges to-day. The following was posted on the doors of the Bank: "This Bank cannot be opened to-day. Mr. Ellis is very low with congestion of the brain. Assetts considered good, estimated $1,400,000. Liabilities estimated $1,000,000. Immediate steps will be taken to arrange and settle up the affairs of the house.

ELLIS & STURGES.
Per W. S. Woodward Att'y."

This was followed by a similar course on the part of Smead, Collord & Hughes, of the Citizens' Bank, whose statement we give:

Citizen's Bank.—In consequence of the reported sudden and unexpected death of Mr. Ellis, and the excited feeling in regard to the financial matters in the city, the undersigned feel that it is necessary, for the safety of their depositors, that they should temporarily suspend operations. They can assure every depositor that they are abundantly able to pay every cent which they owe, PRINCIPAL AND INTEREST; and no person shall lose one dollar by them. All they ask is a little time, until the present excitement and stringency shall have passed. A full statement of their liabilities and resources will be made public in a day or two. In the mean time, they ask the favorable indulgence of the public. SMEAD, COLLORD & HUGHES,
Proprietors Citizens' Bank.

Soon after the issue of this statement another more lengthy one followed, in which it was shown that the assetts of the Bank exceeded its liabilities by over $500,000.

S. W. Torrey & Co. had already announced their determination to withdraw, leaving funds to pay their depositors in another institution. These events were followed by a run on T. S. Goodman & Co.; they deemed it prudent to close their doors. The following is their circular:

T. S. Goodman & Co. }
Banking House, Cincinnati Nov 8, 1854. }

The undersigned feel it necessary in consequence of the excited state of the public in regard to financial matters, to suspend for the present. They beg to assure their depositors of their entire solvency, and that no person shall lose either principal or interest by them.

T. S. GOODMAN & CO.

The banking house of John S. Dye was also closed. Notes of the Merchants' Exchange Co. of Memphis, Tenn., have again made their appearance. The troubles occasioned by these notes will be remembered by those interested in monied matters.

In addition to these unfortunate circumstances, it became known that the paying teller of the house of S. W. Torry & Co. had absconded on Tuesday, with a considerable amount of the funds of the bank; this last we regard as a most lamentable affair, involving, as it does, in mortification and shame, his family and friends.

Some of the private bankers wisely concluded to suspend operations for a day or two and see the results, neither receiving deposits nor paying checks, yet keeping their houses of business open. Of the solvency of the houses named above, their statements leave but little doubt, yet their temporary embarrassment is creating a chaos which it will take time to reduce again to elements of order.

Eastern Exchange is abundant and not much purchasing; we quote it dull at ¾al ½ per cent.

In stocks the purchases are light, but former prices are maintained.

Our advices from the East mark no improvement in monetary affairs. An increased irregularity is quoted in some circles, the supply being more abundant in some quarters, and continuing quite as stringent in others. Large rates of interest are paid for loans, where parties are obliged to resort to outside measures for accommodation. Some of the Banks are lending more freely on call this week. There is still, however, a demand for "gilt-edged paper" among the discount houses, at 9@12 per cent.; other varieties range as high as from 12 to 36 per cent. The week ending on Saturday last was undoubtedly the most severe of the season, and the infrequency of mercantile failures is a good indication. The Wall-street Journal says: "The president of one of our largest Banks expresses the opinion that the worst of the present pressure has been experienced, and that the next fifteen days will show a much improved state of things." For ourselves, we do not look for any serious change till natural causes have had time to operate: a storm has been raised, and it will take time to blow over and clear up the wrecks.

Stocks continue to be quoted dull, owing to the continued absence of all speculative and investment demand. Judging from the analogy of last year, however, we may hope for some improvement. After the November payments of 1853 were over, Stocks took a rise, and continued to advance steadily. Time will soon develope whether this will be the case again or no.

The sales of Stock at auction have been as follows:

NORTH CAROLINA IMPROVEMENTS.

Our neighbor, the Old North State, has but recently commenced the race of internal improvements, but is pressing them forward with vigor and energy. The following is the debt of the State, incurred by appropriations and the endorsement of bonds:—

For the Raleigh & Gaston Railroad	$ 800,000
For the Wilmington & Raleigh Railroad	600,000
For the North Carolina Railroad	2,000,000
The Cape Fear and D. River Navigation Company	160,000
The Fayetteville and Western Plank Road	120,000
The Roanoke Navigation Company	50,000
The Cape Fear Navigation Company	65,000
The Neuse River Navigation Company	40,000
The Tar River Navigation Company	25,000
Appropriations for Turnpike Companies in the West	20,000
Bonds endorsed for the Wilmington and Raleigh Railroad	250,000
Total	$4,130,000

And beside this, a large amount of Cherokee Bonds have been lately appropriated by the State in aid of Turnpike Roads in the West.—*Charleston Mercury.*

WESTERN AND ATLANTIC RAILROAD.

From the reports of the superintendent and treasurer of the State Road for the year ending with September, 1854, as published in the Milledgeville Federal Union, we make the following extracts:

The earnings of this road for the year which expired on the 30th ult., are—

From freights	$395,956 31
From passengers	169,335 10
From mails	13,983 20
From sales of materials	1,880 17
Amounting to	$591,154 78
The expenses of working and maintaining the road for the same period, are	$259 455 54
Less various credits	6,413 76
	$253,031 78
Net earnings (42 8-10 per cent. receipts	338,123 00
The amount paid for machinery, cars, and construction, is	324,542 34
Less credit	37 10
	$324,505 24

An exhibit in details, showing the object of these expenditures, classed under appropriate heads, will be found in table A.

Gross earnings, year ending Sept. 30, '53	$478,876 06
" " " " " " '54	591,154 78
Increased earnings	$112,278 72
Expenditures year ending Sept. 30, 1853	$701,177 05
" " " " " 1854	577,537 02
Decreased expenditures	$18.2640 03

Aggregating the excess of earnings with the decreased expenditures, and it will appear that the business of the year just closed has resulted in an increased profit of $235,918 75 over the preceding year.

Terre Haute & Richmond Railroad Earnings.—Through the politeness of Charles Wood, Esq., secretary of this road, we have been furnished with a comparative statement of the earnings of this road during October of this year and last:

Octoher, 1854	$25.643 94
" 1853	16,867 93
Showing an increase of	$8,776 01

This is an increase of 52 per cent. on the earnings of October 1853.

Covington and Lexington Railroad.

Earnings of the Covington and Lexington railroad for October:

Passengers	$8'728 25
Freight	10,406 03
Mail	808 33
Total	$19,042 61

NOTICE TO CONTRACTORS.

PROPOSALS will be received until the 11th day of December next, for the graduation and masonry of fifty miles of the Third Division of the Pacific Railroad (Kansas route) of Missouri, extending from California, Moniteau county, to Georgetown, Pettis county. The work will be divided into sections of about one mile each.

Plans, profiles, and specifications can be seen at the office of the subscribers in St. Louis, and also at the Engineer's office in Jefferson City, on and after the 20th day of November, where all information relative to the work can be obtained.

KIRKWOOD, PORTER & CO.

CHARLES FRODSHAM'S
IMPROVED WATCHES!
BEGGS & SMITH,
JEWELERS,
No. 6 West Fourth St.,
Adjoining the First Presbyterian Church,
CINCINNATI, O.,

HAVE received from Mr. Simon Willard, Boston, Agent for the United States, the sole and exclusive agency for the sale of **CHARLES FRODSHAM'S** NEW SERIES OF IMPROVED CHRONOMETER WATCHES, in the states of Ohio, Indiana, Illinois, Michigan, Iowa, Wisconsin, Missouri, Kentucky and Tennessee.
In the Watches of the New Series, Mr. FRODSHAM has succeeded by a more perfect method of compensation, a more correct adjustment in isochronism, and an entirely new and peculiar construction of the train, by which more power is obtained without increase of size, in producing timekeepers of wonderful and unrivalled accuracy. The great importance of the improved watches is a perfect regularity of time under every variety of climate, motion and position. So perfect are the adjustments, that the most violent exercise, such as horseback riding, jumping, etc., produces on them no sensible effect They are therefore, particularly adapted to Railroad purposes.
Liberty is given to refer to the following gentlemen, who, among many others, have proved the excellence of Charles Frodsham's Watches as timekeepers:

Gen. John S. Tyler		Massachusetts.
John E. Thayer, Esq.		"
Enoch Train	"	"
E. C. Bates,	"	"
F. W. Thayer,	"	"
Wm. Whiting,	"	"
Geo. M. Thacher,	"	"
David Dyer,	"	"
Alvin Adams,	"	"
Billings Briggs,	"	"
D vid Weld,	"	"
Hon. Ebenezer Lane,		Sandusky.
E. F. Osborne, Esq.		Ohio.

The Prices of the New Series Gold Cases, are According to Size, viz:

SIZE 12	
" 14	$230
" 16	
" 18	250
" 20	275
" 22	300

Recommendations:

Boston, Sept. 3, 1853.
The Compensated Lever Watch I purchased of you, made by Charles Frodsham, London, No. 7300, has varied but thirty seconds from mean time in six months, by actual daily comparison with your regulator.
Yours, &c., ALVIN ADAMS.
Mr. Simon Willard.

Boston, Feb. 4, 1854.
Mr. S. Willard Dear Sir—The Frodsham watch, No. 7557, I purchased of you last October, has performed wonderfully well. I have compared it almost daily by your Astronomical clock, and its variations for ninety days is but one second, or a loss of but one-hundredth of a second per day. I consider it better than any Marine Chronometer I ever used.
Yours truly,
FISHER A. NEWELL,
Late master of Sch., Honolulu.

Sandusky, Ohio. Jan. 1, 1854.
Mr. S. Willard, Dear Sir—More than six months ago I purchased of you two of Frodsham's best watches—up to this time, one of them, No. 7571, has altered from mean time but twenty-seven seconds, and the other, No. 7517, but twenty-three seconds in the same period.
Yours, respectfully.
E. F. OSBORNE.
To Mr. Simon Willard.

Gentlemen—On the 1st of April last I procured from Mr Willard, of Boston, one of Frodsham's improved series of watches. It was regulated and set to Cincinnati time. It has not, in that period, been suffered to run down, nor have the hands been moved, and to day it is 20 seconds only slow. Respectfully yours,
HENRY O. AMES,
Sup,t Cin. Ham. & Dayton Railroad.
August 18, 1854.

To Messrs. Beggs & Smith.
The following is an extract from a letter of William Brown, Esq., Springfield, Ohio. engineer on the M. R. & L. E. R. R., who has personally kept the rate of several of Frodsham's watches.
"Finally from what I have known of Frodsham's watches, I am very strongly impressed with the idea, that they are a decided improvement on all other timekeepers, and were they set in gimballs and used with the same care, I think their performance would equal that of Mr. Frodsham's celebrated box chronometer, and would answer the same purpose for determining longitudes."

DENNEY'S DIVIDED CAR AXLE.

PATENTED JANUARY 31ST, 1854.

THE ATTENTION OF RAILROAD COMPANIES is respectfully invited to an examination of the merits of this valuable invention, which offers to add largely to the safety of life and property.

The valuable features of this arrangement of axle are, a saving of full fifty per cent. in motive power on crooked roads: the rails are protected from being destroyed by the flanges of the wheels coming in contact with them on the curves, as is the case with the stiff or rigid axle, which not only destroys the rail but puts a constant strain upon the wheel and axle, causing the wheel on the inner rail to trip or revolve upon the rail under the weight of the car and its load, while the opposite wheel is traversing its greater distance; the tendency of which, is to wear the wheel flat, and cause it, or the axle, to break sooner or later. There is less danger of the car leaving the track from its having become spread.

Axles fitted in this way do not require to be near so large, and yet contain more strength than the common axle, for the reason that the liberty given to the wheels, which allows them to accommodate themselves to the curvatures of the road, removes wholly the strain thrown upon the ordinary axle; and therefore, it requires no more strength of iron at any point between the wheels, than is contained in the bearings, which in the ordinary axle, is not more than one-third of the strength of the other portions of the axle.

The elongated bearing which forms the connection is so proportioned as not to wedge or become tight in the alloy, the wear being almost imperceptible, requiring to be set up not oftener than once in twelve months, by a slight tightning of the screw nuts. If, from long service, the alloy becomes worn out, it can be refilled, making it as perfect as when first filled up, and the gauge of the wheels will never become changed so as to injure the running of the car.

It is after a series of the most careful experiments, conducted through a period of time sufficient to test in the most satisfactory manner, the real merits of divided car axles, and a thorough and practical test in real service of over two years, that we now offer to Railroad Companies one that we are assured will give universal satisfaction in its operations, and both simple and cheap in its construction.

We are now ready to dispose of rights to use the above axle on the following terms: We guarantee full and perfect satisfaction by giving ample time to thoroughly test its merits, and will require no payment to be made until such satisfaction has been given. All applications to be made to

SAMUEL L. DENNEY,
Christiana, Pa.

TYLER DAVIDSON & CO.,

Agents for the

BOSTON BELTING COMPANY

India Rubber Machine Belting in any quantity, from 2 to 20 inches.

India Rubber Steam Packing;

Mixed	do	do	1-32 to ¼ inch thick.
Plain	do	do	1-32 to 1 inch thick.
Pure	do	do	

Pipe and Manhole Rings, all sizes;

Square or Rope Packing, do.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agen of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.

2d, They are a great deal cheaper.

3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations. This is a new and important invention. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the COLDEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils, -10 casks, assorted weights n w in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Leland's Superior C. S. Car and Auger Bitts.—All sizes.

Brass Kettles, and Sheet Brass, &c.—Brass Kettles, assorted from 6 to 30; Sheet Brass assorted from No. 0 to 30; Brass Wire, do do do.

Star Breast Chains.—Four casks of those superior double-linked Chains, just received.

Walker's Trace Chains.—70 casks of those superior goods, warranted full length and sizes, 8 to 20 links, straight and twisted, now in store.

American Anvils.—Eagle brand, faced with with cast steel, and warranted by the manufacturers equal to Armitage's Mousehole.

Plated Spoons.—Plain, tipped, and threaded heavy plate, on best quality of German Silver.

Premium Gimlet Screws.—10,000 gross just received.

Mill Saws. Hoe & Co.'s C. S. Wm. Rowland's, and W. H. Rowland's 6, 6½, 7, 7½, and 8 ft

Cross Cut Saws.—Hoe & Co.'s C. S., Jno ckerell's C. S. and G. S., Wm. Rowland's and W. & H. Rowland's 5, 5½, 6, 6½, 7, 7½, and 8 feet Also, 4 and 4½ feet Tennon Saws.

Axes.—1000 doz. Axes, assorted Yankee and Kentucky patterns, first, second, and third quality

Nails.—4000 kegs Shoenberger's and Wheeling Nails, now in store.

NOTICE TO CONTRACTORS
Mobile and Girard Railroad.

SEALED PROPOSALS will be received by the undersigned at this office, until the first day of December, for the Clearing, Graduation, Track-Laying, together with the building of all Bridges and Culverts of the Western Division of the Mobile and Girard Railroad, extending from Mobile to Greenville, covering a distance of 130 miles.

The work will generally be divided into one mile sections, and bids may be made for one or more of these sections. Separate proposals are desired for the Track-laying, building of Bridges and Culverts, likewise for the building of the Trestle-work, 5½ miles in length, across the Tensas and Mobile Rivers, with the intervening swamps. The trestle-work will be 12 feet high, built upon Black Cypress Piles, found in abundance and adjacent to the line; the two rivers will be crossed with the common Pile Bridging with Truss Pivot Draw in the center of each.

Specifications with the form of the contract and proposals can be had of the undersigned upon application.

Plans, profiles and estimates of that portion of the line are now ready for examination. Parties proposing will please designate it as such upon the envelope.

The country is healthy, with no swamps after leaving the Tensas River. From Mobile to the river, 18.5 miles the grading is light and country very healthy at all seasons of the year. After the line leaves the Tensas River, it passes through, and on the ridge that divides the Alabama and Conecuh waters, easy of access by the Alabama River, and through a section of country well stocked with provisions.

Payments will be made one-third (⅓) in current funds, one-third in the capital stock of the Company, bearing (.08) per cent. interest payable in stock, until the road is completed, then to cease and become common stock of the road, and relying upon the earnings of the same for dividends; the balance (⅓) one-third to be paid in the (.08) per cent. convertible bonds of the Company, maturing in (5) or more years, at the option of the contractors, coupons payable semi-annually either in Columbus, Ga., Mobile, Ala., or at New York, at the option of the holder.

To bidders personally unknown to the undersigned, bond and approved security will be required to an amount not exceeding (¼) the amount of the contract, for the timely and faithful completion of the same.

22½ miles of the road from Girard west, will be open for business the first of November, and 52 miles 9 months therefrom; it is the intention to have the entire line of 245 miles open for business early in 1858.

Sept. 28, 1854-9t. GEO. S. RUNEY.

Baltimore & Ohio Railroad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was opened to the Ohio River in the spring of 1853, and has already established a high character with the business community of the West. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of the country through which it runs, and its many admirable provisions for the expedition, comfort and safety of travelers, it has received such favor as a passenger road, (with its present connections,) as to show that it will become the preferred route for all portions of the West and South-West as soon as its further connections are formed by the completion of the Central Ohio, North-Western Virginia and other Railroads now rapidly finishing.

FOR PASSENGERS BY THIS ROUTE,

Through Tickets from all Parts of the West,

ARE NOW SOLD IN

Cincinnati, Louisville, Madison, Indianapolis, St. Louis, Chicago, Toledo, Detroit, Cleveland, Columbus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED

For Sending Travelers Direct to
WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION

The fullest accommodations are provided. In motive power and Cars, the company has abundant resources, which are being further extended to meet the demands of Western Trade. In the dispatch and regularity of transpart, and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road connects directly in the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,

The numerous Steamers of the Parker Vein Line to New York and Boston, the Ericsson Steamers by Canal to Philadelphia and New York,

And various other Lines of Steamers and Sailing Vessels to the Eastern Ports, and to Richmond, Norfolk, Charleston, Savannah, etc.

J. B. FORD is the Company's Receiving Agent at Wheeling.

Car Wheels of any pattern can he furnished or short notice. Double and single plate and Spoke Wheels of all sizes constantly on hand.

☞ Communications or orders must be addressed to
OLMSTED, TENNYS & PECK,
Jc.9-tf Louisville, Ky.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Resevoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.

The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.

DESCRIPTION OF PLAN.

Fig. 1, of the above cut, represents the foundations, consisting of *Bank* and *Track Walls*, the latter made of cut, the former of hammer-dressed stone, with cut stone coping. The Track is bent of the ordinary T rail, spiked and leaded to the stone track walls. The Center Pier is made of cut stone, with a step for screw and pivot bolted to the same.

Fig. 2, shows the framing.

Fig. 3, is a side view of Main Truss, with the mode of gearing, including the mitre-wheels, iron crank frame, rack and pinion, foundations, pivot wheels and pedestals.

Fig. 4, gives a perspective view of rim, segments, decking, etc.

Fig. 5, is an end view of the main trucks, with pedestals and wheels.

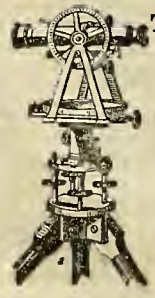

Fig. 6, is a screw for pivot, 6 inches in diameter, working in a steel step through a nut for adjustment.

Fig. 7, shows a cross section of track wall, well, and pedestal.

RAILROAD EARNINGS—THEIR GREAT INCREASE — AND EFFECT ON PUBLIC FINANCES.

In the present era of depreciated railway stocks, there is one great principle of value established by the experience of all mankind, which should be remembered by both buyers and sellers, and *especially by those making investments*. It is this: that the *intrinsic value of property depends upon its intrinsic income, or its capacity to produce such an income.* An annuity, or a ground rent, for example, has as fixed a value as gold; and that is—such a capital as will produce that income at 6 per cent. This is the rule in the great markets of the United States; but the rate is much less in Europe. But there may be property, such as rich lands, which do not produce an actual income, but which have the *capacity* to produce an income; but, in the last case, the value will depend exactly on what is proved to be that *capacity*. Thus, the richest lands in Ohio were worth, fifty years since, only $1.00 per acre, but now they are worth $30 per acre. In the former case, there were neither markets nor roads, and the cultivator, therefore, could make no surplus income. In the last case, however, there are both markets and railways, and every acre will produce an income, which can be very nearly estimated. It is *income* then, or the *capacity* to produce income, which gives intrinsic value to property; and it is this *intrinsic income*, or *capacity* for income, which makes the real value of property. This real value, no panics, or humbugs, or eulogies, or voices of panic, or dispraise, can in the least change; and the man who makes an investment, and does not look to that *intrinsic value*, is an irretrievable blockhead.

This is the rule, and the only rule, we wish to apply to the estimation of railway stocks. If a railway either does not produce a positive income equal to 7 per cent, or has not the capacity to produce that for a long series of years, then it is just in that proportion worth less than par. On the other hand, if, like the Little Miami, for example, it produces a permanent income of 10 per cent., it is worth more than any government stocks, annuities, or ground rents on earth.

Let us now see what is the income, and prospects of income, in some of our best known lines in the West, and leading West. We shall give tables of the *increase* of the business of these lines for the last *reported* years, that it may be seen at what rate they are advancing, and also of the annual expenses—

1. OF THE NEW YORK AND ERIE RAILROAD.

From	1851-2.	1852-3.	1853-4.
Passengers..	$1,286,732	$1,601,209	$1,751,795
Freight	1,761,016	2,237,214	3,370,871
Total	$3,047,748	$4,138,423	$5,122,666

We see thus, that the Erie railroad increased its business at the rate of 33 per cent. in 1852–3, and 25 per cent. in 1853–4. The increase in these two years was 66 per cent.; of which 100 per cent. was in freight, and 40 per cent. in passengers. Deducting the expenses of 1851–2 from the receipts, the *nett* gain was $1,510,587. In 1852–3. the *nett* gain was $1,863,327; so that the nett profits of 1852–3 were 20 per cent. greater than in the year previous—so that the increase of business really did produce a large increase of profits, and thus increased the *intrinsic* value of its stock. Let us now give—

2. THE AGGREGATE INCREASE OF SEVERAL ROADS, by the last Reports.

New York & Erie	$4,138,423	$5,122,666
Pennsylvania Central	1,942,827	2,774,889
Baltimore and Ohio	2,033,419	3,300,000
L. Miami (Ohio)	526,746	667,553
Cin. Ham. & Dayton	321,793	463,021
Xenia & Columbus	253,672	314,434
Eaton & Hamilton	34,006	69,855
Terre Haute & Richmond	105,983	177,975
Aggregate	$9,354,829	$12,910,398
Increase.....38 *per cent*		3,555,569

This table is enough to prove, that the *receipts* of the railways are increasing with immense rapidity. There are two questions arise on this statement—whether the *nett* receipts correspond with the gross ! and whether the capital has not increased in proportion to the nett income ?

We have answered the first by giving the specific results of the New York and Erie railroad, decidedly the most expensively worked road in the country. On that road, the increase of *gross* receipts was 33 per cent., and the increase of *nett* receipts 20 per cent, In other words, there were two-thirds as great increase on the *nett* income, as there was on the gross. In the aggregate of roads, we see the gross income was 38 per cent., and we may assume, without the least danger of error, that the *nett* income of all railroads terminating west of the Alleghanies, is now increasing at the rate of 20 per cent. per annum.

The following are the gross and nett receipts of the Little Miami railway for five years with the per centage of increase on each :

Year.	Gross Receipts.	Nett Receipts.
1849	$321,378	$159,023
1850	405,697	223,488
1851	487,815	297,457
1852	526,314	314,670
1853	667,553	252,132

	Gross Increase.	Nett Increase.
1850	25 per cent.	40 per cent.
1851	20 "	34 "
1852	9 "	6 "
1853	27 "	12 "
Total	108 per cent.	120 per cent.

In *five years*, then, we have on this road this extraordinary result, that the *gross* receipts have more than *doubled*, and that the *nett* receipts have increased *more rapidly than the gross !*

Whether we go thence to general or particular examples, it is absolutely proved, that the *nett* receipts of a railway will increase in proportion to the gross receipts.

The next important question is, does the *capital* increase at a corresponding ratio, or is this gain in *nett* proceeds a gain in positive profit ? We cannot, perhaps, answer this question better, than by referring to the actual facts in different railways.

The cost and receipts of the New York and Erie railroad for three years, was, or nearly, as follows :

	1851-2.	1853-4	Increase.
Cost	$29,000,000	$35,000,000	20 per cent.
Receipts	3,047,745	5,122,666	66 "

It is evident from this, that even the Eric railroad increases its receipts far beyond the ratio of increase on its capital. But one of the best examples we can give is that of the Little Miami railroad, as follows :

	1849	1853	Increase.
Cost of road	$1,678,602	$3,169,732	90 per cent.
Nett receipts	159,023	352,132	120 "
Nett profit in 1849			9 per cent.
" " 1853			11 "

Here we have conclusive evidence that to *finish and furnish* a railway, its capital must be doubled after it commences running; but that its *nett income is constantly increasing beyond the increase of either capital or expenses.*

This is the result to which every man who looks into the *intrinsic value* of railway stock in the West must arrive. Apply this, now, to the intrinsic value of Little Miami, (which we take as an example.) An 8 per cent. will be admitted, by all capitalists, to be *intrinsically* worth par any where—the income being the test. The Little Miami railway stock was actually worth, in 1849, 112½ per cent.; and in 1854 is actually worth 137½ per cent. Rothschild, if he were here, would not controvert this statement—*intrinsic value* being the test. The stock is actually selling at 7 per cent. below. Now, what does that prove? It proves, either that monied men are seized with a most absurd panic; or that they act in sheer ignorance of the intrinsic value of their investments. Something of both is true. Within three years we shall see a total change in the current, and men wonder at their own stupidity. In the mean time, the immense revenues of the railways is positively sustaining the credit of the country; giving employment to thousands, and furnishing better banks of deposites in their treasurers than those commonly called banks.

TUNNELLING.

We see it stated, that two tunnels, under rivers, are about to be constructed; one by the City of Chicago, under the Chicago river, and the other, under the Ohio, at Jeffersonville, by the Fort Wayne S. R. R. Co. The former, we presume, is a small one, as the Chicago river cannot be large; but the one under the Ohio is a great undertaking, and, we opine, will not be done in a hurry. We should advise all persons having due respect to their purses, and to human patience, to let tunnelling the Ohio alone, till some one else has performed that feat. The bed of the Ohio river is either lime-stone rock, or gravel; and, in either case, will furnish difficulty enough for any engineer, and cost enough for any company. And, when done, what is the use of it? For freight cars, the power of moving on without change is important; but, for common business and passengers, a good steam ferry is preferable to a tunnel.

THE INCREASE OF PASSENGER TRAFFIC ON RAILWAYS.

One of the most singular things connected with railways is the increase of passenger traffic, and the *creation* of new business. It appears, from the returns of the British railways, that while the number of miles in use has remained nearly the same, the number of passengers has increased very rapidly. The returns for passengers, in the last three years, were as follows:

In 1851.....78,969,622
In 1852.....86,958,997—10 per cent. incr.
In 1853.....94,966,440—9 per cent. incr.

At this rate, the entire passenger traffic will double in less than ten years; and that in a country where everything is fixed and population increases slowly.

In the United States the entire traffic of railways *doubles in seven years;* and, as the expenses do not increase in the same proportion, the proprietors of railway stock have the certainty that *their property is rapidly increasing in real value, in spite of vicissitudes or fluctuations in the money market.*

BLACKBAND IRON ORE.

Among the many interesting geological developments which are daily proceeding around us, there is none that will be to Ohio of greater practical importance than the certainty, that among her richest coal fields, this ore exists in almost exhaustless quantities. What it has been to Airdrie, in Scotland, it must be again to the enterprising of our own state—a source of wealth limited only by the means of its owners to bring it into marketable shape.

But what is the Blackband ore? is asked by many who have mineral lands; and it is frequently answered in the most vague and indefinite manner. For instance, it is said to be an extremely rich ore, which contains but little earthy matter. Now, this is partly right, and partly wrong. We apprehend that the great secret of the whole is the chemical combination which exists in the ore. It is thus described in Ure's dictionary.: "The carbonate of iron, of the coal formation, is the principal ore from which iron is smelted in England and Scotland, and it yields usually from 30 to 33 per cent. of cast metal. We are indebted to Dr. Colquhoun for several elaborate analyses of the sparry irons of the Glasgow coal fields; ores which afford the best qualities of iron made in that district. The richest specimen of the nine which he tried came from the neighborhood of Airdrie; it had a specific gravity of 3.0533, and afforded in 100 parts:

Carbonic acid	35.17
Protoxide of iron	53.03
Lime	3.33
Magnesia	1.77
Silica	1.40
Alumina	0.63
Peroxide of iron	0.23
Carbonaceous or bituminous matter	3.03
Moisture and loss	1.41
	100.00

Its contents in metallic iron are 41.25."

From the above analysis, it will be seen that lime and carbonaceous or bituminous matter enter into the native composition of the ore; that is, they are in juxta-position, chemically speaking, with the carbonate of iron, to which the one is to act as a flux, and the other to produce the heat necessary to reduce it. Now, this chemical juxta-position is one of the adventitious and advantageous circumstances which no human contrivance can supply. To illustrate: the particles of a piece of marble are known to be held together by an attraction which is exerted only at insensible distances, or when the particles are in juxta-position. Now, if this arrangement of the atoms be once disturbed, and the marble reduced to powder, no force that can be applied can put them again close enough to each other for the action of attraction. So in iron ore, when all the limestone and all the fuel have to be placed at sensible distances from the atoms of the iron ore, it requires a greater quantity of both to produce the effect; but in the case of the blackband ore, we have a portion of the lime in juxta-position with the ore, and, consequently, its effect is much greater than it would be if it were in any other position. The amount of limestone necessary for the reduction of other ores, was 20, 25, and 30 cwt.; the amount necessary for the blackband, 6, 7, and 8 cwt. to produce a ton of iron. There is another advantage, also, in this ore; it is reduced by the use of raw coal, or coal not coked, and a hot blast. These two circumstances have increased the products of a furnace from 60 tons a week to 90.

The difference in cost to the manufacturer at the same furnace, is illustrated in the following comparative statements:

At the Clyde iron works, near Glasgow, in 1829, when the combustion was effected by the cold air blast and coke, there were consumed, for smelting—

	Tons.	cwt.	lbs.
3 tons of coke, equivalent to coal	6	13	0
For the blowing engine	1	0	7
Total coal per ton of iron	7	13	7
Limestone	0	10½	0

In 1833, with the hot blast at 612° Fahrenheit, raw coal alone being used for smelting, there were consumed—

	Tons.	cwt.	lbs.
For smelting	2	0	0
For heating the air	0	8	0
For the blowing engine	0	11	2
	2	19	2
Limestone	0	7	0

And this increase in the product and diminution in material consumed is attended with no detriment to the quality of iron produced, which is said to be suitable for the most delicate castings.

Railroads.

LEXINGTON AND DANVILLE RAILROAL.

The Lexington and Danville railroad is one of the most important lines of railway connected with Cincinnati. At Lexington, the Covington and Lexington railway, connecting Cincinnati with the heart of Kentucky, terminates; and at that point any and all railways from the south, southwest, or southeast, must terminate. The Lexington and Danville railroad, therefore, necessarily makes the *connection* between all the southern roads and all the northern roads any where constructed in the valley of the Ohio. We are happy to learn, from the *Ky. Tribune*, that this important work is progressing well. The work is going on slowly, but steadily. Among the structures on this road is the great bridge over the Kentucky river. This is to be a suspension bridge, and the towers and anchorage are nearly completed. A survey is about to be made, by the Memphis and Clarkville company, of a route from Clarkville, *via* Bowlinggreen, to Danville. If this be completed, it will make a direct line between Memphis and Cincinnati, and become one of the best lines in the country.

THE FRANKLIN AND UNION RAILWAY.

This enterprise was begun under favorable circumstances, and we are glad to learn, from the *Dayton Journal*, is yet progressing. The plan of the road was that of a broad guage road from Union, Penn., to Dayton, Ohio. Should the Pennsylvania roads be completed, it will connect, at the east end, with railways leading to New York and Philadelphia. At Dayton it connects with all the railways leading to Cincinnati, Louisville, and St. Louis.

The *Journal* says, that the work was undertaken with a larger cash subscription than any other road; and that, in spite of the financial troubles of the last year, which has

caused the suspension of many roads within the state, yet the Franklin and Union railroad has been slowly, but steadily, going forward. The right of way for the road has been nearly all secured, and upon highly favorable terms; and about one-third of the grading of the entire line has been done, as well as a large amount of the masonry.

THE APPLICATION FOR AN INJUNCTION AGAINST THE BALTIMORE AND OHIO R. R.

This case is attracting a good deal of attention, and, as a matter of interest, we give the main points claimed in the case. The city of Wheeling claims an injunction, on the following grounds:

1st. That this act of the Baltimore and Ohio railroad is in violation of their charter passed by the Legislature of Virginia in March 1847.

2d. That it is in fraud and violation of the contract of July 6th, 1847, between the city of Wheeling and the Baltimore and Ohio railroad.

3d. That said work is an obstruction to the navigation of the Ohio river, whereby the business and trade of the city of Wheeling are injured.

The bill contains sundry other charges of violation of the charter, by the company, and particularly their illegal loan to the Central Ohio railroad: that the city of Wheeling is a stockholder, and has a right to prevent all illegal acts of the company tending to pervert the funds of the company from their legal destination.

Judge Kennon, for the defense, claims that the law of March, 1847, and the contract of July 6, 1847, are identical in their meaning, and that the contract means nothing more or less than the law. As to the obstruction to the navigation of the river, Judge K. claims that the city must allege and prove actual injury, and that of a nature now to be compensated by damages. Mr. Hunter, for the defense, argued that the contract lessened rather than increased the rights of the city; that it was, in fact, a surrender of rights. That the application on the part of the city was ill-judged, as its position as a center of a system of railroads should constitute its defense against injury resulting from the present act of the Baltimore and Ohio railroad company. That under the law the company had the right to make branches and to take up freight and passengers at all points; and that they had not forfeited this right by any subsequent act.

The arguments are said to have been of a very able character, creditable to the gentlemen who delivered them.

LIGHTNER'S PATENT AXLE BOX.

We are indebted to Mr. Sherburne, whose card will be found among our advertisements, for a beautiful model of Lightner's Patent Axle Box. This box affords one of the great desiderata of railroading — simplicity and adaptedness; as far as it can be done, keeping the journal free from dust, and well lubricated with oil. It is stated by superintendents who use them, that cars provided with these boxes run 10,000 miles with a single oiling. We would advise all new roads to look well before providing themselves with axle boxes, as changes are always expensive, and the best is always the cheapest. Mr. Sherburne is also the agent for an Axle Box for *Inside Bearing* cars, which possesses all the advantages of the Lightner Box.

MISSOURI PACIFIC RAILROAD.

We would call the attention of Railroad Contractors to the advertisement of this company in another column. This is one of the progressing and promising roads; and we hope to see it pushed along with the energy that has thus far marked its progress.

LAW OF THE ROAD.—A case came up on Saturday in a New York Court in reference to the rights of railway travelers. Two men got on board the cars at Sing Sing and took seats temporarily vacated by their occupants. Refusing to give them up, they were forcibly removed by the Conductor and Baggagemen. They prosecuted the company for damages for this, but the Court decided them to be in the wrong and brought in a verdict justifying the railroad employees. This principle has been established in New England, and also in Pennsylvania. It is founded on common sense and the plainest ideas of equity and propriety. A traveler, purchasing a ticket and taking his seat in a car, has a property in that seat to the end of the route, just as complete as he has to his state-room on a steamboat.

DEATH OF F. G. GEDGE.

It is our painful duty to chronicle the death of this gentleman, under the most melancholy and distressing circumstances. Mr. Gedge, as President of the Covington and Lexington railroad, has proved himself a man of energy and perseverance; and it is to these sterling elements of his character that this important enterprise is much indebted. It adds to the melancholy interest of this deplorable circumstance, that this monument of his public spirited services was made the instrument of his destruction. As the engine for the express train, on the morning of Nov. 8, was coming from the station to the depot in Covington, Mr. Gedge either fell or threw himself across the track in front of the locomotive. The wheels passed over him, severing his head from his body. There can be no doubt that this melancholy event was the result of derangement of intellect. Of a mental constitution peculiarly and almost morbidly sensitive on the subject of commercial honor and fair standing, he saw himself suddenly overwhelmed by obligations incurred in endorsing for others; and no doubt the fatal act was the result of a dethroned reason.

The funeral services of Mr. Gedge were of an impressive and solemn character; and the day was marked as one of mourning by the whole community.

Banking, &c.

MONEY.

There is, we conceive, even among the shrewd and intelligent, much serious misconception on the subject of money, and what constitutes its real value. Gold and silver are almost universally regarded as the only standards by which we can guage all the transactions of life, and to which we can look for an unchanging and specific value. Now, there is no inherent property, no specific quality in these metals to render them of themselves the standard of all the transactions of life. And moreover, it is not for the possession of them, in an abstract sense, that men generally aspire, being well assured, that when securely locked in the safe they bring no increase, no interest on the investment.

There is also another equally ridiculous notion, which may deserve a passing mention. Some, even among the intelligent, attribute a kind of intrinsic value to what has once served the purpose of currency. They regard the notes of a bank, which may have been closed for years, as still money. We once knew a Comptroller of State who declined, on these grounds, to destroy the cancelled notes of a whole class of institutions, which had ceased to exist years before. It is very evident to the thinking that these notes were worthless, and not only so, but dangerous, for if fraudulently issued, they might deceive the ignorant.

But to return: The currency of the civilized merchant, the shell of the African, and the pearl and ruby of the Persian, all represent—not gold, not silver, for they may be unknown—but the toil and labor of men. It is the time and labor spent in seeking and extracting them that gives to the precious metals their importance and value, and therefore the conventionalism of society has made them the final standard, beyond which there is no appeal. And with this standard, when it can be had, as the representative of our time and produce, we are satisfied; we have no serious fears of its great deterioration in value, or of final loss from its becoming worthless on our hands. But in the event that gold can not be had, either from the scarcity of the precious metals or the increasing wants of trade, or the accumulation of it in the hands of capitalists who withhold it from circulation either through panic or design, or the payment of heavy balances to foreign countries, or any other measure which reduces the amount in circulation, it becomes a serious question, what substitute can we create to supply the necessities of community? A medium of currency we must have, and such a one as will enable us to purchase what we want as we want it. Now, the Bank Note is the only invention thus far that has been found at all

adequate to our necessities ; and so long as the institutions maintain their credit, their notes, for all practical purposes, are as good as gold, and will even supercede it. But if, unfortunately, through the incapacity or misfortune of its officers, the institution loses its east, its notes at onee become a drug, and are worthless for the purposes they were designed to serve. But it is not always to these causes that may be attributed the loss and delay attendant on the suspension of a bank. Suspieion, panic, and distrust in far too many instances, have resulted in a course of action which has only caused loss and ruin. No institution can afford to pledge property to the extent, or even exceeding its circulation, and then in addition, keep dormant in its vaults, gold enough to redeem every dollar of its notes and pay every dollar of its deposits. It cannot be expected, that an individual or a company, can keep open an expensive institution, merely to furnish a safe place of deposite for the merchant, without any gain to the one who renders his property seeure. No, the bank must use its means in safe and profitable investments, in order to pay its expenses and reimburse its owners. But in times of panie and confusion, these things are all forgotten, and there is one grand and headlong rush to the counter of the Teller. Far better would it be, when distrust has really got possession of the community, to aseertain in some certain and reliable way, the true position of affairs in the bank, and not institute the race which is sure to end in embarrassment. Many an institution might now be exerting a useful influence, if only a little reflection had been exercised by those who first distrusted it. But at this season of panic, it would, perhaps, be well to see how well or ill founded is the feeling of alarm which has seized upon the eommunity.

By reference to the 1st number of the Record, it will be seen that the following proportion of bank notes to coin in circulation, existed in the various years enumerated :

Years.	Bank Notes.	Coin.	Proportion.
1816	$87,500,000	$75,000,000	11½ to 1
1830	60,000,000	10,000,000	6 to 1
1836	120,000,000	28,000,000	4⅓ to 1
1853	153,958,358	141,498,899	1.1 to 1

For the present year, the increase of bank notes has been about $30,000,000, while owing to heavy European balanees which were paid in coin, there has been no serious inercase in the amount of coin in the country. The proportron then stands thus :

Year.	Bank Notes.	Coin.	Proportion.
1854	$183,958,358	141,498,899	1 3-10

By comparing this result with that of the former year, it will be seen that the proportion of coin now in circulation, is more favorable in the present year, despite the panic that is now paralysing business, than it ever has been except during 1853.

That we have not enough of either gold or bank notes to supply our immensely increasing wants is undoubtedly true ; and it is also true that we must patiently wait till curtailed expenses, the increasing produce of our mines and restored confidence can give them to us.

Selected Railroad News.

Anthracite Burning Locomotive:—Mr. Leonard Phleger, of Tamaqua, has constructed an improved locomotive for burning anthracite coal, which promises to reduce the expense of railroad transportation very greatly. One of his locomotive Engines, the *Philadelphia Ledger* states, has been running daily between Philadelphia and Havre de Grace, on the Wilmington and Delaware railroad, for over two weeks. It has been attached to the express train, consisting of six or eight passenger cars, and consumes, as we are informed, only ten dollars' worth of coal per day. The wood-burning locomotive which it replaced, consumed $24 worth of wood per day. Phleger's engine has, it is said, fully as much power as the other locomotive, and runs at the same speed. The furnace and boilers of the locomotive do not now show the slightest signs of injury from fire. The above information was derived from the engineer in charge of the locomotive, from whom we also learn that the locomotive has given great satisfaction to all upon the line of the road, who have examined it, and that it also effectually prevents the annoyanee and danger of sparks. These are facts to be verified by the personal examination of those interested in the success of the experiment. If these representations are fully borne out after a sufficient test, the invention is a very important one to railroad companies. The furnaces and boilers of the Phleger locomotive are all built on an entirely new plan, from which the above improveioents result.

Since the above was in type, we have seen a detailed account of this improved locomotive, to which is attached the name of S. Norris, of Philadelphia, and is given from actual view of the performance of the engine. Mr. Norris says :

The cylinders 15 inches diameter, stroke 24 inches, weight 25 tons ; 4 driving wheels, 6 feet diameter, truck wheels, 30 inches diameter ; furnace 44 inches long by 33 inches wide ; boiler contains 657 square feet of fire surface, 125 tubes, 9 feet long by 2 inches diameter. The fire is blown by a fan which is driven by the exhaust steam, and can be used at pleasure while the engine is standing still. The bottom of the furnace is formed by a water bottom with no openiug, which is a great feature in his improvement ; a projecting water way which protects the tubes, (the coal never coming in contact with the tubes) forms an air-chamber, in which the gasses are consumed.

The cylinders are placed midway of the cylindrical part of the boiler. The height of the top of the boiler is only 54 inches from the rail ; in all other engines with a 6 foot wheel, the boiler stands about 8 feet above the rail. The low boiler is of great advantage when running at high speed, as the center of gravity is thrown *below the axle.*

Another advantage in his arrangement is that his exhaust nozzles are open to three inches diameter, which relieves the cylinder in exhaustiug the steam, avoiding the loss of power from the resistance occasioned by small exhaust nozzles, which are usually 1⅞ inches diameter.

The engine is capable of hanling, at a speed of 40 miles per hour, 8 long passenger cars, with 480 passengers.

This same locomotive, the *George Washington*, was tried on the Philadelphia and Baltimore railroad, and was perfectly successful, as I understand from Mr. Phleger.

The trial trips were made between Gray's Ferry and the Susquehaana river ; and in making the round trip to the Susquehanna and back to Gray's Ferry, 125 miles, only consumed 4000 lbs. of coal.

To haul the same load the same distance, it required four cords of wood in the ordinary locomotive.

Four cords of wood,.....$24
4000 lbs. of coal,.. 10

making a difference in favor of coal of $14 in a trip of 125 miles. Now, to take 300 trips in a year, would be a saving of $4,200 a year for each engine. This is conclusive evidence of the advantages, as far as economy is concerned.

This is a desideratum long wished for at the East, where anthracite coal must eventually take the place of every other species of fuel.

Experiments have been tried at various places and by many experienced engineers, but nothing so far until Mr. Phleger's engine, has even warranted the belief that the attempt would be successful. Of the principles of which Mr. Phleger has availed himself, for want of information we cannot say, but sincerely hope for the sake of our eastern roads, that this locomotive may be found to answer all the requirements that may reasonably be expected of an efficient railroad engine.

PEORIA AND BUREAU VALLEY RAILROAD.

It gives us great pleasure to announce that this road is *finished.* Construction trains run to Peoria, and the road will be opened for freight and passengers on next Monday. The new time table is before us, and from it we find that the passenger train is to leave this city at 2 o'clock P. M., and is to arrive at Peoria at 10 in the evening. From Peoria passengers will leave for this city at 7 A. M., and arrive here at fifteen minutes after three in the afternoon. The freight train for Peoria will leave the Rock Island depot at fifteen minutes past three in the afternoon. Arrangements are to be perfected to run a line of steamers to St. Louis, in connection with this road; and, as the worst obstructions to the navigation on the Illinois lie above Peoria, we may expect this will become a favorite route.

Thus another important avenue of commerce has been opened to Chicago. Peoria is one of the most beautiful cities in the state, and most heartily do we rejoice that we have a railroad connection with so desirable a point. It is surrounded by a rich and highly productive country. Its resources are already largely developed, as it has been settled for a considerable number of years. Some of the best agricultural districts in Illinois concentrate their valuable commerce at Peoria. Much of the trade from the towns and counties about Peoria, together, of course, with that of the city itself, has heretofore gone to St. Louis. Now that we have a direct railroad connection in only eight hours, our St. Louis neighbors must be content to supply Peoria merchants simply with groceries and southern fruits.

The distance from this city to Peoria is one hundred and sixty miles. It was expected that this road would have been in operation early in the summer, but circumstances not necessary to detail here, have caused some delay. The difficulties to be overcome would have proved beyond the ability of ordinary men to surmount; but when such men as Messrs. Sheffield & Farnam take hold of an enterprise, *it must go.* To them our city and state owe a debt of gratitude far beyond our time, and which, certainly, would not be at all in accordance with their modesty to express. We believe a celebration is on foot, and when that comes off, "may we be there to see." —*Dem. Press, Chicago.*

Locomotive for Centralia.—A magnificient looking locomotive for the Southern Division of the Central road, arrived here a day or two since. It is destined for Centralia, to assist in pushing on the work of construction at that point; from here it will go to Illinoistown, and thence by the Ohio road to the junction.—*Alton Telegraph.*

DECATUR DEPOT BUILDINGS.

There is not a railroad station in this state, with the exception of Chicago or Cairo, perhaps, which possesses more extensive or substantial depot buildings than our fast growing town. Our citizens may well be proud of them, for they are a valuable addition to Decatur, and an ornament to the whole line of railroad. The depot grounds are a great attraction, and already the favorite spot of old and young folks. Everybody looks with surprise at the changes which have taken place in the course of six months about town. In a few days the large and commodious passenger building will be under roof, and when finished, will present a beautiful appearance, being visible from most every point in town.

In the angle where the Illinois Central and Great Western railroads cross each other, a tower in octagonal form, 20 feet in diameter and 50 feet in height, has grown up, and forms the greatest attraction, giving the whole country around a romantic aspect. From the top, the roads can be seen for many miles. The plans for the building were made by Otto H. Matz, Esq., architect in Chicago, who designed all the buildings on the whole road, and whose knowledge and taste in architecture is too well known to need any recommendation on our part. There is harmony in every particle of the whole, combined with practical arrangement and convenience. The lower part of the tower contains a large baggage room, the upper part the superintendent's office, provided with an iron balcony in front; above it there is another third story for sleeping room and store room.

Two wings, extending 70 feet on one side, and 60 feet on the other, are to take up the ladies' and gentlemen's rooms, ticket office, dining room, kitchen, pantry, etc. A spacious passage inside in the rear of the tower, connects the two wings, and from here the main stairs bear into the upper story, which is divided into 17 apartments and bed rooms, partly to be occupied by the officers in employ. The brick walls are well laid up, and all the openings provided with elegant cast iron caps and sills, beautifully ornamented, and strong enough to last forever. At a distance, the building appears very much like a small castle in the Norman style, a style well adapted to the purpose, and truly executed by the architect.—*Decatur Gaz.*

☞ The laytng of the track on the Alabama and Tennessee River railroad, beyond Montevallo commoneed Monday last, and will bo pushed forward, wo understand, as long as the present supbly of iron holds out, whieh will carry tho road to Columbiana. We hopo tbe stockholders of the road, who will meet at Shelby Springs, on the 18th inst., will make such arrangements, as will carry tho road, not only to tho Coosa River, but to the 100 mile station. There it will begin to pay, and will provo advantageous to this plaee, tho stockholders, and all those interested in its suecess.—*Selma Reporter.*

Mississippi & Missouri R. R.—Wo understand that tho iron for the above road will begin to come over next week, that the construetion ears will soon follow and the work of putting down tho iron, which is to connect the Mississippi and Missouri rivers, tben commenee.—*Davenport Gazette.*

Steubenville and Indiana Railroad.—The cars on this road are now running regularly between Steubenville and Preston, near Dresden. The train consisting of five cars, runs well filled daily.—*Zanesville Courier.*

E. & C. RAILROAD.

In a very brief time, this road will be completed to Terro Haute. There remain but a few miles yet unfinished, Mr. Griswold, the president, is pushing on the work with even more than his usual energy. By the close of this month, with any kind of good working weather, we shall be united to tho beautiful Wabash City, Terre Haute. The Terre Haute Journal of last week says:

The progress of the work on this road, between this point and Evansville, during the past few weeks has been most rapid, it being now completed as far south as Sullivan upon this end, and Carlisle upon the south end. Thero is now but some ten or twelve miles between the above mentioned points, uneompleted. Arrangements have been made to run a hack line to make the eonneetion, until the entire eompletion of the road shall have been effected. This is a good arrangement, and will be duly appreeiated by the travelling public. By tho same energy which has been heretofore displayed upon the work, its completion will be effeeted by the first of Deeember. Push it aloug.

The Sullivan Democrat of last Saturday says:

The work of laying the iron on the traek of this road is fast approaebing eompletion. On this end of the route, the workmen are to reach the depot at this town during this forenoon. They have "rushed matters through" with eommendable alaerity; last Tuesday, we understood, full three-quarters of a mile was laid. The eorps eoming up is reported to be within a mile or so of Carlisle and eonseqently there is a gap of about a dozen miles in the whole ehain, to be laid. It is asserted by the bridge eontraetors that their work will all be done in time for the traeklayers. The workmen will in all probability, meet iu about ten days, when passenger ears will be immediately put on.—Hurrah for a through trip in two weeks! Hurrah for a daily mail!—*Journal, Evansville.*

Memphis and Little Rock Railroad.—The eontraetors for building the road from this city to Little Rock, during the past week, have placed this end of the line, from the Mississippi to Fifteen Mile Bayou, under eontraet, and workmen are already strung out along tho line over the whole fifteen miles, eutting out the timber and grading the road bed. Beyond that point, the experimental lines have not been eompleted so as to determine the best loeation, but will be, probably, in the next two or three weeks. As soon as Mr. Ford ean make the location, another seetion will be put into the hands of the workmen, a large number of whom are here waiting for it to be made ready for them.

The contraets already mado, provide for the completion of the different seetions before the 1st day of February next, and unless the weather prevents they will be done. The aetive exertions now being made by the eitizens of Memphis, to inerease the availablo means of the eompany, it is eonfidently believed, will be so far sueeessful, as to enablo the contractors to place the whole of the first division, extending to the St. Franeis river, in the course of construction within a very few days, and also to contraet for the delivery of tho neeessary eross-ties for tho traek, and with that impression one of them expeets to start to New York immediately, to purehase the iron rails for at least forty milos of road.—*Enquirer, Memphis.*

Illinois Central Railroad.—The last rail on the above road, conneeting Chicago with Galena, has been laid down, and on Monday next the first train of cars will pass over tho road. A long time has this road been in construction, and we ean readily fancy the joy of the Galenians at its eompletion. They ought to make a publie demonstration of their happiness.—*Davenport Gaz.*

☞ The Reading (Pa.) Steam Forge, is making hollow axles for railroad ears, the first ever turned on the continent. They havo been scientifically tested and aro not liable to fracture; can maintain more weight and last longer than tbe solid axle.—*Cleveland Herald.*

THE SAUT CANAL.

This great work is hurrying on to eompletion, and it is thought that water will be let into the locks on the 15th inst. The Commissioner appointed by the Governor of Miehigan to superintend the work, has been notified by Mr. Brooks, the indomitable contraetor, to be present on the 20th inst., to judge of and aeeept the work, if found in fulfillment of the eontract. Thus is this almost hereulean project brought to a sueeessful aecomplishment, and, in a few days more, the navigable waters of the "Father of Lakes" are to link hands with Huron through the great ehannel eut by the skill and energy of man. Well may we exclaim, with the Detroit *Inquirer*, in view of this prospeetive opening, "how glorious will be the prospeet to behold tho steamers, propellers and shipping of Oswego, Ogdensburg, Buffalo, Cleveland, Sandusky, Detroit and Chieago, proudly steaming the waves of Lake Superior, with no natural obstaele lying in their eourse between the Falls of St. Anthony and the harbors of England, Seotland and France! A well bestowed beneficenee and thorough energy have done that which, to the early navigators of the Hudson's Bay Company, and to the Catholie missionaries of two centuries baek, if told to them, would have been regarded by them as "a tale told by an idiot,"—and whieh now almost ehallenges belief."

To philosophise for the future in store for the Lake Commeree were vain. It is, undoubtedly, to undergo vast and progressive ehanges; for, when vessels lay at our doeks, loaded in the far North with all the eommodities of that rich mineral region, it may be supposed a new era will be inaugurated in our eommereial prosperity. Our eity must beeome the depot for the busiuess between the South and the Superior country, situated, as we are, at the point on the Lake nearest Cineinnati and Louisville. We must beeome prominent agents in the transaetion of that eommeree: Here will supplies be laid in—grain shipped—pork and beef paeked: Here will be reeeived, in return, the incomparably rieh peltries and furs—the iron and eopper of that region, to be re-shipped into the interior, or to be wrought into manufaetured artieles by our own handicraft: Here must gather the eapital and men to transaet this trade; and thus shall Sandusky harbor find its spaeious doeks, its wide and deep waters, alive with a eommeree whieh, hitherto, bas remained shut to the world.

This is no picture, inspired by the Indian Summer without; but sueh a pieture as we shall see embodied in reality if Sandusky businoss men are awakened to the importanee of an early effort in diverting the just opening commerce into this channel.—*Com. Reg., Sandusky.*

Nova Scotia Railroad.—The Halifax *Journal* says that two first class railway ears were landed from the barque Blaek Swan at that port from Boston, on the 9th inst. They are beautifully fitted up inside with every aeeommodation, and will earry sixty passengers each.—There is a tangible proof about our railroad, (adds the *Journal,*) that we feel pleased with.—There is enough iron to complete four miles, and as soon as the spikes arrive, that much will he put down without delay.—*State of Maine.*

Meteorie Illumination.—The most brilliant spectaele in tbe line of meteors ever witnessed in these parts, oeeurred on Friday night last at about 11 o'clock in the North by West. The are described was extended, and such was the brilliancy displayed that manuseript might have been read by its light. It shot up like ligbtning, giving a startling sensation and dimming, for the time being, the stars that might bave been seen in that part of the heavens a few moments previous.—*Adv. Chattanooga, Oct.* 28.

Over-Issue of Stock.—The Vermont Legislature have lately made the over-issue of stoek a eriminal offense, punishable by fine and imprisonment.—*Railroad Advocate, N. Y.*

Miscellaneous.

ATMOSPHERIC TRIP HAMMER.

Our readers are all familiar with the nature and description of the steam hammer, which has so materially modified and simplified the operation of forging heavy work of every description. The grand principle of the steam hammer—the use of a cylinder to modify and increase, or lighten the blow—has been recently applied to the trip hammer, with this difference, that instead of steam to effect the results required in the steam hammer, atmospheric air is made to do all that is necessary in the trip hammer. As in the steam hammer, so in the atmospheric trip hammer, by experience and care the operator is able to strike a blow of several tons, or tap his work as gently as a watchmaker does the delicate structures with which he has to deal. The hammer is fixed at the lower end of a stout, cylindrical rod, which is, in fact, the piston rod of the cylinder. The cylinder above it is strong, closed at the bottom, and open at the top; in this a piston, permanently fastened to the rod, moves air tight; the piston is kept in position by slides above the cylinder; these slides also afford the means of raising the hammer as the cam or tripper is made to operate on them, while its own gravity, and the pressure of the atmosphere, give it a sufficient downward motion.

There are two valves at the bottom of the cylinder, one to let the air out, and the other to let it into the cylinder. These valves are so constructed as to be entirely under the control of the operator. Now, it is evident that the first motion of the piston down the cylinder, if the exhaust valve is allowed to open, will expel the air, and the upward motion will leave a vacuum in the cylinder. At the second descent of the piston, it has not only its gravity, but also the pressure of the atmosphere constantly accelerating its force, so that, under these circumstances, it must strike a heavy blow. Now, if it is desired to use less force, in the descent of the piston, open the valve, which admits air, and the motion of the hammer may be checked or stopped entirely at the will of the operator. This is a simple and beautiful arrangement, and demonstrates how admirably philosophy may be brought to aid the mechanic in his rudest and most toilsome operations, giving strength or nicety to his hands, in obedience to his slightest wish.

Census of Rock Island.—According to a census just completed, the neighboring city of Rock Island contains a population of 5,300. Of this number, 3,152 are white males, 2,138 white females, showing a redundancy in favor of the males of over one thousand! The total colored population is 47. In 1850 Rock Island contained a population of only 1,711.

YALE COLLEGE.

We have received, through the politeness of a friend, the annual catalogue of this time-honored institution. The total number of students is 605. Recent additions have been made to the course of study, rendering it, if possible, more thorough than before. For some years past there has been a department of philosophy and the arts, embracing Chemistry and Civil Engineering. This department, we should judge from the catalogue, is duly appreciated. We are aware that an opinion is very generally entertained that engineering can only be learned in the field. Now, while we are prepared to grant that there are departments in engineering, which, like banking or commerce, require for their successful pursuit, a considerable degree of experience, which can only be obtained by practice; yet, we believe, that the man who enters on the field of practical life with a thorough knowledge of all that the accumulated experience of his predecessors has left recorded for his benefit, is immensely in advance of him who has to begin at the root, and not only learn out-door experience, but gain a knowledge of all the operations of the in-door business of the engineer, mapping, logarithmic computations, and the innumerable calculations of the detail of a survey, together with a thorough knowledge of the construction and use of instruments; and, it may be, somewhat of out-door experience may be better acquired in the retirement of the class-room, with no ulterior object in view, except the fitting for future life, than amid the active duties of the railroad engineer, who is driven to his utmost capacity of endurance to finish his survey in the promised time.

The Fort Smith (Ark) *Herald* publishes an interesting letter from Dr. Shumard, Surgeon and geologist of Captain Marcy's expedition, dated 'In camp, near River Brazos, 40 miles above Fort Belknap, Texas, Aug. 10.'

We learn from it that the expedition, consisting of Captain Marcy, Major Neighbors, Mr. Parker and Dr. Shumard, together with four soldiers and five Delaware Indians, after some severe suffering from heat and thirst succeeded in reaching the head of the Big Wichita, and subsequently the head of the Brazos.

Having reached the head of the Wichita, the party struck off in search of the source of the Brazos. They proceeded due south, and reached the Brazos after traveling about 20 miles. The Doctor says:

The river where he first struck it, runs like the Wichita through high Bluff banks, composed of red clay and gypsum. The water was about four feet deep, and as clear as crystal, but so intensely bitter that even our horses would hardly drink it. After traveling about 30 miles in a northern direction we came to a high hill on the prairie from which we obtained an extensive view of the surrounding country. In a due north direction, at the distance of about 30 miles appeared two mountains, each shaped like a truncated cone, and at least fifteen hundred feet above the level of the surrounding plain. These marked the head of the stream.

From them the head of the stream could be distinctly seen like a cord of silver, meandering through the prairie to the spot on which we stood. Beyond the mountains appeared a line of high bluffs, (the Llano Estaccado) which in the distance, looked like clouds floating upon the horizon. Having now satisfactorily ascertained the source of the river, we decided unanimously to return.

GOLD, AND OTHER MINERALS OF CANADA.

The *Toronto Leader* gives the following statement, based upon the report of Mr. Logan, the geologist, of mineral resources of Canada:

If Canada produces no coal, it has an abundance of the precious metals, and especially gold. Of this fact there is no sort of doubt. At the present moment, perhaps no greater calamity could befal the Province than the visitation of the gold fever. Nevertheless, the infection is here; and however much the fever may disturb the labor market, already submitted to a very violent action, there is no reason to fear that the passion for hunting gold upon the surface and within the bowels of the earth will become as great here as it is in California and Australia. Mr. Logan showed me some ten pounds weight of pure gold, picked from the surface on the River du Loup, some sixty-five miles southeast of Quebec. The only alloy it contains is from eleven to thirteen per cent. of silver. It is therefore found in far too pure a state to be used in the arts, or coined without being alloyed with copper to make it of sufficient hardness. Of the gold in Mr. Logan's possession—which is not his property, however—eight pounds' weight was in a bottle. The pieces were of various sizes, some of them very small, and many of them as large as an English horse bean. But in addition to this bottle of gold, there were several nuggets in a box, one of them weighing over half a pound. It is all surface gold that is in Mr. Logan's possession, having been picked up without the aid of any scientific process. Gold-bearing quartz, however, exists in abundance; but it is Mr. Logan's opinion, that, with unskilled labor, our gold fields cannot be rendered profitable. Mr. Logan has already stated in one of his public reports, that the gold country of Lower Canada extends over three thousand square miles.

He has since discovered, and will state in his next annual report, that it extends over ten thousand square miles. It is proper to state, that the ten pounds' weight of gold in the custody of Mr. Logan, cost as much if not more to obtain it than it is worth. Associated with the gold is found iridium, or white metal, nearly as hard as diamond, used for the points of gold pens. It exists, however, in very insignificant quantities. A rumor has been in circulation that Mr. Logan had some pecuniary interest in our gold regions. Discrediting the statement, I mentioned it to him, and was informed that he had not a farthing's interest in any metal or mine in the country.

In the geological collections are some excellent specimens of slate found in the Eastern Townships. A specimen of French slate, which has been a century in use on the roof of a building, is also in the collection. It is now as good as the day it was first dug out of the bowels of the earth. An analysis of the two kinds shows their composition to be nearly identical.

There are various kinds of Canadian marble in the collection: the handsomest of which is the serpentine. It is found in the Eastern Townships, and is identical with the *verde antique* of Italy.

There are some specimens of soap-stone also found in the Eastern Townships. The soap-stone resists fire, and is for that reason used to line furnaces. It is soft, and can be cut as easily as wood. It possesses great economic value.

The lithographic stone of Canada, of which specimens are in the collection, is of a superior kind. An impression of the Crystal Palace, done in London, on this stone, is very fine.

Monetary and Commercial.

The past week has been noted for the continuance of excitement in financial matters. The developments noticed in our last have been the all-absorbing subjects of thought and action in the community. Financial operations, in consequence, are unsettled, and the usual procedures of business disturbed. The houses of Ellis & Sturges and T. S. Goodman & Co., having both assigned to V. Worthington, Esq., it became a matter of serious discussion among the creditors, and meetings were held, at which it was determined to ask these firms to assume the management of the husiuess for themselves; not from distrust in Mr. Worthington, hut from a settled confidence in the parties, and a helief that an earlier settlement could be obtained. The Citizens' Bank are giving general satisfaction in the course which they pursue. They are receiving checks on themselves in payment of notes which they bold. Another gratifying feature in connection with this institution, is that a placard was posted on one of the windows of the bank, stating that widows having deposits in the bank, would be paid on application at the office of an eminent lawyer. This was promptly responded to, and a number of deposits of this kind were paid.

We regret to be compelled to chrouicle, in addition to our previous misfortunes, the suspension of the firm of Geo. Milne & Co., on Tuesday. This firm is an old and respected one; and, having doue a business intermediate between the too cautious and the extended, it was supposed that they could safely weather the storm. The result shows, that amid general panic, uothing is safe hut the excess of caution.

The published statements of the suspended institutions so far restored a rigbt tone of feeling among those best acquainted in financial matters, that certified checks were sought after, and some private transactions in stocks were effected on this basis.

On Wednesday morning, the Mechanics' and Traders' Branch of the Stato Bank, closed their doors. Nothing as yet is definitely known of its condition. However, whatever may be the fate of depositors, no sacrifice should he made on the bills of this or on the Obio State Stock Banks that have suspended. The following letter, from the State Treasurer, is sufficient guarantee for this:

TREASURY OFFICE, Ohio,
Columbus, Nov. 11, 1854.

W. W. CONES, Esq.—Sir: In answer to your inquiry, I reply that the Notes of the Miami Valley Bank, Savings Bank of Cincinnati, Canal Bank of Cleveland, City Bank of Columbus, and all other Ohio Stock Banks, will be received for Taxes, and all other public dues, at this office, as heretofore. These notes are abundantly secured hy the pledge of Ohio and United States Stocks, in the offices of the Auditor and Treasurer of State; which Stocks are still commanding a premium in New York. No hillholder need necessarily lose anything hy Ohio Stock paper.

Very respectfully, yours, &c.,
J. G. BRESLIN,
Treasurer of State.

In general business, but little is doing; and in the transactions in produce, etc., that have been effected, parties seem rather willing to have the obligations of substantial houses than Bank notes. This is also the case with many who have had small deposits in the banks; so that some capital is thus thrown into business channels which must soon produce a sensible effect.

We have no heavy failures to note; a state of affairs more and more gratifying as the startling events already noted develope themselves.

STOCKS.

In view of the extreme confusion aud disturbance of every financial interest, we have deemed it prudent to suspend for a time the publication of Stock sales. Many transactions bave been made by parties who had engagements of the most pressing nature, and were compelled to sell at rates not equal to one-half the intrinsic value of the Stock. Again, parties who have borrowed on Stock security, freqnently buy in their Stocks at fictitious rates; so that quotations, differing widely, may find their way into the report of the transactions of the same week, each as remote as possible from the true value of the script.

OUR TABLE.

We correct our table of values according to the best information we can obtain, from sourceshere and at the East; but it may be regarded as an invariable rule, that the price that can be obtained is measured almost entirely hy the necessities of the parties who offer. We would not recommend operations based npon any quotations at the present time.

At the East we have advices of but little change. The pressnre continues. and money rates are firm. The banks discount but sparingly, and would much rather contract than increase. The stock of specie does not increase, and so long as this continues, it is not likely that they will discount any more freely than they do now. With regard to the specie drain, which it is hoped will soou he over, the New York Economist says: "The balance will soon bo in favor of New York, with the increase of cotton bills, so far as to check specie shipments, which are already less than at a corresponding period last year."

We notice in the reported failures of our bankinghouses in the New York journals, repeated mention of J. R. Morton & Co., of Cincinnati. This report undoubtedly arose from the circumstance that on the day of the suspension of Ellis & Sturges, and others, this firm, like some others, kept their house open, hnt did no business. However, they are doing their regular business, as usual; and we have had uo intimation of a suspension, or a near approach to it.

Our advices with regard tc Stocks continne to represent the market as dull, and the tendency downwards. With regard to this, the Economist says: "It is not to he wondered at, however, that the rates are lower, when we reflect upon the great depreciation in all property, and the loss of crops, which not only to some exteut prevents former investments, but compels some of them to sell stocks." Lower prices, under these circumstances, may ohtain for a time; but they are no evidence of diminution in the intrinsic value of the stock.

We quote from the sales of A. H. NICOLAY—

$14,000 Illinois and Wis. R. R., 1st mort., '73 (and int.)		25 60
374	Shares Illinois & Wis. R. R.	10 00
30	" New Haven & Northampton	40 00

We select the following from the sales at the New York Stock Board of Nov. 9:

1000	Indiana 5's	82 00
2060	Kentucky 6's	103 00
7000	Virginia 6's	91 00
5500	Ill. Cen. R. R. Bonds	65 37½
5000	New York Cen. R. R. Bonds	84 00
50	Cleveland & Toledo R. R.	58 00
100	Erie R. R.	41 25

TERRE HAUTE & VINCENNES RAILROAD.—We understand the railroad is progressing finely between this place and Vincennes. It is said that passenger cars will soon be placed on both ends of the road—running from Terre Haute to Sullivan, and from Vincennes to Carsile—leaving the distance between Sullivan and Carlsile to be run by a hack.—*Terre Haute Courier.*

RAILROAD EARNINGS.

GREAT WESTERN RAILWAY.

AUDIT OFFICE,
Hamilton, Oct. 28, 1854.

Amount of traffic on the Great Western Railway, for the week ending October 27, 1854:—

Passengers	£7,764 16 0
Freight	2,017 15 9
Sundries	398 15 9¼
Total for the week	£10,181 7 6¼
Amount of previous receipts	79.412 7 11¼
Total receipts since 1st August.	£89.593 15 6
No. of passengers for week	13,477¼
No. of passengers previously	130,050
Total No. of passengers since 1st August	143,527½
No. of miles open	241

—*Montreal Pilot, Nov.* 3.

☞ The earnings of the Cleveland and Pittsburg railroad for October, 1854, are as follows:

For passengers	$24,302 82
Freight, Mails, &c.	29,846 55
	$54,149 37
Receipts for October, 1853:	
Passengers	$22,147 99
Freight, &c.	22,175 30
	$44,323 38
Increase	$9,825 99

—*Cleveland Herald.*

M. I. & P. RAILROAD.—The old Madison road, whose business has been depressed for some months back, is again reviving, and promise as fair show of receipts for the future. The earnings for the last two months have been as follows:

For September	$22,810 00
For October	23,108 95
	$45,918 95

These are the receipts of the Madison road alone, since the injunction which separated it from the Peru road.—*Indianapolis Journal, Nov.* 8.

OHIO & PENNSYLVANIA RAILWAY.—The receipts for October compare as follows:

Receipts in October, 1854	$142,353 88
Receipts in October, 1853	84,070 60
Increase, 70 per cent	$58,283 28
Receipts in 1854, to October 31	$897,268 80
Receipts in 1853, to October 31	529,793 84
Increase, 69 per cent	$367,474 96

This statement shows the earnings of the road, after deducting the sums paid to other companies. The road has earned in ten months nearly the amount of the estimate of the chief engineer for the whole year. The estimate for October was $95,000 to $100,000.

HUDSON RIVER RAILWAY. — The earnings for October show a small gain, as may be seen by the following comparison;

Earnings, October, 1854	$160,642 18
Earnings, October, 1853	153,258 30
Increase	$7,383 88

MICHIGAN SOUTHERN RAILWAY.—The earnings of this road for October are as follows:

From passengers and mail	$224,185 30
From freight and miscellaneous	62,191 78
Total	$286,377 17
Earnings, October, 1853	223,575 96
Increase	$62,801 21

The earnings of this road for the ten months ending October 31, amounted to $1,778,386 51
For the same period, 1853, they were 1,297,179 11

Increase, in 10 months, over 37 p c. $481,207 10
—*Am. Railway Times.*

EARNINGS OF THE CINCINNATI, HAMILTON & DAYTON R. R.—Through the politeness of the superintendent of this road, we are furnished with the comparative earnings of October this year and last.

October, 1854.

Passengers	$24,060 29
Freight	17,885 65
Express, &c.	1,069 68
Total	$43,615 62

October, 1853.

Passengers	$23,725 13
Freight	13,251 54
Express, &c.	1,109 15
Total	$38,085 82
Increase	$5,529 80

This is an increase of 14½ per cent. over the earnings during the corresponding month of last year.

NEW YORK AND NEW HAVEN RAILWAY.—At a meeting of the Stockholders in the New York & New Haven railway company, held at New Haven yesterday, Nov. 8th, it was resolved to repudiate the fraudulent Schuyler stock, and to employ counsel to contest the matter in the courts. A saucy resolution was also passed, inviting the present directors to *resign* their places. It is a hint that most men would "take."—*Hartford Times, Nov.* 11.

MIDDLESEX AND HARTFORD RAILROAD. — The survey of the Middlesex and Hartford railroad has been commenced. The Saybrook Mirror urges the farmers, mechanics, and others interested, "to take hold," and by liberal subscriptions, to put this road through. The route from Old Saybrook to Hartford, on the banks of the Connecticut, through its valley, is a very favorable one; and the road could, if those interested would take hold of it, be speedily put through.—*Hartford Times, Nov.* 11.

GAS.

AUBIN'S PATENT.—We are agents for this new and improved furnace, and having had one in operation at our office for several months past, can confidently recommend it as being simple in its operation, occupying little room and furnishing a pure and beautiful burning gas. From the peculiar arrangement of the retort it is not liable to *burn out*, thus saving a great part of the expensive repairs of other furnaces. We are prepared to erect these furnaces at our own risk and warrant them to produce good gas.

T. WRIGHTSON & CO.,
167 Walnut-st., Cin'ti.

REMOVAL.

The Office of the RAILROAD RECORD has been removed to No. **106** West Fourth St., north side, between Vine and Race streets, in the building occupied by the Cincinnati & Cleveland Short Line, the Cincinnati, Lebanon and Xenia, and the Cincinnati & Dayton Short Line Railroad Companies.

The location is in the very center of Railroad business, and but few steps from the Burnet House. Full files of railroad reports, maps, newspapers and other documents can always be found at this office, and it will afford us great pleasure to give any information, and answer any queries on railroad matters, when in our power. We cordially invite railroad men from the country, when visiting our city, to honor us with a call, and avail themselves of the facilities of our office.

TO RAILROADS AND CONTRACTORS.

HORSE POWERS.—The undersigned being agents for the sale of R. H. Pease formerly Emery & Co.'s Horse Powers, are prepared to furnish them to order. They occupy little room and do their work effectually. T. WRIGHTSON & CO.

NOTICE TO CONTRACTORS.

PROPOSALS will be received until the 11th day of December next, for the graduation and masonry of fifty miles of the Third Division of the Pacific Railroad (Kansas route) of Missouri, extending from California, Moniteau county, to Georgetown, Pettis county. The work will be divided into sections of about one mile each.

Plans, profiles, and specifications can be seen at the office of the subscribers in St. Louis, and also at the Engineer's office in Jefferson City, on and after the 20th day of November, where all information relative to the work can be obtained.

KIRKWOOD, PORTER & CO.
Nov. 9, 1854. 3t

THOS. M CASH,
PHILADELPHIA RAILWAY AGENCY.

New Works on Civil Engineering.

THE Field Practice of Laying out Circular Curves for Railroads. By John C. Trautwine, Civil Engineer.—4th Thousand, in pocket-book form with tucks.

—ALSO—

A New Method of Calculating the Cubic Contents of Excavations and Embankments, by the aid of Tables and 10 Engraved Plates of Diagrams. By John C. Trautwine, C. E.; 2d edition.

Price, one dollar each. Postage on the Curves, five cents; on the Excavations and Embankments, eight cents. For sale by WILLIAM HAMILTON.
Hall of the Franklin Institute.
Sept. 21-3* Philadelphia, Pa.

ENGINEERING!!

The undersigned is prepared to furnish
SPECIFICATIONS, ESTIMATES, AND PLANS,
In general or detail of all kinds of
Steam Vessels, Engines, Boilers, Mill Work, &c
Particular attention given to the superintending of
LOCOMOTIVES, TENDERS, CARS,
And Railway Machinery of every Description,
While under construction.

AGENT FOR THE PURCHASE of, on commission, all articles required for Railroads, Steam Vessels, Locomotives, Engines, Boilers, Machinery, &c.
General Agent for
ASHCROFT'S STEAM GAUGE, ALLEN AND NOYES' METALIC SELF ADJUSTING CONICAL PACKING, DUDGEON'S HYDRAULIC JACK.

Also, for Water Gauges, Indicators, Steam Whistles, &c., &c. CHAS. W. COPELAND,
Consulting Engineer,
c5-tf 64 Broadway, N. Y.

RAILROAD MAP.

WE have now ready A RAILROAD MAP OF THE WEST, containing ALL THE RAILROADS constructing, completed, or proposed in the States of Ohio, Indiana, Illinois, and Kentucky, and portions of Wisconsin, Michigan Pennsylvania, Virginia, Tennessee and Canada, showing the termini, points upon the lines, connections, &c. of each line, all laid down accurately, by a competent hand.

The size of the sheet is 24 by 38 inches, and can be sent by mail.

Price—plain	40 cents.
Colored in outlines	50 cents.
Full colored	75 cents.

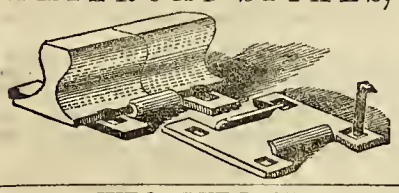
Liberal discounts will be paid to those wishing them in quantities.

Railroad companies desiring a map to illustrate their road cannot find one offering greater inducements as to correctness, &c., or on better terms; as any line can be made prominent, with its connections, &c.

All orders addressed to U. P. JAMES will secure prompt attention

(On Baltimore & Ohio Railroad, midway between Baltimore and the Ohio River.)

MANUFACTURERS of *Engine Lathes, Planing Machines, Drill Presses, Hand Lathes, and other Machinists Tools.* These tools are built in a superior manner, from the very best materials, and are particularly adapted for railroad shops and all others repairing first rate machinery. Our location is very advantageous for shipping work to the West or South. Orders and communications receive prompt attention. Address
nov9-6m. SHRIVER & BROTHERS, *Fulton Works, Cumberland, Maryland.*



Notice.

THE copartnership heretofore existing between tho undersigned, under the firm of Smith & Tyson, is this day dissolved by mutual consent. Either partner is authorized to settle tho business of the concern.
J. HOPKINSON SMITH,
RICHARD W. TYSON,
Baltimore, July 1, '54. No. 25 South Charles st.

CHARLES FRODSHAM'S
IMPROVED WATCHES!
BEGGS & SMITH,
JEWELERS,
No. 6 West Fourth St.,
Adjoining the First Presbyterian Church,
CINCINNATI, O.,

HAVE received from Mr. Simon Willard, Boston, Agent for the United States, the sole and exclusive agency for the sale of CHARLES FRODSHAM'S NEW SERIES OF IMPROVED CHRONOMETER WATCHES, in the states of Ohio, Indiana, Illinois, Michigan, Iowa, Wisconsin, Missouri, Kentucky and Tennessee.
In the Watches of the New Series, Mr. FRODSHAM has succeeded by a more perfect method of compensation, a more correct adjustment in isochronism, and an entirely new and peculiar construction of the train, by which more power is obtained without increase of size, in producing timekeepers of wonderful and unrivalled accuracy. The great importance of the improved watches is a perfect regularity of time under every variety of climate, motion and position. So perfect are the adjustments, that the most violent exercise, such as horseback riding, jumping, etc., produces on them no sensible effect They are therefore, particularly adapted to Railroad purposes.
Liberty is given to refer to the following gentlemen, who, among many others, have proved the excellence of Charles Frodsham's Watches as timekeepers:

Gen. John S. Tyler,	.....	Massachusetts.
John E. Thayer, Esq.	.....	"
Enoch Train	.....	"
E. C. Bates,	.....	"
F. W. Thayer,	.....	"
Wm. Whiting,	.....	"
Geo. M. Thacher,	.....	"
David Dyer,	.....	"
Alvin Adams,	.....	"
Billings Briggs,	.....	"
David Weld,	.....	"
Hon. Ebenezer Lane,	.....	Sandusky.
E. F. Osborne, Esq.	.....	Ohio.

The Prices of the New Series Gold Cases, are According to Size, viz:

SIZE 12	
" 14	$230
" 16	
" 18	250
" 20	275
" 22	300

Recommendations:

Boston, Sept. 3, 1853.
The Compensated Lever Watch I purchased of you, made by Charles Frodsham, London, No. 7300, has varied but thirty seconds from mean time in six months, by actual daily comparison with your regulator.
Yours, &c., ALVIN ADAMS.
Mr. Simon Willard.

Boston, Feb. 4, 1854.
Mr. S. Willard Dear Sir—The Frodsham watch, No. 7557, I purchased of you last October, has performed wonderfully well. I have compared it almost daily by your Astronomical clock, and its variations for ninety days is but one second, or a loss of but one-hundredth of a second per day. I consider it better than any Marine Chronometer I ever used.
Yours truly,
FISHER A. NEWELL,
Late master of Scb., Honoluln.

Sandusky, Ohio. Jan. 1, 1854.
Mr. S. Willard, Dear Sir—More than six months ago I purchased of you two of Frodsham's best watches—up to this time, one of them, No. 7571, has altered from mean time but twenty-seven seconds, and the other, No. 7517, but twenty-three seconds in the same period.
Yours, respectfully.
E. F. OSBORNE.
To Mr. Simon Willard.

Gentlemen—On the 1st of April last I procured from Mr Willard, of Boston, one of Frodsham's improved series of watches. It was regulated and set to Cincinnati time. It has not, in that period, been suffered to run down, nor have the hands been moved, and to day it is 20 seconds only slow. Respectfully yours,
HENRY O. AMES,
Sup,t Cin. Ham. & Dayton Railroad.
August 18, 1854.

To Messrs. Beggs & Smith.
The following is an extract from a letter of William Brown, Esq., Springfield, Ohio, engineer on the M. R. & L. E. R. R., who has personally kept the rate of several of Frodsham's watches.
"Finally from what I have known of Frodsham's watches, I am very strongly impressed with the idea, that they are a decided improvement on all other timekeepers, and were they set in gimballs and used with the same care, I think their performance would equal that of Mr. Frodsham's celebrated box chronometer, and would answer the same purpose for determining longitudes."

DENNEY'S DIVIDED CAR AXLE.

PATENTED JANUARY 31ST, 1854.

THE ATTENTION OF RAILROAD COMPANIES is respectfully invited to an examination of the merits of this valuable invention, which offers to add largely to the safety of life and property.

The valuable features of this arrangement of axle are, a saving of full fifty per cent. in motive power on crooked roads: the rails are protected from being destroyed by the flanges of the wheels coming in contact with them on the curves, as is the case with the stiff or rigid axle, which not only destroys the rail but puts a constant strain upon the wheel and axle, causing the wheel on the inner rail to trip or revolve upon the rail under the weight of the car and its load, while the opposite wheel is traversing its greater distance; the tendency of which, is to wear the wheel flat, and cause it, or the axle, to break sooner or later. There is less danger of the car leaving the track from its having become spread.

Axles fitted in this way do not require to be near so large, and yet contain more strength than the common axle, for the reason that the liberty given to the wheels, which allows them to accommodate themselves to the curvatures of the road, removes wholly the strain thrown upon the ordinary axle; and therefore, it requires no more strength of iron at any point between the wheels, than is contained in the bearings, which in the ordinary axle, is not more than one-third of the strength of the other portions of the axle.

The elongated bearing which forms the connection is so proportioned as not to wedge or become tight in the alloy, the wear being almost imperceptible, requiring to be set up not oftener than once in twelve months, by a slight tightning of the screw nuts. If, from long service, the alloy becomes worn out, it can be refilled, making it as perfect as when first filled up, and the gauge of the wheels will never become changed so as to injure the running of the car.

It is after a series of the most careful experiments, conducted through a period of time sufficient to test in the most satisfactory manner, the real merits of divided car axles, and a thorough and practical test in real service of over two years, that we now offer to Railroad Companies one that we are assured will give universal satisfaction in its operations, and both simple and cheap in its construction.

We are now ready to dispose of rights to use the above axle on the following terms: We guarantee full and perfect satisfaction by giving ample time to thoroughly test its merits, and will require no payment to be made until such satisfaction has been given. All applications to be made to

SAMUEL L. DENNEY,
Christiana, Pa.

TYLER DAVIDSON & CO.,

Agents for the

BOSTON BELTING COMPANY

India Rubber Machine Belting in any quantity, from 2 to 20 inches.

India Rubber Steam Packing;

Mixed	do	do	1-32 to ¼ inch thick.
Plain	do	do	1-32 to 1 inch thick.
Pure	do	do	

Pipe and Manhole Rings, all sizes;

Square or Rope Packing, do.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agen of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.

2d, They are a great deal cheaper.

3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations. This is a new and important invention. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the COLDEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils,—10 casks, assorted weights n w in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Leland's Superior C. S. Car and Auger Bitts.—All sizes.

Brass Kettles, and Sheet Brass, &c.—Brass Kettles, assorted from 6 to 30; Sheet Brass assorted from No. 0 to 30; Brass Wire, do do do.

Star Breast Chains.—Four casks of those superior double-linked Chains, just received.

Walker's Trace Chains.—70 casks of those superior goods, warranted full length and sizes, 8 to 20 links, straight and twisted, now in store.

American Anvils.—Eagle brand, faced with with cast steel, and warranted by the manufacturers equal to Armitage's Mouseholo.

Plated Spoons.—Plain, tipped, and threaded heavy plate, on best quality of German Silver.

Premium Gimlet Screws.—10,000 gross just received.

Mill Saws. Hoe & Co.'s C. S. Wm. Rowland's, and W. H. Rowland's 6, 6½, 7, 7½, and 8 ft

Cross Cut Saws.—Hoe & Co.'s C. S., Jno ckerell's C. S. and G. S., Wm. Rowland's and W. & H. Rowland's 5, 5½, 6, 6½, 7, 7½, and 8 feet Also, 4 and 4½ feet Tennon Saws.

Axes—1000 doz. Axes, assorted Yankee and Kentucky patterns, first, second, and third quality.

Nails.—4000 kegs Shoenberger's and Wheeling Nails, now in store.

For sale by TYLER DAVIDSON & CO.,

NOTICE TO CONTRACTORS
Mobile and Girard Railroad.

SEALED PROPOSALS will be received by the undersigned at this office, until the first day of December, for the Clearing. Graduation, Track-Laying, together with the huilding of all Bridges and Culverts of the Western Division of the Mohile and Girard Railroad, extending from Mohile to Greenvile, covering a distance of 130 miles.

The work will generally he divided into one mile sectlons. and hids may be made for one or more of these sections. Separate proposals are desired for the Track-laying, huilding of Bridges and Culverts, likewise for the huilding of the Trestle-work, 5½ miles in length, across the Tensas and Mohile Rivers, with the intervening swamps. The trestle-work will be 12 feet high, huilt upon Black Cypress Piles, found in abundance and adjacent to the line; the two rivers will he crossed with the common Pile Bridging with Truss Pivot Draw in the center of each.

Specifications with the form of the contract and proposals can he had of the undersigned upon application.

Plans, profiles aud estimates of that portion of the line are now ready for examination. Parties proposing will please designate it as such upon the envelope.

The country is healthy, with no swamps after leaving the Tensas River. From Mobile to the river, 18.5 miles the grading is light and country very healthy at all seasons of the year. After the line leaves the Tensas River, it passes through, and on the ridge that divides the Alahama and Conecuh waters, easy of access by the Alahama River, and through a section of country well stocked with provisions.

Payments will be mado one-third (⅓) in current funds, one-third in tho eapital stock of the Company, hearing (.08) per eent. interest payahle in stock, until the road is completed, then to cease and hecome common stock of the road, and relying upon the earnings of the same for dividends; the halance (⅓) ono-third to he paid in the (.08) per ceut. convertihle honds of tho Company, maturing in (5) or more years, at the option of the contractors, coupons payahle semi-annually either in Columhus, Ga., Mohile, Ala., or at New York, at the option of the holder.

To hidders personally unknown to the undersigned, hond and approved security will he required to an amount not exceeding (¼) the amonnt of the contract, for the timely and faithful completion of the same.

22½ miles of the road from Girard west, will he open for husiness the first of Novemher, and 62 miles 9 months therefrom; it is the intention to have the entire lino of 245 miles open for husiness early in 1858.

Sept. 28, 1854-9t. GEO. S. RUNEY.

Baltimore & Ohio Railroad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was opened to the Ohio River in the spring of 1853, and has already established a high character with the husiness community of the West. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of tho country through which it runs, and its many admirahle provisions for the expedition, comfort and safety of travelers, it has received snch favor as a passenger road, (with its present connections,) as to show that it will become the preferred route for all portions of the West and South-West as soon as its further connections are formed hy the completion of the Central Ohio, North-Western Virginia and other Railroads now rapidly finishing.

FOR PASSENGERS BY THIS ROUTE,

Through Tickets from all Parts of the West,

ARE NOW SOLD IN

Cincinnati, Louisville, Madison, Indianapolis, St. Louis, Chicago, Toledo, Detroit, Cleveland, Columhus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED

For Sending Travelers Direct to
WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION

The fullest accommodations ale provided. In motive power and Cars, the company has ahundant resources, which are heing further extended to meet the demands of Western Trade. In the dispatch and regularity of transpart, and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road connects directly in the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,

The numerous Steamers of the Parker Vein Line to New York and Boston, the Ericsson Steamers by Canal to Philadelphia and New York,

And various other Lines of Steamers and Sailiug Vessels to the Eastern Ports, and to Richmond, Norfolk, Charleston, Savannah, etc.

FOUR DAILY TRAINS.

FIRST TRAIN.—Lightning Express at 6 o'clock A. M., for Cleveland, Dunkirk, Buffalo, Albany, New York and Boston; Crestline, Pittsburgh, Baltimore, Philadelphia, and New York; Zanesville, Wheeling, Baltimore, Philadelphia and New York; Washington City, etc.; Connects to Sandusky, also at Xenia to Springfield.

SECOND TRAIN.—Accommodation Express, at 8 o'clock, A. M., for Cleveland, Dunkirk, Buffalo, Albany, New York, and Boston; Crestline, Pittsburgh; Zanesville, Circleville and Lancaster; Hillsboro'. Connects at Sandusky with steamer BAY CITY, to Detroit.

THIRD TRAIN.—Accommodation, at 3.05 P. M., for Xenia; Circleville and Lancaster; Blanchester and Chilicothe; Hillsboro'.

FOURTH TRAIN.—Night Express, at 5 P. M., for Cleveland, Dunkirk, Buffalo, Albany, New York and Boston; Crestline, Pittsburgh, Philadelphia and New York; connects at Xenia to Springfield.

One Train on SUNDAY, for Columbus, at 2.30 P. M.

FARE AND THROUGH TICKETS.

For prices of fare, through tickkts, and all information, please apply at the company's new office, No. 233 west side of Walnut street, six doors south of the United States Hotel, or at the old-established General Railroad office, in the three-story yellow building, southeast corner of Broadway and Front-street, directly opposite the Spencer House, Railroad Hotel and Mailboat Landing, or at the Eastern (Little Miami) Depot, East Front-street.

P. W. STRADER, Gen'l Agent.

OMNIBUS LINE.

The Omnibus Line calls for passengers at all the principal hotels; and by leaving directions at the office, No. 233 Walnut street, six doors south of the United States Hotel, or at the office southeast corner of Broadway and Front-street, opposite the Spencer House, directly on river bank, they will call in any part of the city.

J. H. HOWELL,
oct. 19. Conductor.

Change of Time on Cincinnati, Hamilton, Eaton & Richmond Railroad.

ON and after TUESDAY, April 4th, 1854, the Morning Train for Richmond and Indianapolis, will leave Depot, foot of Sixth street, at 6.10 o'clock, A. M.

Passengers by this Train connect at Indianapolis with the 1 o'clock, P. M. Train on Lafayette and Indianapolis Railroad for Lafayette and Chicago; arriving at Chicago by 9 o'clock, P. M., of same day, being 9 hours less time than by any other railroad route leaving Cincinnati.

Also, connect at Indianapolis with 1.15 P. M. Train for Terre Haute.

Trains for St. Louis leave Chicago at 11 o'clock P. M., after the arrival of 1 P. M. Train from Indianapolis in the morning, making this the quickest route by far between Cincinnati and St. Louis.

Evening Train will leave as usual, at 3.30 P. M. connecting at Richmond with 7 P. M. Train for Indianapolis; arriving at Indianapolis at 10.30 P. M.

RAILROAD HOTEL.

CINCINNATI, O.

THE GIBSON HOUSE, Cincinnati, is situated on Walnut-street, between Fourth and Fifth, in the immediate neighborhood of all the Railroad Offices. For comfort and convenience it is believed that this hotel is unsurpassed. It is heated with steam from the first floor to the fifth, thus making it the most desirable winter house in the West. The proprietor hopes to enjoy a share of the patronage of Railroad men.

A. WETHERBEE, Proprietor.

Covington and Lexington Railroad.

1854. 1854.

OPEN to Paris.—Direct Railroad connection with Lexington, Frankfort and Louisville.

Two Daily Passenger Trains.

On and after MONDAY Oct. 9th, 1854, and until further notice, Trains will run as follows:

Express Train leaves Covington at 7 o'clock, A. M. stopping at Grant's Bend New Philadelphia, Canton, Benton, Clarkson, Demossville, Butler, Irving, Falmouth, Callenville, Boyd's, Berry's, Robinson's Garnett's Cynthiana, Laird's and Kiser's and arriving at Paris at 11.30 A. M.

Returning, leave Paris at 12 o'clock M., stopping as above, and arriving at Covington at 4.35 P. M.

Through passengers by this train connect directly at Paris with Maysville and Lexington road, and arrive at Lexington at 1 o'clock P. M., connecting at Lexington with the stage lines for Danville, Winchester, etc., and with the afternoon train of the Lexington and Frankfort road, for Frankfort and Louisville.

Returning, leave Lexington at 10 o'clock, A. M., and arrive at Covington at 4.35 P. M., in time for the Evening Express Trains North and East.

The Accommodation Train leaves Paris at 5.30 A. M., stopping at all regular and flag stations and arriving at Covington at 10 25 A. M.

Returning, leave Covington at 2.40 P. M., stopping as above, and arriving at Paris at 7.35 P. M.

Through passengers by this train lie over night at Paris and arrive at Lexington at 8.30 next morning.

Freight Trains leave Covington daily, Sundays excepted, at 2.40 P. M.; freight received up to 12 M., for the train of same day.

RATES OF FARE.

Covington to Lexington	$3 00
Covington to Paris	2 40
Covington to Cynthiana	2 00

FOR THROUGH TICKETS,

Apply at the Cincinnati, Hamilton and Dayton Rail road Ticket Office, W. A. Latham, Agent; Little Miami Railroad Ticket Office, P. W. Strader, Agent; or at the Depot, Coviagton.

J. M. DOUGHERTY,
Superintendent.

☞ The Omnibus Line will call for Passengers in any part of the city, by leaving directions at the above offices. CLAYTON & GRANT.

oct. 17.

Cincinnati, Wilmington and Zanesville Railroad.

OPEN TO LANCASTER.—Two daily Trains, (Sundays excepted) between Lancaster and Cincinnati. On and after Monday, June 26th, 1854, until further notice, trains will run as follows:

The morning Train leaves Lancaster at 5.10 A. M., and arrives at Cincinnati at 11 15. Returning leaves Cincinnati at 3.05 P. M. and arrives at Lancaster at 9.30 P. M

The downward accommodation train leaves Lancaster at 10.05 A. M., and arrives at Cincinnati at 5.40 P. M.

The upward accommodation train leaves Cincinnati at 7.30 A. M., and arrives at Lancaster at 4.00 P. M.

Trains will stop for passengers as follows: At Amanda, Stout's, Circleville, Williamsport, Four Corners, New Holland, Washington, Rattle Snake, Sabina, Cross Roads, Wilmington, Sligo, Clarksville and Morrow; and on the Little Miami Road at Deerfield, Butterworth's, Water Station, Loveland, Miamiville, Milford and Plainville, and on proper signal by flag, or to the Conductor, at Branch Hill and Linwood, at Turnpike.

The downward Trains connect at Morrow with the Trains on the Little Miami Road for Columbus.

Lines of Omnibusses and Packets will run between Circleville and Chillicothe, and Stages and Packets between Lancaster, Logan, Nelsonville, Athens and Pomery; and Stages between Lancaster, Somerset and Zanesville connecting with the morning train from, and evening train to, Cincinnati.

Fare from Cincinnati	to	Washington	$2 50
" "	"	Circleville	3 00
" "	"	Lancaster	3 60
" "	"	Chillicothe	4 00

For other information and Tickets, apply at Ticket office, corner of Broadway and Front sts, and at the Little Miami Depot, or to the Station Agents on the line.

E. W. WOODWARD,
Engineer and Superintendent.

☞ The Omnibus Line will call for and deliver passengers to and from the trains to any part of the City.

J. HOWELL, Conductor.

☞ The Company will not be responsible for baggage exceeding $50 in value, unless the same be returned to the Conductor or Agent, and freight paid at the rate of a passage for every $500 in value above that amount.

KENTUCKY LOCOMOTIVE WORKS.
CORNER OF KENTUCKY AND TENTH STS.
LOUISVILLE, KY.

THE Proprietors of the Kentucky Locomotive Works would respectfully inform Railroad Companies and the public generally that, having completed their establishment, they are now prepared to receive and execute orders with fidelity and dispatch.

They will contract for

Locomotives, Passenger, Baggage, Freight, Gravel and Hand Cars,

Of every style and pattern, as well as all kiods of St and Machinery required for railroads.

Particular attention will be paid to repairing, which they have every facility.

They are also prepared to contract on favorable terms for building all kinds of Machine Tools, such as Turning Engines, Lathes, Planers, Drills, Slotting, Splitting, and Shaping Machines, of every variety of pattern.

Having also a large FOUNDRY connected with the establishment, orders for Castings are solicited, and will be filled with promptness.

Car Wheels of any pattern can be furnished on short notice. Double and single plate and Spoke Wheels of all sizes constantly on hand.

☞ Communications or orders must be addressed to
OLMSTED, TENNYS & PECK,
Je.8-tf Louisville, Ky.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Resevoir is held closo to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.

The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.
WILLIAM SHERBURNE,
PRINCIPAL AGENT,

DESCRIPTION OF PLAN.

Fig. 1, of the above cut, represents the foundations, consisting of *Bank* and *Track Walls*, the latter made of cut, the former of hammer-dressed stone, with cut stone coping. The Track is bent of the ordinary T rail, spiked and leaded to the stone track walls. The Center Pier is made of cut stone, with a step for screw and pivot bolted to the same.

Fig. 2, shows the framing.

Fig. 3, is a side view of Main Truss, with the mode of gearing, including the mitre-wheels, iron crank frame, rack and pinion, foundations, pivot wheels and pedestals.

Fig. 4, gives a perspective view of rim, segments, decking, etc.

Fig. 5, is an end view of the main trucks, with pedestals and wheels.

Fig. 6, is a screw for pivot, 6 inches in diameter, working in a steel step through a nut for adjustment.

Fig. 7, shows a cross section of track wall, well, and pedestal

CINCINNATI:

THURSDAY MORNING,.....NOV. 23, 1854

E. D. MANSFIELD,

May be found at the office of the Railroad *Record*, 106 West Fourth-street, between Vine and Race, (north side) between the hours of 11 A. M. and 1 P. M.

OPENING OF A CONTINUOUS LINE OF RAILWAY, VIA WHEELING, TO BALTIMORE; AND ITS EFFECTS.

The carriage of freight between the valley of the Ohio and the Atlantic states, was carried on prior to 1825, by two waggon routes; one by Wheeling to Baltimore, and the other by Pittsburg to Philadelphia. This mode of transportation was, of course, very slow, and very expensive. A heavy loaded waggon, from Philadelphia, was twenty days making the passage; and from Baltimore about the same. *The whole amount of this cost of time and money was paid by the Western people;* for it enhanced by so much the price of merchandize, and diminished by so much the price of produce at home.

In 1825, the New York and Erie canal was opened. Although there was then only a land carriage over Ohio, it immediately changed the current of transportation, for produce, from the northern part of the valley. The effect on New York city was prodigious. There has been nothing in its whole history which produced anything like its commercial effect. It cast the balance in her favor, the shipment of produce and the importation of merchandize.

A few years after, the Ohio canal completed the second part of this great commercial change. The water communication from the Ohio to New York was complete; and, consequently, the transportation of all kinds of heavy freight was greatly cheapened, both in time and money. Philadelphia followed, at a great distance, with an inferior canal, obstructed by inclined planes over the mountains.

Baltimore, notwithstanding the scheme of the Chesapeake canal, found that she *must* pass the mountains by railway. The railway, the Baltimore and Ohio, was commenced at a much earlier date than those of New York and Philadelphia; but dragged slowly along, not for want of energy, but for want of faith in railways by monied men. Again New York went ahead; and the completion of the Cincinnati, Cleveland, and Columbus line placed New York in advance, as to railways, as she had been as to canals. The great throng of passengers rushed on through Cleveland, Dunkirk, and Buffalo, to New York. Merchandize followed, and already the New York lines of railway are rivalling the New York canal in the transportation of freights.

But we have come to another era, when Baltimore and Philadelphia will again enjoy equal advantages, which they have not done in the last twenty years, by the completion of their railway lines to the heart of the Ohio valley. The first step in this new era, is the completion of the Ohio Central railroad to Wheeling. This makes a COMPLETE CENTRAL LINE OF RAILWAY BETWEEN CINCINNATI AND BALTIMORE—639 miles. The line by Crestline and Pittsburg, to Philadelphia, is 717 miles; and the line by Dunkirk to New York is 858 miles; so that Baltimore has now regained her natural position, *which is nearer to Cincinnati than any great Atlantic city.* What effect will this have on the future commerce of these cities? In an *absolute* sense, neither of these cities can be injured by any railway, canal, or any other public means of inter-communication; for they all improve the country, and take nothing away. But, *relatively*, the effect will be decided. Baltimore, if possessed of a liberal spirit, and an energetic (though discreet) enterprise, may, and must receive great commercial advantages, from her *line of railway through the heart of the country.*

It is too late to say (as was long said), that railways cannot carry heavy freight and compete with canals. There is not a railway depot in Ohio which does not disprove, point blank, all the theories and vain delusions once held on this subject. The railways are covered with freight; and it is this fact which explains the constant demand for double tracks and new machinery. The increase of railway freights is enormous, and the amount will be carried beyond their utmost capacity of movement.

The Baltimore and Ohio railroad was completed to Wheeling in January, 1853, but was not in good working order till the latter part of that year; yet, it may give us some idea of the *effect* of such a work on Baltimore and on the West, by comparing the *movement* of freight on that road in 1851, when completed to Cumberland, with that of 1853, when completed to the Ohio river; thus—

	In 1851.	In 1853.
Flour	471,872 bbls.	666,160 bbls.
Iron	10,956 tons.	7,852 tons.

Coffee	2,329,978 lbs.	7,766,192 lbs.
Sugar	3,792,589 lbs.	4,733,017 "
Dry goods	20,328,131 "	25,718,033 "
Groceries	14,731,313 "	23,778,508 "
Grain	17,330,150 "	23,210,150 "

These are but a portion of the articles, but enough to compare by. The increase in two years, on freight, is 50 per cent.! The increase in 1854, though we have not the returns, is known to be quite as great.

Now, however, we have the completion of the Ohio Central to Wheeling; and it is most obvious that this gives Baltimore a railway inlet *to the entire valley of the Ohio.* The effect of this will undoubtedly be to give Baltimore commercial advantages, in connection with the West, equal to those of New York. In a short time, we shall have, also, the completion of the Cincinnati and Marietta railroad; and also the Hampfield, by which a more direct route will be opened to Philadelphia. The effect of the completion of all these great railways will be to give the valley of the Ohio new facilities for the transportation of its produce, and to equalize the advantages of the great Atlantic cities.

The transportation of both freight and passengers will be reduced to a minimum; and the prices of products be equalized over the whole country. This will be an immense advantage to the farmers, in all parts of the West, and will increase the *annual income* of the states in the valley of the Ohio by the *whole difference made by the reduced cost of moving its products.* This effect has already been produced to a great extent, by the completion of the New York and Pennsylvania lines; but will be yet greater, when all our eastern lines are finished.

In the completion of the Ohio Central road, we must not forget, that it lies on the *old route* to the Atlantic, which unquestionably gives it an advantage, and a return to which will be natural and pleasing. At any rate, to the central counties of Ohio, the completion of this work is a great benefit.

RAILROADS AND MINERAL LANDS.

Where should railroads first be built—at all times a serious question, now amid monetary difficulties and shattered public confidence, is one of intense and absorbing interest.

During the past year, many a scheme has been started; surveys made and roads located; stock subscribed and money spent; but now, nothing is more evident than that some must wait for a settling down of the chaotic elements of financial confusion. Which, then, are the most important, and which shall first be built?

It is very common to suppose that a railroad must depend for its support chiefly on the through travel and freight, and secondarily on the agricultural productions of the regions which it traverses; and consequently, hardly a road is projected that has not some pre-eminent claim to the *entire* traffic between North and South, East and West. It is evident that all these rival claims cannot be supported by the through travel; and therefore, that many of them must depend on local business. Experience too has proved con-

clusively that channels of trade once opened and become fairly settled are not easily diverted into other directions. Hence we may infer as a general rule, that a new road making pretensions to a trade already taking a different direction must live for some years on other means, however well founded its claims may be.

The truth is, these schemes are too often based on a one-sided view of the objects and destiny of the railway. And was it not for the creative principles contained within itself, their utter failure or languishing existence, would soon prove the fallacy of the principle on which they were constructed.

It is not the mere accommodation of the commerce of distant regions of country that should be regarded and depended on as the one vital and living principle of the railroad. No,this, though important, is trivial compared with the great destiny of developing the dormant resources of our country, of bringing into active and energetic existence the agricultural and mineral interests which alone constitute the wealth of the nation, and afford in their turn life and activity to the manufacturer.

We are surrounded with a region rich in nature's gifts, with a soil unsurpassed in fertility and resting on deposits of iron and coal, whose value though known to be great we cannot estimate because the shaft of the miner has not yet told us the full extent of their richness. And yet how few of all our projected lines have the most remote reference to these important objects.

In this connection, it may not be uninteresting, nor uninstructive, to compare for a moment the actual business and value of some of our exclusively Commercial and Mineral roads.

The nett earnings of the Philadelphia and Reading R. R., 95 miles in length, according to the Am. Railway Times, for the last fiscal year, was.....	$1,251,987
Or, per mile.....	13,178
Those of the New Jersey Central, 63 miles, for the same period, were.....	179 210
Or, per mile.....	2,844
Those of the New Jersey R. R., 31 miles.....	316,259
Or, per mile.....	10,201
Those of the Camden and Amboy R. R., 65 miles, were.....	478,413
Or, per mile.....	7,360
Those of the New York and New Haven R. R., 61 miles, were.....	443,993
Or, per mile.....	7,278
Those of the New York and Erie R. R., 445 miles, were.....	2,969,326
Or, per mile.....	6,672

Here, then, we have this remarkable result of a railroad stretching into a mineral region, earning between 50 and 100 per cent. in the nett more than roads, in the same region which aim at through travel. The conclusion, we think, is evident, that in place of multiplying railroads designed to rival each other in the strife for the commerce of distant sections of country, it would be far better to turn attention toward the exhaustless mineral regions, which only wait for railroad facilities to invite the enterprise of intelligent capitalists.

Railroads.

RAILROAD CELEBRATIONS.

Opening of the Ohio Central R. R.—The formal opening of this road took place on Wednesday of last week. The cars had run over the road for several days previous; and the superintendent was satisfied that "all was right" before the day was fixed. The grand excursion on this occasion consisted of about two hundred invited guests, gentlemen of wealth and enterprise, whose capital and advice had contributed largely to the completion of this important work. Their trip over the Baltimore and Ohio and Ohio Central roads, is said to have been of a most satisfactory nature. They were suitably entertained by all the principal cities through which they passed; and these entertainments were marked by a flow of wit and humor rarely witnessed. The great body of the excursion reached Cincinnati on the morning of Thursday last, and were entertained at the Burnet House. In the evening, in company with many of the principal citizens, the party partook of a sumptuous supper, which will be remembered by all present as one of the most interesting occasions which they have had the fortune to witness. There is a benefit resulting from the interchange of sentiments and good wishes between the choice of spirits of distant sections of our land. And this gathering of the enterprise and capital of the East with the hard working men of the West —men who have borne the burden of gigantic undertakings, and carried safely through the immense interests entrusted to their care —was marked by that eloquent flow of kindly feeling and of wit, which may be heard and appreciated, but not conveyed to silent paper. The sentiments of the toasts were ably and beautifully responded to by gentlemen from various sections; and the entertainment was highly expressive of the satisfaction that might be expected to follow the successful completion of one of the most important works of which our railroad system may boast.

Opening of the Illinois Central R. R. to Galena.—On Wednesday of last week, another link in the great chain of railroads was formally dedicated to the purposes of trade and travel. At 8 o'clock, a gay crowd of guests, from Chicago, consisting of both gentlemen and ladies, started in the cars, "westward bound," to meet at Galena, the people of the emporium of the upper Mississippi valley.

The excursion was joined on the way by the guests from the principal towns, and all arrived safely at Galena at about four in the afternoon. The supper in the evening is represented as a pleasant affair; and the presence of the ladies served not a little to add to the enjoyment of the occasion.

Illinois Central Railroad.

The formal opening of this road from Freeport to Galena, 62 miles, affords occasion for the following review of the present state of completion of the whole work, which we find in the Chicago Democratic Press:

Following the main trunk south from Freeport, there is a space of about 48 miles to a small town called Amboy, 40 miles south of Dixon, which is not yet completed. The work is in a forward state, and will be finished early in January. From Amboy, south to Vandalia, a distance of 196 miles, it is finished and in operation. From Vandalia to Sandoval, 25 miles, and also a small gap of about five miles, near Centralia, remain to be completed.

From Centralia, south to Cairo, 112 miles, the road is completed and in operation, and as soon as the five miles near Centralia are completed, which will be in about a week, St. Lonis will have a railroad connection with Cairo by the Ohio & Mississippi, and Illinois Central roads. Three parties are laying track on the 22 miles south of Vandalia, and by or before the 15th of December, Chicago herself, by the Aurora or the Chicago and Mississippi and the Illinois Central roads, will have a direct railroad connection with Cairo. Our communication, therefore, with New Orleans and the Gulf cities, is never to be subject to the frosts of winter or to low water on the Mississippi and the Illinois. All the main line, therefore, will be finished by the first of January, except sixteen miles from Galeua to Dubuque. Of the main trunk, all will be finished from Cairo to Galena, except 48 miles south of Freeport, by the 15th of December. From this city, the Chicago branch is completed to a point 40 miles sonth of Urbana, a distance of 166 miles from Chicago, making, with the 454 miles of the main trunk already in operation, 574 miles of railroad which have been built and put in operation by this company in a little more than two years. From this point, 40 miles south of Urbana, about 80 miles of the Chicago branch remain to be completed early in the spring. The grading is in a state of forwardness, and as soon as the iron can be brought on, after the opening of navigation, it will be finished and put in operation. Chicago will derive, however, nearly all the advantages the road can afford us by a connection with the lower Mississippi after the fifteenth of December.

Our citizens may well congratulate themselves at the near completion of this gigantic enterprise. It is designed to develope the resources of our state, and to have a snbstantial influence npon our prosperity far beyond the hopes of the most sanguine. It penetrates one of the finest agricultural regions in the world; and it must uot be forgotten, that exhaustless beds of coal are fonnd beneath the magnificent prairies through which it passes.

Resistance of Railroad Curves.—R. A. Wilder, Esq., engineer and superintendent of the Milne Hill and Schuylkill Haven railroad, informs us, that in his practice of the location of the new portions of his road, he has found that the usnal formula, by which curves are "flattened" upon grades, is somewhat incorrect. The speed of trains, which is an important element in such comparisons, is fixed upon his road at from eight to twelve miles per hour; whereas an ordinary equation of curvature to grade is as a radins of 400 feet to a grade of 26 feet per mile, Mr. Wilder has found that a curve of such radius is only equivaleut in the practical working of his road, to about twenty-one feet per mile.

We give the result of Mr. Wilder's experience as a useful physical fact, inasmuch as ordinarily there is little exact knowledge of the resistauce of *curves*. It must not be overlooked, that in this case the *speed* is that of the slow burden trains.—*Railroad Adv.*

OHIO AND INDIANA R. R. CONVENTION.

We have received, through the politeness of the committee, a printed copy of the Rules and Regulations adopted by the convention of the railroads of Ohio and Indiana, at their adjourned meeting, at Dayton, Oct. 25, 1854.

Those who have watched with a careful eye the progress of railroad interests, have been convinced of two things: that the business of railroads generally has largely increased, and that also there are many points in which railroads have suffered serious imposition. How far these impositions have been the result of rivalry and competition, it is not now our purpose to discuss. These things have undoubtedly had their effect; but it is sufficient to know that the evil did exist, to prove that it needed some remedy to be applied in season. This remedy has been sought for in the present convention, and thus far, we are happy to say, without any indications of that spirit of monopolism and combination which is so apt to follow a long series of disconnected efforts.

The subjects mainly under the consideration of the convention were such as related to the revenue of the roads. It is very evident that so long as railroads continue to be the greatest interest of the country, it is of the highest importance that the integrity of their stock should be well maintained. It is not enough for a road to pay a handsome dividend for a few years, while its first crossties and iron last; enough must be laid aside out of its earnings to meet the necessary expenses for renewing everything of a perishable nature which may be employed in the construction or working of the road; and it is for this purpose more particularly that the changes proposed are intended to be applied.

Mails, expresses, fares and freight, have each received their share of attention; and in each particular, reform has been resolved upon.

But, upon these questions, we shall quote the report itself. The following roads were represented:

Mad River and Lake Erie; Cincinnati, Hamilton, and Dayton; Cleveland, Columbus, and Cincinnati; Bellefontaine and Indiana; Cleveland and Pittsburg; Central Ohio; Steubenville and Indiana; Dayton, Xenia, and Belpre; Dayton and Western; Ohio and Mississippi; Greenville and Miami; Springfield and Columbus; Dayton and Michigan; Cincinnati, Wilmington, and Zanesville; Columbus and Xenia; Cleveland, Plaincsville, and Ashtabula; Terre Haute and Richmond; Lafayette and Indianapolis; Madison, Indianapolis, and Peru; Indianapolis and Bellefontaine; Indianapolis and Cincinnati; Indiana Central; Jeffersonville railroad.

The conclusions arrived at are contained in the following rules and regulations:

1. MAILS AND MAIL SERVICE. — That railway companies charge, as the lowest remunerative price for one hundred square feet of car room, including a distribution room and conveniences of lights, stove, fuel and fare of route agent, sent once each way daily, thirty-seven and a half cents per mile for each mile run, or $235 per mile for 313 days. For any additional room, either in the same car, or any other car or train, twenty-five cents per mile for each one hundred square feet. The mails to be received and delivered on the railway, at either way or terminal stations; all other expenses to be paid by the department.

2. EXPRESS FREIGHT. — That express freight, carried on passenger trains, should be charged at the rate of not less than nine cents per ton per mile; that the iron safe should be rated at four hundred pounds, and charged at the same rate as goods; and that small packages should be collected in a trunk or box at the terminus, and also charged as goods. Messengers should be charged half price of first class passenger fare.

3. EXTRA BAGGAGE.—That ordinary personal baggage, to the amount of eighty pounds for each passenger, should be carried without charge; that in all cases over eighty pounds, the charge should be at the rate of not less than one half cent per one hundred pounds per mile; and that each railroad company should limit its liability for baggage to an amount not exceeding one hundred dollars.

That railway companies should release themselves, as far as possible, from all responsibility for the transportation of baggage consisting of articles not strictly for the personal use of the passenger carried. Trunks containing goods should be taken as freight or express matter.

4. COLLECTION OF FARES IN CARS.—That each railroad company issue a special notice to passengers, accompanying such rates of passenger fare as it may establish, stating that a discount of five cents will be made on each ticket purchased at the office, and that a corresponding discount will be made to each passenger taking the cars at stations where no tickets are sold.

5. FREE PASSES AND HALF-PRICE TICKETS.— That no *Free Passes*, or tickets to pass free on any railroad, shall be hereafter granted to any person to be used after the first day of January next, except by a company to its own directors, officers, agents, and employes on the road of such company, and under such rules and regulations as the directors thereof may establish.

That the carrying of passengers (except children under twelve years of age), on railroads at half fare, or for any other rate below the regular price or fare established for carrying passengers of a similar class, be confined to passengers going to and returning from the regular Annual State Agricultural Fairs, under such regulations as the Superintendents of roads shall adopt to prevent imposition: Provided, that children under five years of age shall pass free under the tickets of their parents or guardians, and that children between five and twelve years of age shall be charged half price: Provided further, that this resolution shall not prohibit local excursion trains, with reduced fares, at the discretion of the several companies: And provided, also, that delegates to railroad conventions for general purposes, shall be entitled to pass free in going to and returning from the same, on the certificate of the secretary of the company sending such delegates; which certificate shall specify the time and place of holding such conventions, and that the holder (naming him), has been duly appointed a delegate to the same.

That the several companies here represented, require written passes to be issued on their respective roads to every employe of inferior grade, from his superior, stating that such employe is going on the business of the company, for each trip he may so pass; which pass shall be taken up and returned to the proper officers of the company by the conductor, with other passage tickets.

That NO FREE PASS will hereafter be issued or renewed to any *shipper or forwarder of freight*, as such.

That from and after the first of January next, NO RETURN PASS will be issued to any *owner* or *driver of stock*; nor will any such owner or driver be passed free on any other train than that which carries his stock.

That no letter of introduction or certificate shall be given to any employe or other person, recommending him to the courtesy of a free pass.

6. AGENTS AND RUNNERS.—That the companies represented in convention shall discharge all persons in their employ as agents or runners, for soliciting passengers or freight, by the first day of November next, and discontinue the employment, directly or indirectly, of all persons in such capacity thereafter.

That whenever, hereafter, it shall be important to circulate or post bills in any place where two or more companies are interested in so doing, the same, if practicable, shall be done at the joint expense and under the joint direction of such companies.

That all bills or other publications containing official announcement in reference to transportation business, shall be issued with a responsible signature; and that simultaneous with such issue, copies thereof shall be forwarded to the companies interested in such business; and nothing disparaging or derogatory to other lines of road shall be inserted in such bills or publications.

That no employe of any company shall, under any circumstances, be permitted to solicit passengers, under the penalty of immediate dismissal from the employment of such company.

That no compensation shall be allowed, directly or indirectly, to any person for the sale of tickets, except at the regular offices established by any company on its line, or at the business termini of its road; and no passenger tickets shall be sold at other places: Provided, that through tickets for any connected line of roads, or of roads and steamboats, may be sold at any regular ticket office on such line of roads; but the same shall be done as a matter of reciprocity, and without charge.

7. FARES AND FREIGHTS.—That the railroad interests here represented will be best promoted by the adoption, as near as practicable, of a rate of fare of not less than two and a half cents per mile for passengers transported in cars of the first class; of not less than two cents per mile for through passengers, in cars of the second class; and of not less than one cent per mile for emigrant passengers, when carried in connection with freight trains.

That the rates for the transportation of freight,

when carried on trains at an average speed not exceeding ten or twelve miles per hour, should not be loss than two cents per ton per mile for all heavy and cheap articles in quantities not less than a car load; and not less than three cents per ton por mile, for the same articles in small quantities; not less than four cents per ton per mile for all light and valuable articles in large quantities; and not less than five cents per ton per mile for the same articles in small quantities; and not less than twenty-five cents por car per mile, for single deck cars loaded with stock: Provided, that when lines of roads, at certain seasons of the year, are compelled to compete with water communications, such liues may modify their rates accordingly; subject, however, to the approval of the executive committee hercinafter provided for.* Provided, also, that the forcgoing shall *not* be construed in any manner to affect any existiug contracts heretofore made by any company to carry coal and stono at less rates.

That the classification of all through freights to and from New York, Philadelphia, and Baltimoro, shall be the same as adopted by the convention of railroad snperiutendents, held in New York, on the 26th day of September last.

That for the purpose of placing the emigrant business in the hands of the several railroad and steamboat companies, and shielding the emigrants from imposition, thoso tickots only which are issued by other railroad and steamboat companies, ruuning in conuection, shall be received on and after tho first of December next; and that al tickets issued by individuals after that date shall be rejected.

That routes, composed of lines or parts of lines of roads between important points, with a difference in distance over the shortest line not exceoding twenty-five per ceut., shall be deemed competing routes; that the rates of fare shall be governed by the parties composiug the shortest route; and that all settlements between compauies relating to such tickets, shall be made *pro rata*: Provided, that no company composing a portion of any short routo shall be required to receive less than a *pro rata* proportiou of short route fare.

This rule shall also apply to any two or more routes composed in part of steamboat transportation, and also to the transportation and settlement of freights as well as of passengers.

Routes, composed of lines or parts of lines of roads between two important points, with a difference in distance over the shortost line exceeding twenty-five per cent., may be formed by agreement; but the companies composing such competing routes, shall uot transport freight or passengers at less rates than those established by the shortest route.

That uo company shall be required to abrogate existing contracts with any other companies; but may suspend the operatiou thereof, with tho assent of the other contracting party or parties, until the system adopted by this convention be tried, and its stability and adaptation to the purposes designed be fairly tested.

8. Executive Committee.—That there shall be an Executive Committee of three appointed—two in Ohio and one in Indiana—to whom complaints shall be made of any allegcd violations of the rules and agreements that may be established upon the recommendation of this convention; and upon the receipt of such complaint or complaints, said committee, or a majority of them, shall proceed at once to inquire into and report upon the same, unless the parties, or either of them, shall desire to be heard outside of said committee; in which case said committee, or a majority of them, shall require three good and well qualified men to investigate, decide, and report upon the facts; which report and decision the said committee shall communicate to the several companies who may be parties to the rules and agreemonts hereby recommended.

That the Executive Committee, or a majority of them, shall have power to call a convention of the roads herein interested, whenever, in their judgment, the interest of the parties may requiro it.

S. Crawford, of Dayton, and Jacob Strader and J. C. Wright, of Cincinnati, were appointed such committee.

The Cleveland, Painesville, and Ashtabnla railroad dissent from the action of the convention only so far as may become nccessary in order to compete with routes not running through the state.

9. Resolutions.—*Resolved*, That the proceedings of this couventiou, (subject to the dissents of the Cleveland, Painesville, aud Ashtabula railroad company, and of the Central Ohio railroad company,) be approved aud adoptcd.

Which resolution was unanimously agreed to.

That the railroad companies in the States of Ohio and Indiana, not here represented, and those of adjoining states, having lines of roads counecting with any of the railroads of Ohio or Indiana, be aud thoy are hereby respectfully requested to agree and become parties to the rules and agreements adopted by this convention.

That the proceedings of this convention, together with its former proceedings, be revised by tho committee of three heretofore appointed, and be published under the direction of said committee, A. Kelley, *President*.

Wm. S. C. Otis, S. Brush, } *Secretaries*.

* To so much of this as relates to the approval of the Executive Committee, the Central Ohio railroad company by their delegates, entered their dissent and protest, and refused to adopt tho same.

BLUE RIDGE R. R. AND KNOXVILLE & KENTUCKY R. R.

The snspension of the publication of the Register during the recent epidemic, preveuted our notice of the fact, that tho depots for the Blue Ridge railroad company, and the Knoxville and Kentucky railroad company, were located by Mr. Lythgoe, the chief engineer of the former, upon the lands of Messrs. King & Co., immediately north of the town. As we are reminded of this omission, an occasion is presented to say a word or two with reference to the prospects of these companies. Respecting the former, we may say, that the corps of ongiueers engaged iu the location of the Teunessee portion of the road, will soon complete their work, so as to be able to furnish the contractors' profiles, etc., and the compauy with satisfactory estimates. The work at the southern end of the liue is still progressing as rapidly as a large operating force can drive it along. Of the Knoxville and Kentucky road, though no location has yet beeu made definitely and conclusively, yet the company are eugaged in efforts which we think will result in the speedy construction of the road. Col. Crozier, who has heretofore acted as the president of the compauy, in order to preserve the organization, (at no time having it in contemplation to devote his whole time to the work,) resigned the office a few days since, and the Board of Directors elected Col. Wm. M. Chnrchwell to fill the vacancy. It is Col. Chnrchwell's purpose, we understand, to decline being a candidate for re-election to Congress from this District, in order that he may devote his energies to the work of making this road. How far he will be able to succeed, can in a great measnre be determined by his antecedents as a financier.

While referring to these roads, we may, with some propriety, say a word or two respecting a discussion which had been going on in South Carolina recently, both by the press and candidates for the Legislatnre, as to the propriety of committing the State of South Carolina as s stockholder to the extent of $1,000,000 to the Blue Ridge railroad company. The discussion has been provoked by a newspaper published at Spartanburg, in which it is alledged, that to enable South Carolina and the city of Charleston to have railway commnnication with the valley of the Ohio, Spartanburg rather than Anderson C. H., should be the starting point, and the ronte should be the valley of the French Broad, rather than that of the Tennessee. Whether the Spartan is right or wrong in the comnptation of distances from Knoxville to Charleston, by the ronte which it advocates, we do not know; in the event it is, however, the distance by the Tennessee valley route is only three miles greater; and there is this consideration which we desire to press npon the public mind of South Carolina, in order that no member of the approaching Legislature of that state, or any other citizen may be misled, viz.: *In Tennessee there is no other charter for the construction of a road from Knoxville in the direction of South Carolina than that which is consolidated with the Blue Ridge company.* Of course, so far as Knoxville is concerned, it is a matter of little or no interest whether her railway connection with the sea-board at Charleston is by the one passage of the Blue ridge or another, especially in view of the fact that the difference in the distances by the two routes proposed is only three miles. But we are not prepared to co-operate with any party in South Carolina in building a road from Spartanburg to Knoxville, *via* the French Broad route. We have, as we have said before, no charter, and as a matter of course, we have no state loan, and could not expect to obtain any; we have, indeed, neither private or public funds to be expended in the construction of such a road; nor are we aware that there is a single individual in Tennessee who is expecting a road to be made from Spartanburg to Knoxville. In view of these facts, we trust that the State of South Carolina will bestow the aid upon the Blue Ridge company, as, in that event, the state will have co-operation, in the construction of this great highway to the valleys of the Tennessee, Ohio, and Mississippi, on the part of Tennessee and her citizens, to the extent, at least, of $2,500,000, in the form of subscriptions of stock and state bonds.

In 1836, Tennessee was pledged to the enterprise then styled "the Louisville, Cincinnati, and Charleston railroad," in the sum of $1,300,000; now she promises and has already secured nearly a million more than that sum, in the event the Blue Ridge railroad company shall succeed in obtaining the means to bring their road to our southern border; and of this, we do not now entertain the shadow of a doubt.—*Knoxville Register, Oct.* 18.

RAILROAD CONVENTION.

The general managers of most of the New England, New York, New Jersey, and Canada roads, have held a meeting at the Astor House, for the discussion of tha general subjects of the policy and management of their roads. By a recent resolution, the representatives of all the roads in the United States, are invited to parlicipate in the futnre proceedings of the convention, one meeting of which will take plice in New York on Thursday, 23d inst.

Miscellaneous.

THE ADIRONDACK IRON ORES.

The approaching completion of works, destined to introduce these celebrated ores to market, makes them, at the present time, a subject of general and deserved interest. Ever since Professor Emmons, as state geologist, made the whole world acquainted with the extent, richness, and purity of these ores, and so faithfully appealed to national spirit for their occupation and improvement, it has remained a subject of deep regret that they were so inaccessible as to preclude their being worked on an extensive and profitable scale. The present earnest spirit of public improvement had not been aroused, and so far as mining depended upon *railroads*, in 1840 and '42, a *gold mine* might almost have remained undisturbed for the want of them.

But, as will be seen in another part of our present number, the Sackett's Harbor, and Saratoga railroad will be in operation within one year, by which 300 or 400 tons of these ores may be brought, *daily*, to tide water, at an expense of but $2 a ton. The near prospect of such a result is a good occasion for reminding our readers of the location, extent, and character of the Adirondack iron ores.

These beds are situated in Newcomb, Essex county, and are within 125 miles of tide water. The portion of the state in which they are comprised, is the highest of the great table land of northern New York, being about 1889* feet above the sea. The principal beds are near Sanford and Henderson lakes, which are a part of the head waters of the Hudson river.

There are four beds which have been especially examined, called respectively the SANFORD, COARSE-GRAINED BLACK, FINE-GRAINED, and CHENEY ore beds.

The SANFORD bed is within eighty rods of the lake of the same name, and to which, by a gentle descent, the ore can be easily carried, and loaded on cars or boats. This bed has been traced with certainty for 1667 feet in length, and 514 feet in width, beyond which limits it is believed to extend in length for two and a half miles. This bed lies upon an angle of about twenty-five degrees, favorable to perfect drainage, and is covered by a soil from one to three feet in depth, which is also heavily timbered. Estimating only the *measured* bed, at only two feet thickness, 6,832,734 tons of ore are contained; equal to 3,000,000 tons of iron of the highest quality. Nearly all of this ore can be raised without gunpowder, and can be mined and loaded on the cars for only one dollar per ton. These estimates are those of Mr. J. R. Thompson, the superintendent of the iron mines and works.

Professor Emmons describes the Sanford ore as entirely free from pyrites, and almost equal exemption from sulphurets, and other substances likely to injure the iron. With a single exception, the Sanford ore is the purest known. This ore, as are all the others, is a black magnetic oxide,—makes the best kind of iron, and *makes fast*.

The COARSE-GRAINED BLACK ore bed is some two miles from the Sanford bed, and has been clearly traced for more than 700 feet in width, and for 3,168 feet in length. This immense bed has the same purity as the Sanford bed, but is, in the opinion of Professor Emmons, the best of all for quality of ore, and of the iron produced from it. Possessing both the important qualities of hardness and great tenacity, the iron from this bed is the best adapted for such parts of machinery as are subject to great friction and great strain, as for axles of locomotives and cars, pedestals, piston rods, crank pins, trees, etc., etc.; and also for chain cables, anchors, spikes, nails, etc. This bed furnishes the bar iron from which the only American cast steel has ever been successfully manufactured. The Adirondack cast steel, made at Jersey city, not only received the Gold Medal at the great London Exhibition, but, which is quite as good an endorsement, has received the strongest commendations from the foremen and managers of the largest machine shops, rolling mills, stone yards, and other establishments in the country. The Allaire Works, T. F. Scott & Co.'s Works, the Glendon rolling mills, the United States Navy Yard at Washington, the Springfield Armory, and other works, have used it with the highest success.

The FINE-GRAINED ore bed is within a quarter of a mile of the black-grained bed; is 150 feet wide, and has been traced, in length, 5,742 feet, or more than one mile. This vein is very valuable also, and promises an excellent quality of iron.

The CHENEY bed is a large mass, about three miles from the black-grained bed.

These ores contain from 70 to 80 per cent. of iron.

As the *best* and most reliable kinds of iron, for boiler plates, axles, engine frames, cables, wire, spikes, nails, and for *steel*, is made only with *charcoal*, and as the best kind of this fuel is furnished at the least cost, and in the greatest abundance in the vicinity of these ores, it is believed that so long as a demand exists for iron for such purposes, northern New York can surpass, in its manufacture, even those districts in which iron is found along with *anthracite* coal. While with the latter fuel, ordinary irons will be made at the least cost, the charcoal iron of the Adirondack region will compete successfully, at but a slightly greater price, with all other American stock, for the purposes mentioned.

The company owning the Adirondack ore beds, have a capital of $3,000,000, and possesses a charter empowering them "to mine and manufacture IRON and STEEL—to make PIG IRON and BLOOMS, also BAR IRON, RAILS, RAILROAD CHAIRS, SPIKES, ENGINES, LOCOMOTIVES, CARS, CAR-WHEELS, AXLES, and all kinds of machinery, tools and utensils, made in whole or in part from iron and steel. Also to manufacture LUMBER, CHARCOAL and BARK for TANNING purposes, and to make flour from all kinds of grain."

The estate of this company comprises 103,277 acres of land including the ore beds described, and large tracts of hard wood and pine lumber lands; the latter, in one surveyed lot of 3,500 acres, having over 20 M. to the acre, or 80 million feet in all. This estate, with the high value to be conferred by the railroad improvements in progress, and with the liberal privileges of its charter, make the "Adirondack Iron and Steel Company" one of the most important in the great interest with which it is identified.

Should we visit the Adirondack region we may find other matters of interest to lay before our readers.

* The actual elevation of the Adirondack Works at the village of McIntyre.

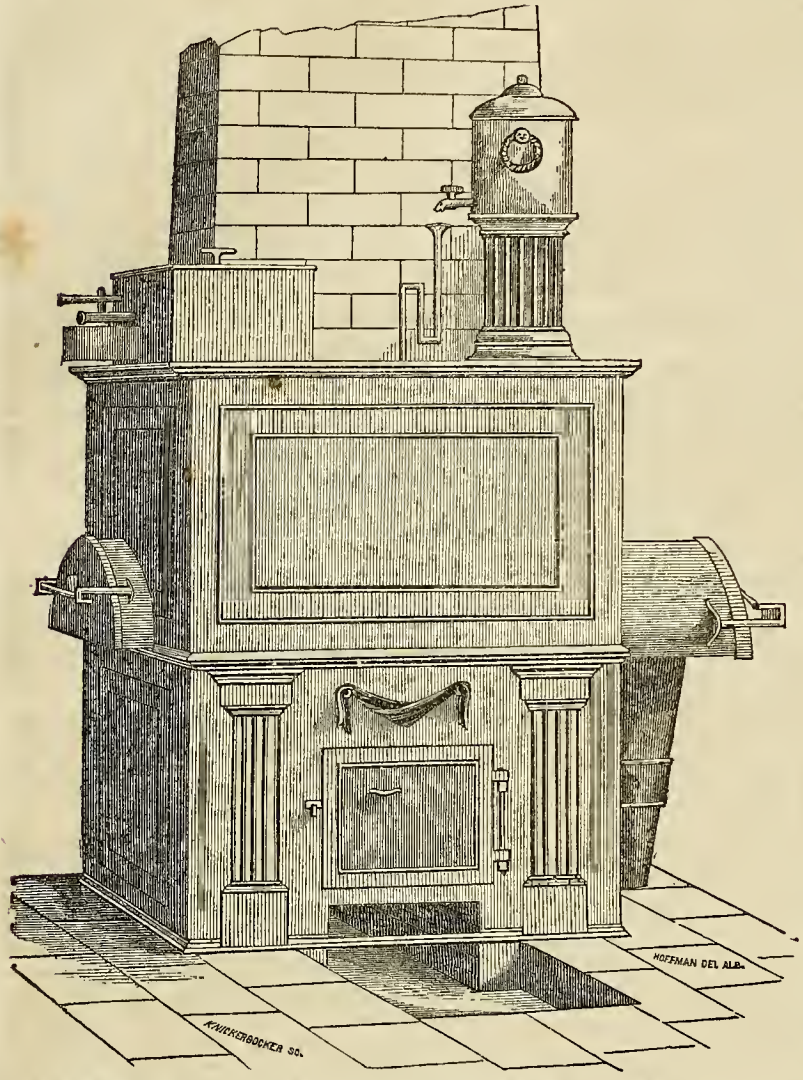
IMPROVED SPARK ARRESTER.

The spark arresters applied in the repair shops of the New York Central railroad company, are probably superior to any others in use for the purpose designed. Such is our own opinion, from their lightness, simplicity, and ample capacity for draught; and in the fact that for many of the engines they are used in preference to any of the patented forms. Their peculiar points are in the form and construction of the deflecting cone, and in the application of the wire netting. The form and dimensions of the inside chimney are also different from the usual proportion. The deflecting cone is made of sheet iron. Its form may be understood by describing its shape in its cross-section. The rolling or bent portion is two semi-circles, each twelve inches in diameter and twelve inches apart. In plan, it would be half of a hollow-cylindric ring, of three feet outside diameter. The sides of the *cone*, proper, are tangent to the inside of the circular surface of the ring, the angle of the point of the cone being a right angle, or 60o. For such a deflector of three feet diameter, the top of the outer casing is four feet diameter. From a little above the outer edge of the deflector, a wire netting extends diagonally (or conically) downwards, so as to meet the inside of the outer casing. Above, all is open. The sparks are thus deflected by a very large cone and by the *netting*. There is no back pressure of steam against the latter, as is the case in the "bonnet pipe." The deflecting process is so complete as to secure about all of the sparks. The smoke is not "trailed" on the outside.

The inside chimney, for a 16 by 20 inch cylinder, is 16 inches at the base; contracted to 11 inches at 8 inches *above* the base; and afterwards regularly enlarged to 14 inches at the top. The cone is placed centrally over the two blast pipes, by plumbing downwards when the boiler and frame of the engine are *level*. Great care is exercised in this respect, and a more than usually perfect vacuum is obtained in the smoke box; thereby materially increasing the strength and efficiency of the draught.—*R. R. Advocate.*

NEW ALBANY & SALEM RAILROAD.

Much dissatisfaction has recently been expressed about the management of this road, and a desire expressed for a meeting of the stockholders to examine it. Before any such move is made, we ask the community to consider the following facts:



The road is one of great length, has been built with unusual rapidity, the business has been far greater than was anticipated, and consequently the power on the road was not sufficient for its business. Negotiations are going on for increased apparatus, which have been somewhat retarded by the recent panic in the money market. We have good reasons to believe, that in due time these negotiations will be effected, increased power will be secured, the Board will be freed from its present embarrassments, and the business of the road will be greatly increased, and promptly done. The president is now actively at work, and the ability heretofore manifested in overcoming difficulties will, we doubt not, soon give credit and standing to the road.

Too much, as we have before remarked, has been looked for from the road, the injuries done to the engines and cars greatly exaggerated, and the excitement greater than the circumstances would justify. The road is now doing a business of from $60,000 to $70,000 per month, and in due time will take its stand among the first roads of the country. We trust the community will bear with patience for a short time, and all will yet be well. To place the road in a good condition, some two or three hundred thousand dollars should be expended; and if there are those who would increase their stock, or subscribe, it would greatly assist the directers, and add much to the interest of the road. We have all confidence that the business will soon be done in a style to give general satisfaction. There is not a road in the country of the same length, and doing as much business, upon which fewer accidents have occurred.—*Montgomery Journal.*

WILMINGTON AND RALEIGH RAILROAD COMPANY.—The annual meeting of this Company was held at Wilmington, N. C. on Thursday. The Journal says:

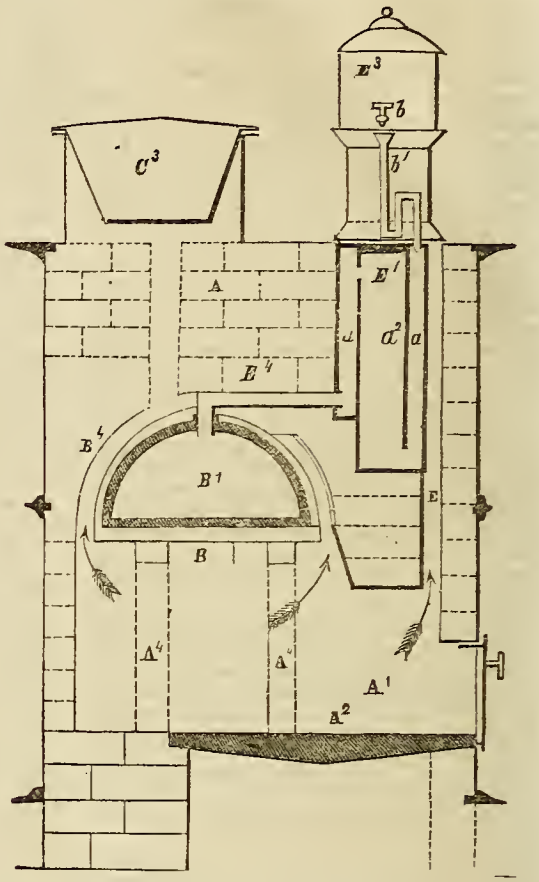
From the report of the President and Directors, we learn that the gross receipts of the Company for the year have been $382,880.62; expenditures $291,220.73 nett profits $191,559.89; from which deduct interest and exchange, $63,697.12 and there is left as nett profits to stockholders, $127,962.77. The liabilities of the Company on the 1st of October were $1,052,070.47.

N. AUBIN'S GAS GENERATOR.—Patented September, 26, 1854.

The superiority of Gas Light over all other systems of illumination is now so well established, that its use is rapidly spreading wherever it can be obtained. But, owing to the difficulties and inconvenience accompanying the generating of gas for lighting, inhabitants of cities and a few very large establishments only have been able to enjoy what is now considered as indispensible to the pleasures and business of modern society.

The apparatus to which your attention is now called, and for which a patent has been granted in the United States, fills up a vacancy in the numerous contrivances, calculated to extend to a larger number the requirements of social life. By its use, all those who have been deprived of gas light, though willing to pay for it, are enabled at once to become their own gas manufacturers, and not only to procure gas, but to introduce into their dwellings, or places of business, a *more agreeable*, much healthier, better, and yet cheaper article than they could obtain from gas companies in the towns.

This apparatus is not an experiment; it has now been long enough in practical operation to have proved its usefulness and superiority. It can be managed by any common laborer after an hour's practice.



The annexed engraving shows a front perspective view of the improved Gas Generator. The size of furnace calculated for any large dwelling, factory, etc., occupies a space three feet square. It is encased in cast iron, and the interior is of fire bricks, shaped for the purpose. It can generate (during a day of twelve hours) gas enough for 500 hours of 1 large burner, (a five feet burner,) or 10 hours for 50 burners, or 5 hours for 100 burners, at a cost of at most $3, and less if on a larger scale.

The same light, with coal gas, at $3 per thousand cubic feet, would cost *seven dollars and-a-half!*

On account of the superior richness of the gas generated from rosin, or other material, by our improvement, it burns, as compared with that from coal, in a proportion of two to five, and therefore the space required for generating and keeping it is in the same proportion.

The following condensed extracts from the specifications attached to the patent will sufficiently indicate the construction of the apparatus and its advantages:

Fig. 2.

In the above diagram A is a furnace of fire bricks with a fire space A^1 provided with a grate A^2 and an ash pit $A.^3$ There are one or more thin arches A^4 over and across the fire space which support a platform of fire brick B for the gas generating retort B^1 to lie upon, and in a measure protect it from the direct action of the fire, and consequently it lasts much longer. It is made of iron, open at each end, and provided with doors secured by bars, wedges and brackets, or screw bolts if preferred.

The retort B^1 may be partially covered on the sides with fire tile, which covering may be extended entirely over the top as represented in the drawing, if desired. There is a flue B^4 around and over the retort B^1 opening into the chimney. The flue B^4 has another flue leading from it up under the vessel C^3 so as to heat it, and the materials in it from which the gas is to be made.

There is another flue E, leading from the fire place up and around the steam generator and heater E^1. The steam generator and heerer E^1 consists of two small cylindrical vessels *a*, a^1, placed upon the opposite side of a larger one, a^2, which is connected to *a* at the bottom, and to a^1 at the top as represented. E^3 is a vessel provided with a cock *b* to supply the generator E^1 with water through the siphon pipe b^1 which conducts the water on to pieces of bricks, furnace stone, or other refractory or porous substance, with which the apartments *a* and a^2 should be filled so as to gradually and regularly convert the water into steam that is introduced into the generator E^1, and prevent it from assuming the globular form and falling to the bottom and forming steam suddenly. The steam generated as above described is heated to a higher temperature, and passes into the retort B^1 through the pipe E^4 uniting with and aiding in generating the gas which may be made of rosin, oil, grease, turpentine, tar or other substance rich in carbon and hydrogen, at the same time expelling the gas and undecomposed matter from the retort to the cooler, where the undecomposed matter is separated from the gas with facility and without further trouble. The rosin, oil or other material is put into the vessel C^3 which is heated as before described so as to melt the same. The liquid passes through a strainer, then through a cock (seen in fig 1) and finally into the retort $B.^1$ The apparatus having been constructed as above described, the vessel E^3 is supplied with water, the vessel C^3 with rosin or other material, and a fire made upon the grate. When the apparatus is sufficiently heated, the attendant turns the cocks so as to supply the requisite quantity of melted matter and water to the respective retorts where the steam and gas are generated.

The manufaeture of gas for illumination has been attended with many disadvantages which have generally prevented its introduetion into private establishments or small communities; and when obtained from eoal, the generating, cooling, purifying apparatus are costly and oeeupy a large spaee, requiring a partieular study for their proper management; and their very offensive odor exeludes them from dwellings. When made from rosin, grease or other material introdueed in a liquid state into a heated retort, it is liable to mueh loss and difficulty; for if the temperatue is allowed to rise above the dull red heat, a portion of the gas generated is decomposed and deprived of mueh of its illuminating power and the earbon liberated is deposited in the retort and in the pipes leading from it, eventually clogging them and stopping suddenly the process. If the apparatus is kept at a lower temperature, mueh of the material used is lost and carried off in the form of vapor. These disadvantages whieh in all previous inventions for furnishing gas to private establishments have been found so great as to render them useless, we elaim to have overeome entirely. By introducing highly heated steam into the gas generating retort in the manner speeified, (the main improvement which we claim) more gas possessing greater illuminating power, and in less time, is produeed; the retort and pipes are not elogged, and the gas itself is more permanently fixed, ean be kept in the gasometer any length of time, and requires no purifying.

The superiority of the present apparatus consists then in generating gas which

First. Is cheaper than eoal gas.

Second. Can be prepared by any person.

Third. Produees a superior, more pleasant light, with less than half the volume required by eoal gas.

Fourth. Can keep without loosing of its illuminating power and therefore be made in any suitable quantity for future use.

Fifth. Besides without emitting noxious compounds so injurious to health, plants, ornaments; without heating the apartment as coal gas does.

Sixth. Requires for keeping but less than half the space of other gas.

Seventh. And ean be generated in a private establishment without any unpleasant smell.

The suceessful operation of this apparatus has demonstrated that it is the only generator whieh not only insures to consumers on a small scale, or isolated from cities, all the praetieal advantages of gas manufactured on a large seale, but moreover proeures a more agreeable, a mueh healthier and a better illumination.

Monetary and Commercial.

Since our last issue, there has been a gradual quieting down of feeling and excitement noticed during the preceding two weeks. The suspended banks are proceeding in the settlement of their affairs, and interested parties are patiently waiting for the results.

During times of panic and confusion, such as those we have just experienced, in addition to the distrust naturally developed, when no one knows with any approach to certainty, the extent to which the unseen evil may spread, there is another feeling which frequently manifests itself, and which, while it exhibits the wickedness of mere avarice, often results in loss to those who foster it. We refer to a disposition to increase the confusion by a spread of vague suspicions and disconnected rumors, for the purpose of profiting by others' fears and credulity. Numerous prophecies are made by those who either believe or pretend to believe that ruin—absolute and inevitable—threatens every interest. Under some such influences as these, some parties have been boarding gold, and prophecying that exchange would range from 10 to 15 per cent., and gold from 5 to 10.; and persuading themselves that their impressions must prove true, have purchased largely; and now that things are beginning to assume a more settled shape, find that speculation is not always profitable. Exchange is offering at 1¼ per cent., and gold does not command more than from one to 1¼ per cent. The commencement of the winter business, pork packing, has doubtless contributed somewhat to this result. Our produce must find a market, and bills of exchange are much more convenient than large amounts of gold and silver. Add to this, also, that while some banks in Ohio and Indiana have suspended, the number is not sufficiently great to warrant the fear of a general breaking down of banking interests, such as predicted by panic makers; and it is easy to conclude that the dark days of the crisis must soon pass.

In stocks we have but little to quote; there are many transactions, and prices are irregular.

CINCINNATI STOCK SALES.

AT THE STOCK BOARD,

MERCHANTS' EXCHANGE

And at Private Sale.

Sales made, but not reported this week.

At the East, in business circles, there is quoted a growing ease in money matters. This is more generally felt in outside rates, as the banks do not yet feel safe in extending facilities to their customers. The heavy Fall payments, however, are over, and dealers generally are contracting their operations. Rates of interest, however, are unchanged, being quoted at 7 per cent. for call loans to leading honses. First class paper, not much offering, 10 to 15 per cent. for favorite names, and 16 to 18 for others.

The stock market exhibits the full effect of Western and Southern difficulties; sales are forced, and as many who formerly bought for investment, are holding back, the transactions that are effected in Wall-street, depend chiefly on Wall-street capital. It is, of course, impossible for any man to say at what rate his stock will be sold, if once offered.

Sales by A. H. Nicolay, Nov. 16—

$13,000 Junction Railroad Second Mortgage Bonds, due November 1st, 1862; interest payable 1st May and 1st November, in New York, $1,000 each 61¼

RAILROAD EARNINGS.

MEMPHIS AND CHARLESTON RAILROAD.—The following is a statement of the receipts of this road for the past month of October, with the receipts for the corresponding month of last year:

	October, 1854.	October, 1853.
Freight account	$14,509 39	$10,250 28
Passage "	8,217 33	5,986 82
Mail service	470 00	431 62
	$23,196 72	$16,668 72

The above statement shows an increase of $6,528 over the receipts of October of last year. This is most convincing evidence of the increasing prosperity of the road.

ANDROSCOGGIN AND KENNEBEC RAILROAD.—Comparative exhibit of the earnings of the road, for four months in 1853 and 1854;

	1853.	1854.
June	$14,453 45	$15,088 91
July	13,831 81	15,090 91
August	15,888 07	18,512 09
September	15,143 72	19,533 02
	$56,317 65	$68,254 93

Increase, 21¼ per cent.

MICHIGAN CENTRAL RAILROAD.—The earnings of this road for the month of October, 1853 and 1854, compare as follows;

	1854.	1853.
Passengers	$167,178 40	$95,658 16
Freight	95,842 38	97,985 28
Miscellaneous	4,658 28	6,525 00
Total	$267,679 01	$200,163 44
Increase		$67,515 57

JAMES HARDMAN, *Auditor.*

WARSAW AND ROCKFORD RAILROAD.

We learn that the Board of Directors of this road, which met the first of this week at Rock Island, so modified the contract with Culver, Kent & Co., as to give to them an extension of nine months for completing the road around the Upper and Lower Rapids. They also extended the time for completing the road from Nauvoo, to Oquako, to the 1st of January, 1856. Important modifications were also made in relation to the payments which the railroad company were to make to the contractors.

Culver, Kent and Co., have contracted for iron sufficient for thirty miles of the road, and have also made arrangements for an ample supply of funds for the rigorous prosecution of the work.

Next week the work, which for the last month has been suspended, will be resumed, and the grading completed between this place and Nauvoo by the opening of spring. By June next the track will be laid, and the rolling stock put on.

We are assured that Culver, Kent and Co., have now made connections with certain New York capitalists, that they will be able, without any kind of doubt, to perform the conditions of their contracts now modified. Their former failure was more to be attributed to the unexpected stringency of the money market, than to any defect in their calculations. The road now stands upon a firmer basis, and has a better prospect for speedy construction than ever before. — *Warsaw Express.*

WE have now attached to this office an extensive **Composition** and **Press Room** and **Bindery**, under the personal supervision of the proprietors of the RECORD. With confidence, therefore, we call the attention of RAILROAD OFFICERS and others to our extensive establishment, containing every facility for turning out superior work in any and every department of the PRINTING BUSINESS.

We are fully prepared to furnish **Railroad** and other **Reports**, with or without **Maps** or other **Illustrations**, gotten up at short notice and in superior style. Also, **Blanks of any description**, adapted to the wants of the various departments of the **Railroad service**, and to the wishes and tastes of the parties.

Also, **Railroad Tickets** and **Conductors' Checks**. Our patent **Card Press**, enables us to supply any demand at **Short Notice** and in **Unequalled Style**.

Also, **Blank Books**, ruled to any pattern, with or without **Printed Headings**, and bound in the most substantial manner.

With the numerous facilities for doing the **Best Work**, we feel no hesitancy in promising full satisfaction to all who may favor us with their orders.

T. WRIGHTSON & CO.,
Rail Road Record Office, 167 Walnut st Cin.

GAS.

AUBIN'S PATENT.—We are agents for this new and improved furnace, and having had one in operation at our office for several months past, can confidently recommend it as being simple in its operation, occupying little room and furnishing a pure and beautiful burning gas. From the peculiar arrangement of the retort it is not liable to *burn out*, thus saving a great part of the expensive repairs of other furnaces. We are prepared to erect these furnaces at our own risk and warrant them to produce good gas.

T. WRIGHTSON & CO.,
167 Walnut-st., Cin'ti.

TO RAILROADS AND CONTRACTORS.

HORSE POWERS.—The undersigned being agents for the sale of R. H. Peaso formerly Emery & Co.'s Horse Powers, are prepared to furnish them to order. They occupy little room and do their work effectually. T. WRIGHTSON & CO.

NOTICE TO CONTRACTORS.

PROPOSALS will be received until the 11th day of December next, for the graduation and masonry of fifty miles of the Third Division of the Pacific Railroad (Kansas route) of Missouri, extending from California, Moniteau county, to Georgetown, Pettis county. The work will be divided into sections of about one mile each.

Plans, profiles, and specifications can be seen at the office of the subscribers in St. Louis, and also at the Engineer's office in Jefferson City, on and after the 20th day of November, where all information relative to the work can be obtained.

KIRKWOOD, PORTER & CO.

Cincinnati, O

CHARLES FRODSHAM'S

IMPROVED WATCHES!

BEGGS & SMITH,

JEWELERS,

No. 6 West Fourth St.,

Adjoining the First Presbyterian Church,

CINCINNATI, O.,

HAVE received from Mr. Simon Willard, Boston, Agent for the United States, the sole and exclusive agency for the sale of **CHARLES FRODSHAM'S** NEW SERIES OF IMPROVED CHRONOMETER WATCHES, in the states of Ohio, Indiana, Illinois, Michigan, Iowa, Wisconsin, Missouri, Kentucky and Tennessee.

In the Watches of the New Series, Mr. FRODSHAM has succeeded by a more perfect method of compensation, a more correct adjustment in isochronism, and an entirely new and peculiar construction of the train, by which more power is obtained without increase of size, in producing timekeepers of wonderful and unrivalled accuracy. The great importance of the improved watches is a perfect regularity of time under every variety of climate, motion and position. So perfect are the adjustments, that the most violent exercise, such as horseback riding, jumping, etc., produces on them no sensible effect They are therefore, particularly adapted to Railroad purposes.

Liberty is given to refer to the following gentlemen, who, among many others, have proved the excellence of Charles Frodsham's Watches as timekeepers:

Gen. John S. Tyler		Massachusetts.
John E. Thayer, Esq.		"
Enoch Train	"	"
E. C. Bates,	"	"
F. W. Thayer,	"	"
Wm. Whiting,	"	"
Geo. M. Thacher,	"	"
David Dyer,	"	"
Alvin Adams,	"	"
Billings Briggs,	"	"
David Weld,	"	"
Hon. Ebenezer Lane,		Sandusky.
E. F. Osborne, Esq.		Ohio.

The Prices of the New Series Gold Cases, are According to Size, viz:

SIZE 12	
" 14	$230
" 16	
" 18	250
" 20	275
" 22	300

Recommendations:

Boston, Sept. 3, 1853.

The Compensated Lever Watch I purchased of you, made by Charles Frodsham, London, No. 7300, has varied but thirty seconds from mean time in six months, by actual daily comparison with your regulator.

Yours, &c., ALVIN ADAMS.

Mr. Simon Willard.

Boston, Feb. 4, 1854.

Mr. S. Willard Dear Sir—The Frodsham watch, No. 7557, I purchased of you last October, has performed wonderfully well. I have compared it almost daily by your Astronomical clock, and its variations for ninety days is but one second, or a loss of but one-hundredth of a second per day. I consider it better than any Mariue Chronometer I ever used.

Yours truly,
FISHER A. NEWELL,
Late master of Sch., Honolulu.

Sandusky, Ohio, Jan. 1, 1854.

Mr. S. Willard, Dear Sir—More than six months ago I purchased of you two of Frodsham's best watches—up to this time, one of them, No. 7571, has altered from mean time but twenty-seven seconds, and the other, No. 7517, but twenty-three seconds in the same period.

Yours, respectfully.
E. F. OSBORNE.

To Mr. Simon Willard.

Gentlemen—On the 1st of April last I procured from Mr Willard, of Bostou, one of Frodsham's improved series of watches. It was regulated and set to Cincinnati time. It has not, in that period, been suffered to run down, nor have the hands been moved, and to day it is 20 seconds only slow. Respectfully yours,

HENRY O. AMES,
Sup,t Cin. Ham. & Dayton Railroad.

August 18, 1854.

To Messrs. Beggs & Smith.

The followiug is an extract from a letter of William Brown, Esq., Springfield, Ohio, engineer on the M. R. & L. E. R. R., who has personally kept the rate of several of Frodsham's watches.

"Finally from what I have known of Frodsham's watches, I am very strongly impressed with the idea, that they are a decided improvement on all other timekeepers, and were they set in gimballs and used with the same care, I think their performance would equal that of Mr. Frodsham's celebrated box chrouometer, and would answer the same purpose for determiniug longitudes."

DENNEY'S DIVIDED CAR AXLE.

PATENTED JANUARY 31ST, 1854.

THE ATTENTION OF RAILROAD COMPANIES is respectfully invited to an examination of the merits of this valuable invention, which offers to add largely to the safety of life and property.

The valuable features of this arrangement of axle are, a saving of full fifty per cent. in motive power on crooked roads: the rails are protected from being destroyed by the flanges of the wheels coming in contact with them on the curves, as is the case with the stiff or rigid axle, which not only destroys the rail but puts a constant strain upon the wheel and axle, causing the wheel on the inner rail to trip or revolve upon the rail under the weight of the car and its load, while the opposite wheel is traversing its greater distance; the tendency of which, is to wear the wheel flat, and cause it, or the axle, to break sooner or later. There is less danger of the car leaving the track from its having become sprend.

Axles fitted in this way do not require to be near so large, and yet contain more strength than the common axle, for the reason that the liberty given to the wheels, which allows them to accommodate themselves to the curvatures of the road, removes wholly the strain thrown upon the ordinary axle; and therefore, it requires no more strength of iron at any point between the wheels, than is contained in the bearings, which in the ordinary axle, is not more than one-third of the strength of the other portions of the axle.

The elongated bearing which forms the connection is so proportioned as not to wedge or become tight in the alloy, the wear being almost imperceptible, requiring to be set up not oftener than once in twelve months, by a slight tightening of the screw nuts. If, from long service, the alloy becomes worn out, it can be refi'led, making it as perfect as when first filled up, and the gauge of the wheels will never become changed so as to injure the running of the car.

It is after a series of the most careful experiments, conducted through a period of time sufficient to test in the most satisfactory manner, the real merits of divided car axles, and a thorough and practical test in real service of over two years, that we now offer to Railroad Companies one that we are assured will give universal satisfaction in its operations, and both simple and cheap in its construction.

We are now ready to dispose of rights to use the above axle on the following terms: We guarantee full and perfect satisfaction by giving ample time to thoroughly test its merits, and will require no payment to be made until such satisfaction has been given. All applications to be made to

SAMUEL L. DENNEY,

TYLER DAVIDSON & CO.,

Agents for the

BOSTON BELTING COMPANY

India Rubber Machine Belting in any quantity, from 2 to 20 inches.

India Rubber Steam Packing;

Mixed	do	do	1-32 to ¼ inch thick.
Plain	do	do	1-32 to 1 inch thick.
Pure	do	do	

Pipe and Manhole Rings, all sizes;
Square or Rope Packing, do.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agent of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.

2d, They are a great deal cheaper.

3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations. This is a new and important inveution. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the COLDEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils,—10 casks, assorted weights n w in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Leland's Superior C. S. Car and Auger Bitts.—All sizes.

Brass Kettles, and Sheet Brass, &c.—Brass Kettles, assorted from 6 to 30; Sheet Brass assorted from No. 0 to 30; Brass Wire, do do do.

Star Breast Chains.—Four casks of those superior double-linked Chains, just received.

Walker's Trace Chains.—70 casks of those superior goods, warranted full length and sizes, 8 to 20 links, straight and twisted, now in store.

American Anvils.—Eagle brand, faced with with cast steel, and warranted by the manufacturers equal to Armitage's Mousehole.

Plated Spoons.—Plain, tipped, and threaded heavy plate, on best quality of German Silver.

Premium Gimlet Screws.—10,000 gross just received.

Mill Saws. Hoe & Co.'s C. S. Wm. Rowland's, and W. H. Rowland's 6, 6½, 7, 7½, and 8 ft

Cross Cut Saws.—Hoe & Co.'s C. S., John ockerell's C. S. and G. S., Wm. Rowland's and W. & H. Rowland's 5, 5½, 6, 6½, 7, 7½, and 8 feet Also, 4 and 4½ feet Tennon Saws.

Axes—1000 doz. Axes, assorted Yankee and Kentucky patterns, first, second, and third quality

Nails.—4000 kegs Shoenberger's and Wheeling Nails, now in store.

NOTICE TO CONTRACTORS.
Mobile and Girard Railroad.

SEALED PROPOSALS will be received by the undersigned at this office, until the first day of December, for the Clearing, Gradnation, Track-Laying, together with the building of all Bridges and Culverts of the Western Division of the Mobile and Girard Railroad, extending from Mobile to Greenvile, covering a distance of 130 miles.

The work will gonerally be divided into one mile sections, and bids may be made for one or more of these sections. Separate proposals are desired for the Track-laying, building of Bridges and Culverts, likewise for the building of the Trestle-work, 5½ miles in length, across the Tensas and Mobile Rivers, with the intervening swamps. The trestle-work will be 12 feet high, built upon Black Cypress Piles, found in abundance and adjacent to the line; the two rivers will be crossed with the common Pile Bridging with Truss Pivot Draw in the center of each.

Specifications with the form of the contract and proposals can be had of the undersigned upon application.

Plans, profiles and estimates of that portion of the line are now ready for examination. Parties proposing will please designate it as such upon the envelope.

The country is healthy, with no swamps after leaving the Tensas River. From Mobile to the river, 18.5 miles the grading is light and country very healthy at all seasons of the year. After the line leaves the Tensas River, it passes through, and on the ridge that divides the Alabama and Conecuh waters, easy of access by the Alabama River, and through a section of country well stocked with provisions.

Payments will be made one-third (⅓) in current funds, one-third in the capital stock of the Company, bearing (.08) per cent. interest payable in stock, until the road is completed, then to cease and become common stock of the road, and relying upon the earnings of the same for dividends; the balance (⅓) one-third to be paid in the (.08) per cent. convertible bonds of the Company, maturing in (5) or more years, at the option of the contractors, coupons payable semi-annually either in Columbus, Ga., Mobile, Ala., or at New York, at the option of the holder.

To bidders personally unknown to the undersigned, bond and approved security will be required to an amount not exceeding (⅓) the amount of the contract, for the timely and faithful completion of the same.

22½ miles of the road from Girard west, will be open for business the first of November, and 52 miles 9 months therefrom; it is the intention to have the entire line of 245 miles open for business early in 1858.

Sept. 28, 1854-9t. GEO. S. RUNEY.

Baltimore & Ohio Railroad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was opened to the Ohio River in the spring of 1853, and has already established a high character with the business community of the West. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of the country through which it runs, and its many admirable provisions for the expedition, comfort and safety of travelers, it has received such favor as a passenger road, (with its present connections,) as to show that it will become the preferred roate for all portions of the West and South-West as soon as its further connections are formed by the completion of the Central Ohio, North-Western Virginia and other Railroads now rapidly finishing.

FOR PASSENGERS BY THIS ROUTE,

Through Tickets from all Parts of the West,

ARE NOW SOLD IN

Cincinnati, Louisville, Madison, Indianapolis, St. Louis, Chicago, Toledo, Detroit, Cleveland, Columbus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED

For Sending Travelers Direct to WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION

The fullest accommodations are provided. In motive power and Cars, the company has abundant resources, which are being farther extended to meet the demands of Western Trade. In the dispatch and regularity of transpart, and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road connects directly in the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,

The numerous Steamers of the Parker Vein Line to New York and Boston, the Ericsson Steamers by Canal to Philadelphia and New York, And various other Lines of Steamers and Sailing Vessels to the Eastern Ports, and to Richmond, Norfolk, Charleston, Savannah, etc.

J. B. FORD is the Company's Receiving Agent at Wheeling.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in

AXLE BOXES.

The first cost and "fitting np" of these boxes is 20 to 25 per cent below that of most hoxes in nse. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by scvere service. The Resevoir is held close to the shaft, and the oil jonrnals, arc secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with these hoxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other hoxes are used.

The husiness of a railroad can he done with a much less number of cars, with these boxes than if any other kind aro used.

The first railroad men in the conntry have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

Models and Testimony of the ahove Boxes, may he examined, and arrangements may he made for the right to use the same, with the snbscriher.

DESCRIPTION OF PLAN.

Fig. 1, of the above cut, represents the foundations, consisting of *Bank* and *Track Walls*, the latter made of cut, the former of hammer-dressed stone, with cut stone coping. The Track is bent of the ordinary T rail, spiked and leaded to the stone track walls. The Center Pier is made of cut stone, with a step for screw and pivot bolted to the same.

Fig. 2, shows the framing.

Fig. 3, is a side view of Main Truss, with the mode of gearing, including the mitre-wheels, iron crank frame, rack and pinion, foundations, pivot wheels and pedestals.

Fig. 4, gives a perspective view of rim, segments, decking, etc.

Fig. 5, is an end view of the main trucks, with pedestals and wheels.

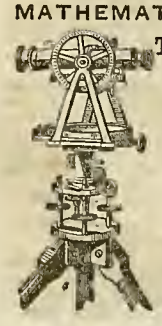

Fig. 6, is a screw for pivot, 6 inches in diameter, working in a steel step through a nut for adjustment.

Fig. 7, shows a cross section of track wall, well, and pedestal.

THE EDITOR'S PEN AND PENCIL.

Messrs. Applegate and Co., of this city, have manufactured a steel pen, called the "Editor's Pen;" and also a "Pencil." We have tried them both, and can say, from experience, that they are most excellent of their kind. The steel pen is, we think, the best we have ever written with, being the nearest approach to a good quill pen.

Census and Statistics of Arkansas.

The State of Arkansas has just completed a census of the state for 1854. The following is the result, as compared with 1850:

	1854.	1850.
Population	253,117	209,887
Whites	199,224	162,189
Slaves	60,279	47,100
Free colored	614	608
Lands cultivated	857,180 acres	781,530
Cotton produced	160,779 bales	65,344
Corn (1853)	11,536,969 bushels	8,893,939
Wheat "	332,535 "	199,639
Oats "	1,040,206 "	656,283

It appears from this, that the increase was as follows, viz.:

Increase of population	21 per cent.
Increase of whites	20 "
" of slaves	27 "
" of lands cultivated	16 "
" of cotton produced	150 "
" of wheat "	130 "
" of oats "	50 "
" of corn "	50 "

It appears evident from this, that the State of Arkansas is growing with great rapidity; but, as the *extent* of lands cultivated does not correspond with the *amount* produced, (in income,) it is also plain, that the land is better cultivated, more labor put upon it; and this also appears from the increase of slaves being greater than the increase of whites.

The State of Arkansas has nearly 5,000,000 of acres of swamp lands, which the Governor proposes to give partly to *levee* the Mississippi and Red River, and partly to railways.

He commends the interests of the Fulton and Cairo railroad company to the legislature. This company has a huge grant of land from the government of the United States, and has already had the route surveyed.

THE MISSISSIPPI AND PACIFIC RAILROAD COMPANY.

Our readers, in common with most people in the United States, have no doubt been amused with the ridicule, which it has pleased a large portion of the press to pour upon the scheme of a New York company, of whom Messrs. Chatfield and R. J. Walker were the principal agents, to construct the Pacific railway through Texas. If the company be successful, however, this ridicule is worthless, and the projectors will receive the praise of the public, and enrich themselves. It is precisely one of those things, of which *success* is the test of merit. No man can doubt, that a railway to the Pacific, whether through Texas or on any other route, is a thing much to be desired, and will be exceedingly valuable. No man can doubt that Texas has a right to give her wild lands for the accomplishment of that object; nor can there be the least doubt that if she does accomplish it, she will be amply repaid, and will have taken one step in advance of the rest of the Union. Finally, no one can doubt, that any company of men, (who can do it,) have a right to avail themselves, if they can, of such advantages as Texas offers for that purpose. Well, then, if this be so, (and we presume neither of these propositions can be denied,) where is the humbug? And with what show of intelligence or fairness is such complaint made of men who have simply availed themselves of the laws of the land in an attempt to enrich themselves, and serve the public?

If any complaint is to be made, it should be made against the legislature of Texas, who have offered immense grants of lands to various companies, if they will construct the railways for which they are given. But, is Texas unwise in this policy? Not at all. She has no access to markets, and no credit to borrow money; but she has immense territory, and an immense quantity of wild land. Is she not wise to give these lands for railways, which will quadruple the value of all the land in her state, and bring wealth and commerce to her doors? The Government of the U. States, with a folly utterly unworthy of our times, has rejected all plans, in all forms, to construct a great Pacific railway, from the Kansas to Francisco, (the only route on which it *ought* to be made;) and what remains to be done? Texas steps in, and offers the world her public lands—a great bribe and a solid one—to any parties who will make the Pacific railway through her state. Is she not right! Is she not much wiser than the Government of the United States, in its cold and ungenerous neglect of this great enterprise?

She *is* wise, and the only question about it, is whether the work *can be done, in this manner*. All the ridicule excited, we suppose, amounts to this, and no more—that the parties who cry humbug, believe the plan will not succeed, and therefore they are at liberty to laugh at those who have undertaken so much. This leads us to the only real question there is about it. *Can* this railway to the Pacific be constructed with lands? Are the Mississippi and Pacific company *legally organized*, and authorized to go on, under the charter? And will they be *able* to make the road? We propose briefly to examine the question, and furnish all the *facts* we have.

We shall not ask how the road is to be constructed through California, from the Rio Grande; for it is well understood that California, like Texas, has offered, or is ready to offer, (by law,) her lands for the construction of the road through her territory. The only question in the whole enterprise, is whether the Pacific railway *can be constructed, by this company, from the Sabine to the Rio Grande*?

To determine this, we state the following *facts:*

1. In February, 1853, the Legislature of Texas incorporated the "MISSISSIPPI AND PACIFIC RAILROAD COMPANY." The important provisions of the charter are these:

2. The road is to run from the eastern boundary of Texas, from a point not north of the town of Fulton, Arkansas; to cross the rivers Trinity, Brazos, and Colorado, as near as practicable on the 32° of north latitude, and terminate at or near the town of El Paso, on the Rio Grande.

3. To enable any company to do this work, the state of Texas has granted *twenty sections* of land (12,800 acres) per mile; and that the company may certainly get these lands, the state has reserved all the lands east of the 103rd degree of longitude, and between the parallels of the 31st and 33d degrees, *till the road is located*. After that, 30 miles on each side of the road are reserved.

4. To insure the performance of the work by the Company, it is required that $300,000 be deposited with the Treasurer of State; that 50 miles be completed by January, 1856, and after that, 100 miles each year; and, finally, the road track is to be 300 feet wide.

Now, let us see whether it be practicable, or not, to make this road on these terms. On the 31st of October, (it is stated in the newspapers,) Messrs. Walker and Co. deposited stocks with the Treasurer of State, which were certified to be worth $300,000. They were accepted by the Treasurer; which confirmed the charter to the company. If this be so, then the next question is, can the road be constructed? If it were required at this time to raise an immense sum of money, we should say, it could not be done. But it is not necessary, and the work can be constructed with a small advance of money, and the judicious management of lands. What are the means of the company, and what will be the cost of the road?

1. The road from the eastern boundary of the state to El Paso will be, (exclusive of branches,) about 750 miles in length, which gives about *ten millions of acres of land for the construction.*

2. What is the value of this land? If this were left in a wilderness state, it might not be worth even a dollar an acre. But when we reflect that Texas is rapidly filling up with immigrants, and that this railway will he a highway for them, it is most evident, (from railway experience,) that these lands cannot, with any reference to past history, be put at less than an average of $3.00 per acre. It is true, the company will be obliged to sell them slowly, and judiciously; but the result is certain. The State of Texas has, therefore, actually given *thirty millions of dollars* to this company, provided it fulfils the conditions of the charter.

3. What is required in construction, and what will be the cost? The road must he constructed as follows:

In 1855	50 miles.
In 1856	100 "
In 1857	100 "
In 1858	100 "
In 1859	100 "
In 1860	100 "
In 1861	100 "
In 1862	100 "

The company have, therefore, *eight years* in which to construct this railway. The cost will be about $30,000 per mile, (not more,) with all its machinery and equipments complete; for the most part of the ground will furnish easy grades.

4. What is to prevent this, or any company, from constructing the road on these conditions? Is not the stock worth a premium, without one cent paid on it? The account will stand thus:

Ultimate value of lands	$30,000,000
Cost of construction	22,500,000
Surplus	$7,500,000

On the supposition that interest, contingencies, etc., consume all the surplus, is it not plain that Texas has really furnished the whole capital to construct the road? She *intended* to do so. She did it with her eyes open; for the people of Texas would rather give away the public lands than go without markets and the means of commerce. They are entirely safe in the contract, for they give lands only as the road is made.

5. But, it may be said, money is required, and how can it he got. But a little money is required. Such is the probable value of the stock, *if the road be made*, that a large part of the work can he paid for in stock. Now for the money required, thus:

50 miles in 1855	$1,500,000
One-third by contractors	500,000
Required	$1,000,000

Now, the stock of the company, with a view of constructing the road entirely to the Pacific, is $100,000,000; and an *assessment of one per cent.* will furnish a million of dollars; and that is enough. But the public have been informed that the stockholders are men of straw, and cannot pay. Let that he as it may, it is certain that such an assessment as 1 per cent. will require but *ten dollars* in money on each $1000, and there are few who cannot pay that; or, if the present holders cannot, the world at large, under such conditions, will be willing enough to take it, and pay the assessments. Five millions of dollars raised from the stockholders would be but *fifty dollars on each thousand.* After that, its immense landed estate will hring the required capital, whether by mortgage or sale, in any part of the world.

Such are the facts of the case, and such is the light in which they appear to us. We have taken it for granted, that the company organized as the "Mississippi and Pacific Railroad Company," have secured the charter in the manner stated in the papers. If they have not, the charter may be forfeited as to them. But if they have secured the valuable privileges conferred by that charter, we do not see why they should fail in the construction of the road; and if it be constructed, we must regard it as a great public gain, and a great speculation to the company. The duty of constructing such a work, in some suitable place, was the duty of the national government. But if the government neglects and scorns its glorious opportunities, who can blame states and individuals if they endeavor to seize this great prize of profit and renown!

Strike among the Employees of the Mad River Railroad.

We learn from a publication in the *Bay City Mirror, Sandusky*, that the operatives of the Mad River and Lake Erie Railroad are at present on a strike. These unfortunate occurrences have been too much in vogue during the last few years. We said *unfortunate*, because in times of abundance and activity, both the employer and the employed suffer alike inconvenience to an extent often much greater than the duration of the difficulty. The employer loses business, and the discontented workmen not only lose wages for themselves, but compel even those willing to work to lose with them. But upon a railroad it is not merely these two parties who are made losers by the differences which arise between them, there is another and larger class of sufferers. We mean the merchant who has goods upon the line, and is delayed in the receipt of them, and the traveler, whose movements depend on the trains. Here then, an evil, having its origin in local difficulties, spreads its effects over wide spaces of country, and parties who are entirely innocent of all participation in the discussion. We doubt very much the right of any class of men to interfere with the rights of others in no wise injuring them, and whose interests depend on the harmonious working of a line of railroad; and viewed in this light, we believe that even the "strikers" will be willing to concede that in so far as they extend inconvenience to innocent parties, they are clearly in the wrong.

In this particular case, we can only judge, from the published card of the operatives, what the real hasis of the difficulty is. In their card they state that their wages were already low, and that "after consultation and a dispassionate review of the circumstances which compelled the railroad to demand the deduction, they came to the conclusion to work for no less than the wages paid during the summer."

Every man has an undoubted right to estimate his own services at whatever rate he chooses, and those who need them also have the right to name for these services the amount they conceive themselves able and willing to pay. So far then the company have the right to fix the wages they will give, and the operatives the right to accept or reject these rates. But, in cases of declining business and the difficulties which now meet those who have to use large sums of money, we doubt the right of the operatives to institute a "strike." There are other far more effective means of curing the evil. The quiet withdrawal of a good mechanic or a number of efficient workmen, because they can do better elsewhere, is far more likely to produce the desired result than the stopping of business and the excited feelings consequent upon a "workmen's strike.

We regret the occurrences on the Mad River road, and hope they may yet be amicably arranged. Both parties have an interest at stake, which, in the trying season before them, they will be compelled to feel.

South Side Railroad, Virginia.

We learn, from a communication to the Petersburg Express, that this road is now completed to its connection at Lynchburgh with the Virginia and Tennessee Railroad, which was announced some time ago as running to within four miles of Wytheville. This brings the people of the southern counties of Virginia and the valley between the Blue Ridge and the Alleghany within a few hours' ride of tide water, at the head of the estuary of James River, or by means of the finished portion of the Richmond and Danville Railroap to Richmond, the Metropolis of the "Old Dominion." We congratulate the people of Lynchburgh and the Valley on the completion of this part of their route, and hope that hefore many years, through the western connections of this road, they will be able to breakfast at home aud take a friendly cup of tea in Cincinnati.

Railroads.

REPORT ON THE CAIRO & FULTON R. R., IN ARKANSAS.

We have received the report of the President and Engineer of this road, made to the Directors in October last, on the preliminary surveys. It will be remembered that this road, starting at a point opposite Cairo, is designed to cross Arkansas through Little Rock, and strike the Texas boundary at Fulton, connecting with the great Texas Pacific line through El Paso. When these intentions are carried out, the Cairo and Fulton road will become one of the great avenues of trade between the Atlantic and Pacific; and passing through a healthy and fertile region, cannot fail to give rise to a local travel of no small extent.

The company was organized April 13, 1853, and on May 15, a Board of Directors was elected by the stockholders, in which one Director was chosen in each county through which the road would pass, or which was contiguous to it, where an eligible stockholder resided. The first object which engaged the attention of the Board, was to provide means for a survey of the route of the road. Agents were immediately appointed, and books of subscription opened along the proposed line. The enterprise met with much favor, and influential citizens at once devoted their time and energies to promoting its interests.

About the middle of August, Thomas S. O'Sullivan, Esq., was appointed Consulting Engineer of the road, and, at his suggestion, Jas. S. Williams was appointed Acting Chief Engineer. An outfit, consisting of instruments and other necessary articles, was provided, and two field parties organized; and the work of surveying commenced in January; one party taking the route from Little Rock to the Missouri line, and the other from Little Rock to the Texas boundary.

A favorable route has been obtained and located, and careful estimates of cost made. The road, as located, commencing at the Missouri line, will run southwest to the head of Village creek, 55½ miles, in one straight line; thence to Grand Glaize and to Prospect Bluff, on Little Red River; from Prospect Bluff to the Arkansas, five miles northeast of Little Rock, is one unbroken straight line, 54½ miles long; crossing the Arkansas at Little Rock, it pursues the same direction across the Saline, Ouachita, Little Missouri, to the northern border of the Red River bottoms, to Fulton.

The greater portion of the northern division is very favorable, requiring little grading beyond that which accompanies the necessary ditching, which will in many instances benefit the land for miles by affording good drainage. The southern portion affords more grading in crossing the water sheds of the different streams, but is not a difficult route. There is no grade in the whole line of more than 52.8 feet per mile, and no curve of less radius than 5730 feet; the usual radius being 11,460 feet. The excess of length over absolute straight lines joining Little Rock with its extreme points, is very small. The distance from the Missouri line to Little Rock, in an air line, is 160.6 miles; by the survey it is 161.7 miles. The distance from Little Rock to the Texas line, in a straight line, is 134.1 miles; by the survey, 139.35 miles.

The company have obtained the right of way, with but few exceptions, the entire distance from Missouri to Texas, granted gratuitously and cheerfully over lands owned by individuals; and the charter confers the right over lands owned by the state.

The plan of construction is for a first class road, single track, with turn outs, 1000 feet long, 10 miles apart. The masonry of the bridges will be of heavy rock work, the beds and joints dressed, and faces rough, laid in hydraulic cement up to high-water mark, and above that with lime mortar, pointed with cement. The guage is fixed at five feet six inches, as corresponding with the guage of the roads in Missouri, Texas, and Louisiana west of the Mississippi. The road will be well ballasted and laid with T rail, weighing 63.37 lbs. to the yard, or 100 tons to the mile. The chairs of wrought iron.

In the following summary of the estimates of the Engineer, ample provision is made for depots and other buildings, locomotives, and various classes of cars, to constitute a well-equipped road:

SUMMARY OF ESTIMATES.

Total grading, masonry, and bridging, 301 miles, average per mile, $7,241	$2,179,488
301 miles track	2,950,867
Road, bed, and track, 301 miles	$5,130,456
" " " per mile, $17,045.	
Depots, water stations, turn outs	$191,400
Locomotive engines	288,000
Cars	218,800
Engineering and contingencies	245,146
Total cost of road, complete	$6,373,802
Average cost per mile, $21,175.	

The Board accepted and approved the report of which we have given a brief summary; and directed the President to advise the Governor, that the company were ready to select, at their own expense, the lands granted to the state in aid of the construction of the road; but as the General Assembly was to meet at an early day in regular session, they desired the sanction of their labors thus far by the representatives of the people before proceeding farther.

The Board of Directors elected in May last is as follows: Roswell Beebe, President; Daniel Rings, Vice-President; S. W. Neely, Edward Cross, Henry K. Hardy, Robert Martin, Green B. Hughes, Henry C. Dye, James Robinson, Thomas Hough, James Russell, and Israel M. Moore; William B. Wait, Treasurer; B. C. Harby, Secretary; Jas. S. Williams, Chief Engineer.

The Executive Committee is, Daniel Ringo, Green B. Hughes, and Roswell Beebe.

RAILROADS AT FORT WAYNE.

Fort Wayne, the centre of the contemplated system of railroads in the northern part of Indiana, has only recently been reached by the locomotive. Although the point to which a dozen roads are aiming to arrive, the Ohio and Indiana is the first and only one that is finished and in running order. The people and the press, however, are alive to the importance, to themselves, of active and energetic effort to finish at least a portion of the many promised enterprises.

In reference to the Fort Wayne, Lacon, and Platte Valley R. R., the Fort Wayne Sentinel says: "Notwithstanding the pressure of the money market, there is a fair prospect that the work will be speedily commenced on this great and truly national railroad. Arrangements are in progress, and it is hoped will shortly be consummated, for making a beginning on some portions of the line, which, from their connection with other railroads, can be put in profitable operation until the entire line is completed. The local subscriptions on some of the portions alluded to, are believed to be amply sufficient to prepare the work for the iron. It is the desire of the directors to commence at this end of the line, and make the road to Liberty Mills, 32 miles, or even to Rochester, if the necessary amount of stock can be raised. This portion would do a good business; connecting here with the Ohio and Indiana railroad, it would afford a desirable outlet to the rich and productive regions of Eel River, and bring a large amount of trade to our city.

"What do our citizens say? Shall we have the road? Hitherto they have shown a strange apathy toward this road, but the time has now arrived for them to shake off the lethargy, and act. Let them take such an amount of stock as ought to be expected from so wealthy a city, to a work which will do so much to enrich it, and we will guarantee the construction of the road as rapidly as they can desire."

With regard to the continuation of this road east by the Tiffin and Fort Wayne railroad, a correspondent of the Tribune says, that "the work on this road is progressing, notwithstanding the pressure in the money markets of the East. Forty thousand dollars worth of work has been accomplished since May last, and sixty-eight miles of the line will be ready for the superstructure next spring, leaving thirty-three miles untouched on the western division."

The Fort Wayne and Chicago railroad is also progressing, as we learn from the Warsaw Republican, which says: "The stockholders of this road held a meeting at Fort Wayne, on the 2d inst., for the purpose of electing a Board of Directors for the ensuing year.

"Samuel Hanna, Joseph K. Edgerton, William Williams, P. Hoagland, Henry Swihart, A. L. Wheeler, S. J. Anthony, W. B. Ogden and John Evans, were elected Directors. The new board elected Judge Hanna President."

We learn that it is the intention of the Board to prosecute the work as soon as Spring opens. The work is so far advanced now that the grading may be finished as fast as the track can be laid. If this shall be done, we shall have the road finished to this place by next fall. We would advise those holding stock in this road not to sacrifice any thing on it on account of the present pressure.

Selected Railroad News.

A Commercial and Economical Review of a Railroad to the Pacific.

Speech of Hon. Mr. McDougall, of California.

During the year 1853 there arrived in the port of San Francisco, from the Atlantic ports, 443 vessels with 423,230 tons of merchandise, the merchandise having a value of not less than $100,000,000. Most of these freights arrived by clipper ships, and the average cost of freight was not less than $30 per ton. The average time consumed was about five months. During this time the merchandise was dead capital, and properly chargeable with interest, which call five per cent. It is well understood that the injury and loss not covered by insurance upon almost every article of merchandise that in the course of a long voyage has to pass twice through the tropics, amounts to a very considerable per cent. on its value. Flour, pork, beef, sugar, molasse, cotton and woollen fabrics, clothing, and indeed almost all articles of merchandise, from a variety of causes incident to the voyage, arrive in San Francisco either less in quantity or injured in quality. This loss has been averaged by our most intelligent merchants at seven per cent. on the value of importations.

These charges and losses in the shipment of merchandise, by the way of Cape Horn, may be thus stated:

Insurance on $100,000,000 merchandise at 4 per cent	$4,000,000
Interest on $100,000,000, at 5 per cent	5,000,000
Losses on $100,000,000 merchandise not covered by insurance	7,000,000
Freight on 423,230 tons, at $30	12,696,900
Making an aggregate of	28,696,900

It is estimated, and fairly estimated, that during the past year 110,000 passenger transits were made to and fro between the Atlantic and Western States and the Pacific coast, including travelers by sea and land. The average cost to each has not been less than $250, and the average of time consumed not less than forty days; and if the value of time consumed is estimated at $2 per day, the following statement may be made:

Cost of transit for 110,000 passengers at $250 each	$27,500,000
Time, forty days each, of 110,000 at $2 per day	8,800,000
Making an aggregate of	36,300,000

There is, besides what has been stated, the Isthmus transportations of $60,000,000 of gold dust, and not less than 2,500 tons of other freight. Gold dust pays two per cent. freight and one per cent insurance, and the cost of other freights by the Isthmus route is $500 per ton, making—

Freight on $60,000,000 of Gold dust, at 2 per ct.	$1,200,000
Insurance one per cent.	600,00
Freight on 2,500 tons, besides gold dust, at $500	1,250,000
Making an aggregate of	3,050,000

There still remains the amount paid by the Federal Government for the transportation of its mails, military and naval stores, officers and troops, which I have already estimated at $3,739,000.

If these aggregates be taken together, we have—

Charges and loss on merchandise by Cape Horn	$27,696,900
Charges and time of passenger transit	36,300,000
Isthmus freights	3,050,000
Government transportation	3,739,000
In all	70,785,900

This enormous amount is the tax now paid by the people of the United States for transportation and travel between the Atlantic and the Pacific; and it is to be considered, sir, that this is not a burden assessed alone upon the people of California. It is a burden upon the people and a tax upon the industry and enterprise of the people of every State and upon all classes of our citizens.

I will now compare the amount thus charged upon the country with the amount of charge and loss in doing the same business and transporting the same number of passengers by railroad.

A railroad of 3,000 miles in length would connect any one of the Atlantic cities with San Francisco. I will first inquire into the cost of carrying freight per ton over this line.

A single engine will draw 100 tons in addition to the cars. In *Hunts' Merchants' Magazine*, of July last, are tables taken from the *American Railway Times*, said to be prepared by one of the most experienced and intelligent managers, and from those tables it appears that the cost of running a full train of cars is but 33 cents per mile, or $990 for 3,000 miles, which makes the entire cost of transportation to the proprietors of a road but $9 90 per ton from the Atlantic to San Francisco. The same article states that the Reading road carries coal 100 miles for $1 per ton, although the cars go back empty, and that the cost of the round trip of 200 miles is but 38 cents per ton. It also states that the Baltimore and Ohio road carries coal 200 miles at $2 per ton.

I am informed, as a general rule, when the income of a road is 100 per cent. greater than the running expenses, it is a paying road. I also understand that the expenses of a road are diminished in proportion to the amount of its business and the length of its line. If this be so, merchandize can be transported from the Atlantic to San Francisco at $19 80 per ton—a sum much less than what is now charged for ocean transportation. But, assuming the charge upon this long and continuous line the same now charged on the Reading and the Baltimore and Ohio roads, which is over 200 per cent. on the running cost of the road, I will proceed to state the charges and loss upon the amount of business between the termini.

There will be no damage to merchandise by exposure or climate, and insurance will be merely nominal. The time of transit need not be more than ten days. Passengers would not pay more than $50 each on an average, departing from their various points. Gold dust would go as freight, with an additional charge for its protection, and the amount of that would be about 125 tons per annum. Assume the cost of that item at $300 per ton, and the statement can be made as follows:

Cost of transportation of merchandise, 425,730 tons, at $30	$12,771,900
Interest ten days on merchandise, ½ per ct. on $100,000,000	333,000
125 tons gold dust, at $300 per ton	37,500
110,000 passengers, at $50 each	5,500,000
Ten days' time of passengers, at $2 pr. diem	2,200,000
Government transportation, 2,000 miles at $600 per mile	1,200,000
Making an aggregate of	$22,042,400

The road would be thus receiving $19,471,900 for passengers and freights—full 20 per cent. on its cost, and more than sufficient to support it with present trade and travel, and, at the same time, making a clear saving to the country of forty-eight million seven hundred and forty-three thousand five hundred dollars.

These figures may seem extravagant; but, extravagant as they may appear, they fall within the truth. If they are questioned, I ask whoever questions to correct them.

Now, sir, I wish it understood by this committee, and I wish it understood by the country, that the want of a railroad to the Pacific is a loss to the country of a sum sufficient to support the whole machinery of the Federal Government—a sum sufficient in two years to build the best double track railroad in the world all the way from the Mississippi to San Fraucisco. And I wish it further understood that, apart from the political importance of our pacific possessions; apart from all questions of political necessity; apart from the illimitable promises of the future, as a present fact, the present commercial and economical interests of the country demand the construction of the road.

I will go further; I feel that I am justified in going further, and asserting that it is not only demanded by the *interests*, but is demanded by the *people* of the country. I will even take issue with some of my honorable friends from Virginia, and insist that it is demanded by their people. Upon this subject the country has already been aroused; concerning its merits they have already become intelligent; from every cabin of the West from every workshop in the North, from every precinct and village in the South, the deliberations of this body upon this subject are being watched, watched earnestly; and I assure you, sir, if we fail or refuse to act now, there will be those placed in our stead more prompt and ready for the work.

Raleigh and Gaston Railroad Company.—The annual meeting of this company was held at Raleigh, N. C., a few days ago. The entire receipts of the company for the year ending 30th September, 1854, have been $238,410 21. The entire expenditures on all accounts, including dividends, were $159,701 97, leaving $78,708 24. The receipts from freight, passengers and mails were $173,923 77, and the current expenses $70,530 96, showing a profit on the year's business of $103,302 81—or over 10½ per cent.

Miscellaneous.

VISITS IN THE NEIGHBORHOOD.

Tired of newspapers and the scissors, we made a flying visit the other day to the capital of our neighbor state, "the Railroad City." Our ride of twenty miles, over the great "broad guage," was full of interest. This magnificent enterprise, which is destined in a measure to annihilate the tyranny which the caprice of our river has always exercised over our business community, is now one of the facts of the age. The hard breathing of the steamer is surpassed in its course, by the "snorting of the iron horse;" and experience will soon demonstrate here, as it has in New York, that the railroad can be a successful competitor for the commerce of the *middle*—no longer *western*—basin of the country. But to the traveler, the scenery of the "broad guage" is not without its interest; and that interest so readily excited by the beauties of nature, mingled with the recollections of the past, cannot fail to interest and profit even the careless observer. As you sweep along over the broad foundation, you observe our noble river to the left, skirted by the varying shores of Kentucky, and to the right the towering hills of Ohio, clad in vines, and lined with residences, where refinement and cultivation have lent charms to the already beautiful scene; but, mingled with the tasteful modern mansions, the giant youth of the land is forced on your thoughts by the rustic cottage and the rude log hut of the early settler. Hardly has the hardy pioneer rested from his labors, before the hand of taste arranges in beauty the newly subdued fields.

We have seen the Hudson, with its majestic palisades; we have read of the chain stretched over its waters at West Point, and have seen the spot whence it was suspended; but the tale of the early struggles of the settler, was one of distant days, and the boarded huts of the fisherman told only of times much like our own. But here, on the Ohio, with the actual cabin of the woodsman before our eyes, the trials and sufferings of border life are "no tale that is told;" they are no creatures of the dreamy past, enveloped in the mists of tradition; they are parts of a living history, of which our own age must form a portion. They are as widely different from older history, as the landscape lighted with the golden sunshine, from the same scene, amid the haze and clouds of the Autumn storm.

But here, at Lawrenceburg, we change cars, and with it change the scene. To escape from the valley of the river, we wind along the banks of a beautiful stream; now on our right, and now on our left; here sweeping round the base of a noble hill, and there skirting the streamlet, and watching the old trees whose spreading roots are partly bared by the washing water. There is a pleasing contrast between the villaed hills of the Ohio, and the native grace and elegance of the streamlet; the one tells of progress, and the other of retirement; in the one is pictured social enjoyment, and in the other we see a fitting scene for the reflections of the lonely—a scene which a Harvey might have hallowed with his meditations.

But we are dashing on, and soon leave the little streamlet, and gain the open country; the road becomes more straight, and the rich culture of the cleared fields of Indiana soon occupy our thoughts with the resources for abundance and prosperity that they afford to their possessors. The past year has been one of disappointment to agricultural interests all over the land; and this region, like every other, has suffered its share of loss; but we could not fail to remark that the business of the road was in a prosperous condition, and that there was ample material to extend and enlarge to an indefinite extent; stretching far to the west on the line of the road, for 30 or 40 miles below its middle course, are forests of valuable timber, which must, sooner or later, find a market in Cincinnati. There are already ten or twelve saw mills on the line, some of which run night and day; and more must be put in operation. And here, at a point comparatively near to Cincinnati, are valuable quarries of excellent building stone, material which is only waiting for a uniform guage to bring it into our market on favorable terms—terms which will enable it to compete with any of our favored building material. Add to this, the average surplus products of the region, which peculiarly belongs to this road, and its fair share of the through business of the great Northwest, with the local travel, and pleasure-seekers, attracted by the beauties of its natural scenery; and we may safely compute, that this will be a paying road.

New Metals eor Machinery.—Mr. J. P. Kingston, Lewisham road, Kent, has patented the combination of tin, copper, and mercury, and using the same as bearings, or linings of bearings, and for packings for machinery. In carrying out this invention, the patentee melts (say) about 9 lbs. of copper, and adds thereto 24 lbs. of tin. This combination he allows to cool, and again melts it, and then adds 108 lbs. of tin; and when the tin is melted, he adds 9 lbs. of mercury, and then allows the whole to cool. The patentee remarks, that he does not confine himself to the precise quantities of the above metals given, but believes them to produce the best compound for the purposes of the invention. The compound metal, thus produced, is to be made into bearings, if for light machinery, by forming it, when re-melted, into moulds of the proper forms; and when making packings of machinery, the melted metal is run into the space to be packed, as has heretofore been done with other soft metal, taking care that the surfaces to which the packing is not desired to adhere, are covered with smoke or other proper material, as is well understood. When lining bearings, the surfaces of the boxes or bearings (where the lining is to adhere) are first to be tinned, and the melted metal is then run; cores and moulds being used when necessary, as has heretofore been practised. The patentee claims the combining mercury with tin and copper in the manufacture of bearings and packings for machiuery.—*Am. Railway Times.*

"New York, Nov. 2, 1854.

Gentlemen:—In the suit for foreclosure of the first mortgage bonds of the Buffalo and New York City Railroad Company, dated November 1, 1852, the defendants tendered the interest due in May last, and taxable costs, which I refused to accept. The Court thereupon, on their application and after argument, ordered that upon bringing the sum tendered into Court, and paying such taxable costs, or paying the same to my attorney, the suit should be stopped as to that mortgage.

I have thereupon received - - -		$17,500
This is subject to the counsel fees incurred, not chargeable to the defendants of - - - -	$350	
To my statutery commissions	275—	625
Balance - - - - - - - - - -		$16,875

Divided among 500 coupons, gives to each coupon $33 75, at which rate, on presenting the coupons, you will receive the amounts.

Your obedient servant,

John A. Stevens, Trustee."

LOCOMOTIVE FOR BURNING ANTHRACITE COAL.

Important to the Coal Trade — Anthracite Coal for Locomotives. — The New Bedford Mercury gives an interesting account of an experiment which has recently been made under the direction of William A. Crocker, president of the Taunton Branch railroad, and S. M. Felton, president of the Philadelphia and Baltimore railroad, for the purpose of thoroughly testing the feasibility of using anthracite coal in locomotives. For this purpose they had an engine built at Taunton, in the most thorough manner, and it has been run for about two months on the Taunton and New Bedford railroad, without losing a minute in time. It was then taken to the Worcester and Western roads, for further experiment. On the first trial on the Worcester road, toward the conclusion of the trip, owing to the want of skill in the fireman, the engine was behind time at Worcester, but then rallied, and went over the Western road to Springfield, losing only nine minutes.

The engine then ran for several days between Springfield and Worcester, taking the usual heavy freight trains. On the 13th October it ran from Springfield to Worcester, taking the accommodation train, and arrived in good time, making an average of 28.6 miles per hour. On the same day, returning, it took the Albany express train to Springfield in 1 hour and 18 3-4 minutes, averaging 42 miles per hour. As a further specimen of its performances, the Mercury states that it ran over a heavy continuous grade of eleven miles on the Western railroad, taking it in 17 minutes, and having 100 lbs. of steam upon the summit. Of the peculiarity in the construction of this engine, and the economy in its use, the Mercury says:

The peculiarity of this locomotive consists in the construction of the boiler. To state

this plainly, we may say that the water comes to the fire, instead of the fire going to the water. This passes through the tubes, instead of the fire, as in locomotives of the old construction, and is eontinually circulating about the fire box. In this way, a moderate combustion generates the necessary amount of steam, and the fire box not being subjected to that violent heat which has been the real difficulty with other engines for burning anthracite, is preserved, while it has been burned out in all other engines in a few weeks.

"The economy of anthracite engines is now in process of proof by parties interested, and the result will doubtless be given to the public. Mr. Cummings, the engineer of the Anthracite, informs us, that for its day's work, of eighty-four miles, it requires 3500 lbs. of coal being kept standing upon its fire about two hours and a half in New Bedford.

"Besides economy, there are several other eonsiderations which should recommend the coal engines. Smoke, dust, and cinders are all avoided. This not only adds greatly to the comfort of the passengers, but wood standing upon land adjacent to the road is not in danger of fire, which in dry weather is often communicated by sparks from the ordinary engine.

"The trial of this locomotive has thus far been perfectly successful, and we hope the experiments of the enterprising projectors will hereafter be equally satisfactory. The question which they have undertaken to solve is a highly important one. The coal north of the Alleghanies does not yield a coke which can be used for locomotives, and the English coke, if imported, soon spoils by age. But while wood grows dearer, with increased consumption, the reverse is true of anthracite coal, the supply of which is inexhaustible. Its successful introduction will be a benefit to the public in lower fares, and to corporations in increased profits."

THE USE OF THE BLOWPIPE BY WORKING MINERS.

The miner will commonly judge a mineral to be metallic, if it has a metallic aspect, not destroyed by scraping, or if it feels particularly heavy in the hand; but others also discover metallic properties to the blowpipe by—

1. Yielding a bead of metal to the reducing flame, on charcoal, which is facilitated by the addition of soda.
2. Passing off in vapor more or less dense.
3. Attracting the magnetic needle, after heating in the reducing flame, on charcoal.
4. Coloring borax strongly, either on charcoal or pipe clay.

When a metallic bead is produced, it may be pure silver, tin, lead, bismuth, copper, gold, or iron; copper, nickel, or cobalt, alloyed with arsenic, or a mixture of various metals. Gold and silver may be distinguished by not losing their brilliancy in the outer flame; tin by its whiteness and softness; lead and copper are immediately distinguished by their color; and bismuth by fuming and evaporating in the reducing flame. The arsenical alloys and compounds, not clearly distinguished by these means, nor by their streak upon the black flint, must be examined by fluxing with borax. If it give green on pipe-clay, it is copper, though it happened to be bleached by the arsenic. If blue, it is cobalt. If orange-yellow while hot, and the color fly on cooling, it is iron or nickel; and these are distinguished by their reducing flame on charcoal, where the borax bead is bottle-green with iron, but almost colorless with nickel. If the metal yield no bead, but pass off in vapor, it is quicksilver, arsenic, antimony, bismuth, or possibly tellurium, cadmium, or zinc. If the vapor smell strongly of garlic, it is arsenic. If it leave a circular halo on the charcoal, it is antimony, tellurium, bismuth, or cadmium. If the halo be white, it is antimony. If orange-yellow, it is to be subjected to the reducing flame. If it disappear easily, tinging the flame green, it is tellurium. If it evaporate with difficulty, and without tinging the flame, it is bismuth. If it be red or orange-red, it is cadmium. If the mineral evaporate readily with no odor, or only that of sulphur, and without leaving a white or yellow halo, it probably contains quicksilver, which is proved, if, on mixing a portion of it with soda and iron filings, heating it on charcoal, and holding a bit of gold coin on the vapor, the quicksilver show itself on the coin. If, using soda with the reducing flame, the assay burn after a while with a pale green flame and white smoke, eovering the charcoal with a white, flaky powder, it contains zinc. If it will neither yield a bead of metal nor volatilize, but attract the magnetic needle after the operation of the reducing flame, it most probably contains iron, but it may be nickel or cobalt—easily distinguished by fluxing with borax. If the mineral, or the residue, after part has evaporated, will neither yield a bead, volatilize, nor attract the magnetic needle, we have then to flux it with borax, and the following table will show what it coutains :

If it stain the borax,			
In the reducing flame, on charcoal.	In the calcinating flame on pipe clay.	The metal is	Estimation.
Blue	Blue	Cobalt	Valuable for coloring glass, etc.
Bright green	Colorless	Chrome	Valuable for coloring glass, and for coloring paints.
Bottle green	Bluish green; Orange while hot, bleaches in cooling	Copper	Valuable.
Colorless or reddish	As iron	Iron	Of no value unless near coal.
Pale	Yellow	Nickel	Valuable.
Dirty green	Colorless	Uranium	Not used.
Purple	Purple	Titanium	Ditto.
Colorless	Colorless	Manganese	Valuable for bleaching.

Copper is reduced to the metallic state in the reducing flame, and hence, when in quantity, shows itself in its usual red color in the bead.

In mixtures of metals the indications are sometimes ready enough. If on pipe clay, we find the borax tinged between orange and purple while hot, and becoming purple in cooling, while it gives a bottle green on charcoal, we immediately perceive the indications of iron and manganese—a very common mixture. If, again, we find it bright green on pipe clay, and emerald green on charcoal, a mixture of chrome and copper is indicated. But it more frequently happens, that mixtures of metals give ambiguous results, and that they can only be ascertained by caution and perseverance.

Although most of this is sufficiently easy, it requires a little practice, and, to give the operator confidence in his results, this is best performed upon substances which he knows to contain the metals he assays for. Thus, if he operate on common mundic, he is certain, after a sufficient time of roasting and heating on charcoal, to obtain a residuum capable of affecting the magnetic needle. White mundic will leave the same residue, after giving off an arsenical smoke. Green copper (malachite), will be sure to yield a bead of copper on charcoal, and will as certainly produce a fine green with borax on pipe clay. Any of the ores of lead may be promptly reduced to a metallic bead on charcoal.

The vapor of antimony may be promptly distinguished from that of arsenic, by the garlic odor of the latter. A minute particle of manganese will tinge borax a fine purple on pipe clay, in the outer flame; but on charcoal in the blue flame, a much larger portion, dissolved in borax, will become limpid and colorless. A particle of titanium ore will give an opposite result, bleaching on the pipe clay, and becoming purple on the charcoal.

The experimenter should also not fail to reduce tin ore by the aid of soda, and some ore of zinc by the same means, that he may become acquainted with the appearances in these assays. Thus varying his practice as materials happen to fall in his way, he will quickly acquire familiarity with the appearances and results, and feel confidence in any assay he may undertake.

Toledo and Chicago Air Line Road.

This road is now completed to Wauseon a distance of thirty-seven miles, and nearly completed to Stryker, fourteen miles this side of Bryan. Stryker is eight miles from West Unity, and will be the nearest station to that place.

Mr. Fulsom, the contractor, has the use of his part of the road. so far as finished, until next September, and is now running a passeuger train which carries daily forty to fifty passengers each way. The trains make good time for a new road, and the track is quite smooth. At Wauseon, there is a line of stages to West Unity and Bryan. From this city to the Indiana line, 62 miles, the Road is to be an Air Line, and there will be but three curves between this and Goshen.

The country on the line from two or three miles of Toledo to Centreville, (the station near Swanton,) is sandy and not very favorable for cultivation; beyond that it is good. Wauseon, a new town commenced last spring, has a good location, and contains already a good hotel, dry good stores, two groceries and several dwellings. It bids fair to be an important place.

As yet there is no mail upon the road, and one is much wauted for the accommodation of those living beyoud, as well as those liv ing on that portion of the line already comple ted.

CINCINNATI STOCK SALES.

AT THE STOCK BOARD,

MERCHANTS' EXCHANGE

And at Private Sale.

No sales reported.

Monetary and Commercial.

During the week past, the same quiet tone has prevailed in our monied circles; the supplies are inadequate to our necessities, and business men generally seem to have settled down upon the conviction, that they must do the best they can under the circumstances which surround them.

The bank excitement has subsided, and it is altogether probable that some of the suspended houses will be able soon to resume their usual business.

Rates of interest, where transactions are effected, range from 1 to 3 per cent. We quote few transactions: No. 1 paper, from 1 to 1¼ per cent.; good, but less known, at from 1½ to 2 and 3 per cent.

It was hoped, from indications of the weather on Saturday, that a rise would take place in the river, which would enable our manufacturers to ship goods already ordered and ready for shipment. There are estimated to be orders to the amount of one and a half million dollars, much of which would be collected in sight drafts, and afford us an opportune supply of currency. However, as yet the river has not risen to any great extent, and navigation, of course, is still, in a measure, suspended.

Stocks are still dull, prices ranging low; large sacrifices are made by those forced to sell. As our paper this week is issued before the sales at the board, we have no quotations.

Our Eastern quotations continue to report things as in about the same position as at the dates of our previous quotations. Money is difficult to be had, and most parties who wish to borrow, are compelled to be content without. Strictly first class is in demand, and not too much is offered; Rates are quoted at 10 to 12 per cent. Second class paper is in abundant supply, at high rates, varying from 1½ to 2 per cent.

The bank returns for the 18th are—

Loans	$82,191,994
Specie	10,801,532
Circulation	7,877,604
Deposits	61,181,007
Average clearings	18,080,186
Actual deposits	44,100,821

With regard to this, the New York Economist says—

The "clearings" continue to be less than for the corresponding weeks last year, when the payments did not diminish much until January. The "deposits" fell to their lowest point in the last week in October, and then increased $6.500,000 to the close of November. This year the figure embraces the bank deposits, and the decline has been uninterrupted until the last week, when it shows an increase. The loans are reduced now to a point, $1,000,000 lower than the extremest depression of last year. It would seem to be the case, that with so low a point for obligatioos to the banks, and an increase in applicable deposits that the point of pressure was passed. Indeed there are many indications to that effect. Produce comes forward more freely, and Cotton bills are more available. The western bank revulsion is, perhaps, the most serious pressure at this moment upon the market. The demand for specie, which necessarily takes place to supply the paper money forced out of circulation just at this moment, when money is wanted for the crops, produces a stringency, felt by all, and unseen in its immediate application.

The desire, or, perhaps, the necessity of realising upon stocks, causes a continual downward tendency in prices. Virginia 6's, which western bankers bought at 10 premium, are sold at 89; Missouri at 77. The low prices of the best stocks indicate that there is a supply of the effective demand of capital for investment. The wants of commerce are at present equal to the disposable capital.

Witb regard to stocks, the Railroad Advocate says—

The present has been a hard week upon every kind of railroad property. A regular and unchecked decline, witb scarcely an exception, bas attended the daily sales of the securities and stocks shown in our list. Michigan Central stock is about the only item that has improved. From November 10th to November 16th it ranged from 80½ to 79 3 4; but from November 17th to 23d, it has gone up from 80 to 82, possibly the result of some plausible *attacks* which have been lately made upon it by certain parties in this city. A very encouraging result, though, to the parties whose property was thus assailed.

Sales by A. H. NICOLAY, Nov. 23—

$8000 Great Western R. R., Ill., 1st mort., 10 per cent	75 00
10000 City of Racine, (Racine, Janesville, and Miss. R. R.,) 7 per cent	82 75
8000 Chicago & Miss., 2d mort., 7 per cent.	
30 Shares 3rd Av. R. R	25 00

RAILROAD EARNINGS.

WILMINGTON AND RALEIGH RAILROAD.—The earnings of this road for the past year, according to the report of the President and Directors, are as follows:

Gross receipts	$482,880 62
Expenditures	291,520 73
Nett profits	$191,359 89
Interest and exchange deducted	63,697 12
Profits to stockholders	$127,962 77

The liabilities of the Company on the 1st of October were $1,052,070.47.

CHARLOTTE RAILROAD.—The Winnsboro Register has been furnished with the following comparative statement of the business of the road:

1853.	Receipts from Passengers.	1853. Receipts from Freight.
Sept.	$4,617 83	10,376 03
Oct.	5,073 42	11,607 88
1854.		1854.
Sept.	5,053 35	12,487 63
Oct.	5,133 79	20,957 12

The receipts for the latter month exceeding those of any previous month since the road has been in operation by $2,000.

GREAT WESTERN RAILWAY.

AUDIT OFFICE,
Hamilton, Nov. 11, 1854.

Amount of traffic on the Great Western Railway, for the week ending November 10, 1854:—

Passengers	£6,806 17 9¾
Freight	2,421 3 0
Sundries	259 7 11
Total for the week	£ 9,587 8 8¾
Amount of previous receipts	99,292 1 10
Total receipts since 1st August	£108,879 10 6¾
No. of passengers for week	11,862
No. of passengers previously	156,642¼
Total No. of passengers since 1st August	168,504¼
No. of miles open	241

GEORGE DARTNELL.

GRAND TRUNK RAILWAY OF CANADA.

AUDIT OFFICE,
MONTREAL, Nov. 9, 1854.

Return of traffic for the week ending Saturday, the 28th of Oct., 1851:—

5343	Passengers, first class	$3,976 83½
876	" second "	747 59½
3834	Tons merchandise	10,082 90½
316,414	Feet of lumber	947 65
1075¼	Cords of firewood	1,472 41
	Mails, &c.	813 88
		$20,041 27½

Total currency.....£5,010 6s. 4½d.

COMPARATIVE STATEMENT.

1854, week ending Oct. 28	£5,010	6s. 4½d.
1853, week ending Oct. 29	2,121	6s. 5d.
Increase	£2,888	19s. 11½d.
Miles open	292	
Total receipts for current half year, commencing July 1st, up to week ending Oct 28th, 1854	£83,592	18s. 7½d

JAMES HARDMAN, *Auditor.*

LITTLE MIAMI RAILWAY.—The earnings of this road

For the year ending November 1, 1851, were	$676,138 78
For the year ending November 1, 1853	658,661 29
Gain in 1851	$17,477 49
The receipts of the same road for the week ending November 7	14,482 42
Same period last year	11,071 50
Increase	$3,410 92

DETROIT AND PONTIAC RAILWAY.—The earnings for October compared as follows:

Earnings, October, 1854	$11,261 58
Earnings, October, 1853	10,476 16
Gain in 1854	$785 42

PACIFIC RAILWAY.—The following is a comparative statement of the earnings of this road for October, 1854:

Freight	$4,166 08	
Passengers	5,287 20	
		$9,447 28
October, 1853:		
Freight	$1,319 53	
Passengers	4,004 85	
		$5,324 38
Increase		$4,122 90

The number of passengers carried during the month was 8,870.

CHICAGO AND GALENA RAILROAD.—The Secretary of the Chicago and Galena Railroad reports the earnings of this road, for the month of October, as follows:

Freight	$101,419 47
Passengers	80,453 00
Mails	1,171 14
Total	$183,043,61

ALBANY LUMBER MARKET, Nov. 22.

The amount of lumber leaving market for the last week has been large, the wharves having been lined with vessels receiving freight, and in many instances, loading across the decks of vessels which had dock berths. Sales have not been so active as the previous week, though considerable activity has been manifested. The sales made have been at our previous quotations.

The receipts by Canal from the 14th to the 21st of November, were as follows:

	Boards and Scantling, ft.	Shingles. M.	Timber. c. ft.	Staves. lbs.
1850	5,809,000	1,259	2,000	993,000
1851	5,429,000	980	....	1,776,000
1852	9,975,140	702	....	1,332,680
1853	6,619,567	100	....	3,558,700
1854	5,246,800	551	....	1,106,900

The receipts of Boards and Scantling for the six days compared with the corresponding days in last year, exhibit a falling off in the receipts of 1,702,767 feet, an increase in Shingles equal to 454 M., and a decrease in Staves of 2,891,800 lbs. The break near Rome has doubtless retarded many boats laden with all the articles enumerated in our tables, which will come into our next week's report.

The receipts from the opening of navigation up to the 21st of November, in the years named, were as follows:

	Boards and Scantling, ft.	Shingles. M.	Timber. c. ft.	Staves. lbs.
1850	209,070,690	32,982	27,832	149,534,480
1851	251,355,803	22,995	110,200	112,302,690
1852	302,648,025	31,189	286,340	103,392,089
1853	374,189,976	25,777	18,929	11,551,810
1854	291,765,751	29,615	28,909	127,198,008

The total decrease in the receipts of Boards and Scantling from the opening of Canal navigation to the 21st, compared with last season, is 32,384,225 feet; of Shingles, 5,183 M., while of Lumber there has been an increase equal to 10,680 cubic feet, and Staves, 15,584,593 lbs.

Communications.

TO THE PUBLIC INTERESTED IN THE FORT WAYNE AND SOUTHERN RAILROAD CO.

This Company have under contract the grading and masonry of 117 miles of line:—64 miles connecting the Wabash and Erie Canal at Fort Wayne with the Indianapolis and Bellefontaine road at Muncie, and 53 miles from the crossing of the Ohio and Mississippi, and Madison and Indianapolis roads, to the Ohio River at Jeffersonville.

A considerable portion of this work has already been done, and the balance is being vigorously prosecuted towards completion. $75,000 will cover the entire cost of what remains to be done to complete the 46 miles between Fort Wayne and Muncie, ready for the superstructure, and $250,000 will in like manner complete the 53 miles between the Ohio river and the Cincinnati and St. Louis Railroad.

The work has been prosecuted thus far without resort to a sale of mortgage bonds either upon the road or real estate, but the company have issued notes to the amount of $57,691 in denominations of $1, $3, and $5, payable on demand to bearer, which notes are pronounced a legal issue by counsel of unquestioned ability. Of this amount about $40,000 have been withdrawn from circulation, leaving only $17,691 outstanding, but which may be increased from time to time as the estimates may exceed the revenues of the company derived from subscriptions and sales. These notes are receivable as gold and silver in payment of lands, bonds, or subscriptions, and always redeemable from such means as the company may have.

With the view of the more speedy completion of the work, and absorption of these notes, the agents of the company have been authorized to sell real estate, until the 1st of February next, at 20 per cent. under its appraised value, and to receive the company notes therefor AT PAR, and have also been authorized to receive said notes, at par, for the subscription notes belonging to said company, allowing a liberal discount on such of them as may not be due. Said company notes will also be redeemed in 7 per cent. coupon bonds, principal maturing in 1859, and interest payable semi-annually, and secured by mortgage of unincumbered real estate, at four-fifths of its appraised value; said bonds to be given at 80 cents on the dollar in exchange for the notes at par.

The means of the company, as reported by the Secretary, on the 27th July last, were $1,892,500. Considerable additions have been made since that time, of which, for the present, we shall take no account. The work under contract, when completed, will of course be worth its cost; and hence to arrive at the means or resources of the company, the cost of the work should be added to the capital, less only the amount drawn from it to make past payments. This, when the work shall be completed, will make a grand capital of $2,292,500, with a debt of over $400,000. Here there is a CAPITAL of five and a half to ONE of debt, while the ordinary Banking system is a CAPITAL OF ONE to a DEBT OF THREE.

The belief is confidently entertained that the work now under contract can be completed within six months, and that within that time the company will have realized funds for the redemption of all the outstanding notes, and for the purshase of all the iron for the line under contract; and thus the road may be completed, and the cars running, in about the same time they might have been expected, had no derangement occurred in the Eastern money market.

W. J. HOLMAN,
Pres. F. W. and S. S. R. R. Co.

Nov. 26, 1854.

GAS.

AUBIN'S PATENT.—We are agents for this new and improved furnace, and having had one in operation at our office for several months past, can confidently recommend it as being simple in its operation, occupying little room and furnishing a pure and beautiful burning gas. From the peculiar arrangement of the retort it is not liable to *burn out*, thus saving a great part of the expensive repairs of other furnaces. We are prepared to erect these furnaces at our own risk and warrant them to produce good gas.

CHARLES FRODSHAM'S

IMPROVED WATCHES!

BEGGS & SMITH,

JEWELERS,

No. 6 West Fourth St.,

Adjoining the First Presbyterian Church,

CINCINNATI, O.,

HAVE received from Mr. Simon Willard, Boston, Agent for the United States, the sole and exclusive agency for the sale of **CHARLES FRODSHAM'S** NEW SERIES OF IMPROVED CHRONOMETER WATCHES, in the states of Obio, Indiana, Illinois, Michigan, Iowa, Wisconsin, Missouri, Kentucky and Tennessee.

In the Watches of the New Series, Mr. FRODSHAM has succeeded by a more perfect method of compensation, a more correct adjustment in isochronism, and an entirely new and peculiar construction of the train, by which more power is obtained without increase of size, in producing timekeepers of wonderful and unrivalled accuracy. The great importance of the improved watches is a perfect regularity of time under every variety of climate, motion and position. So perfect are the adjustments, that the most violent exercise, such as horseback riding, jumping, etc., produces on them no sensible effect They are therefore, particularly adapted to Railroad purposes.

Liberty is given to refer to the following gentlemen, who, among many others, have proved the excellence of Charles Frodsham's Watches as timekeepers:

Gen. John S. Tyler		Massachusetts.
John E. Thayer, Esq.		"
Enoch Train	"	"
E. C. Bates,	"	"
F. W. Thayer,	"	"
Wm. Whiting,	"	"
Geo. M. Thacher,	"	"
David Dyer,	"	"
Alvin Adams,	"	"
Billings Briggs,	"	"
David Weld,	"	"
Hon. Ebenezer Lane,		Sandusky.
E. F. Osborne, Esq.		Obio.

The Prices of the New Series Gold Cases, are According to Size, viz:

SIZE 12	
" 14	$230
" 16	
" 18	250
" 20	275
" 22	300

Recommendations:

Boston, Sept. 3, 1853.

The Compensated Lever Watch I purchased of you, made by Charles Frodsham, London, No. 7300, has varied but thirty seconds from mean time in six months, by actual daily comparison with your regulator.
Yours, &c., ALVIN ADAMS.
Mr. Simon Willard.

Boston, Feb. 4, 1854.

Mr. S. Willard Dear Sir—The Frodsham watch, No. 7557, I purchased of you last October, has performed wonderfully well. I have compared it almost daily by your Astronomical clock, and its variations for ninety days is but one second, or a loss of but one-hundredth of a second per day. I consider it better than any Marine Chronometer I ever used.
Yours truly,
FISHER A. NEWELL,
Late master of Sch., Honolulu.

Sandusky, Obio, Jan. 1, 1854.

Mr. S. Willard, Dear Sir—More than six months ago I purchased of you two of Frodsham's best watches—up to this time, one of them, No. 7571, has altered from mean time but twenty-seven secouds, and the other, No. 7517, but twenty-three seconds in the same period.
Yours, respectfully.
E. F. OSBORNE.
To Mr. Simon Willard.

Gentlemen—On the 1st of April last I procured from Mr Willard, of Boston, one of Frodsham's improved series of watches. It was regulated and set to Cincinnati time. It has not, in that period, been suffered to run down, nor have the hands been moved, and to day it is 20 seconds only slow. Respectfully yours,
HENRY O. AMES,
Sup,t Cin. Ham. & Dayton Railroad.
August 18, 1854.

To Messrs. Beggs & Smith.

The following is an extract from a letter of William Brown, Esq., Springfield, Ohio, engineer on the M. R. & L. E. R. R., who has personally kept the rate of several of Frodsham's watches.

"Finally from what I have known of Frodsham's watches, I am very strongly impressed with the idea, that they are a decided improvement on all other timekeepers, and were they set in gimballs and used with the same care, I think their performance would equal that of Mr. Frodsham's celebrated box chronometer, and would answer the same purpose for determining longitudes."

DENNEY'S DIVIDED CAR AXLE.

PATENTED JANUARY 31ST, 1854.

THE ATTENTION OF RAILROAD COMPANIES is respectfully invited to an examination of the merits of this valuable invention, which offers to add largely to the safety of life and property.

The valuable features of this arrangement of axle are, a saving of full fifty per cent. in motive power on crooked roads: the rails are protected from being destroyed by the flanges of the wheels coming in contact with them on the curves, as is the case with the stiff or rigid axle, which not only destroys the rail but puts a constant strain upon the wheel and axle, causing the wheel on the inner rail to trip or revolve upon the rail under the weight of the car and its load, while the opposite wheel is traversing its greater distance; the tendency of which, is to wear the wheel flat, and cause it, or the axle, to break sooner or later. There is less danger of the car leaving the track from its having become spread.

Axles fitted in this way do not require to be near so large, and yet contain more strength than the common axle, for the reason that the liberty given to the wheels, which allows them to accommodate themselves to the curvatures of the road, removes wholly the strain thrown upon the ordinary axle; and therefore, it requires no more strength of iron at any point between the wheels, than is contained in the bearings, which in the ordinary axle, is not more than one-third of the strength of the other portions of the axle.

The elongated bearing which forms the connection is so proportioned as not to wedge or become tight in the alloy, the wear being almost imperceptible, requiring to be set up not oftener than once in twelve months, by a slight tightning of the screw nuts. If, from long service, the alloy becomes worn out, it can be refilled, making it as perfect as when first filled up, and the gauge of the wheels will never become changed so as to injure the running of the car.

It is after a series of the most careful experiments, conducted through a period of time sufficient to test in the most satisfactory manner, the real merits of divided car axles, and a thorough and practical test in real service of over two years, that we now offer to Railroad Companies one that we are assured will give universal satisfaction in its operations, and both simple and cheap in its construction.

We are now ready to dispose of rights to use the above axle on the following terms: We guarantee full and perfect satisfaction by giving ample time to thoroughly test its merits, and will require no payment to be made until such satisfaction has been given. All applications to be made to

RAILROAD HOTEL.

CINCINNATI, O.

THE GIBSON HOUSE, Cincinnati, is situated on Walnut-street, between Fourth and Fifth, in the immediate neighborhood of all the Railroad Offices. For comfort and convenience it is believed that this hotel is unsurpassed. It is heated with steam from the first floor to the fifth, thus making it the most desirable winter house in the West. The proprietor hopes to enjoy a share of the patronage of Railroad men.
A. WETHERBEE, Proprietor.

COLUMBUS PIQUA, AND INDIANA RAILROAD.

New route from Columbus, West and from Urbana, East.

On and after Monday September 19, 1853, two trains per day, (Sunday excepted) each way, will run on this Road, between COLUMBUS and URBANA. Will leave Columbus at 4.50 a.m., and 3.30 p.m.—arriving at Urbana at 8.12 a.m., and 6.14 p.m. Returning—will leave Urbana, for Columbus, at 9.15 a.m., and 3.00 p.m.—arriving at 12.05 and 6.55 p.m.

The 4.50 a.m. train, from Columbus, will connect with the night Express train from Cleveland and arrive at Urbana in time for the morning train north for Sandusky and intermediate points. Persons arriving by the morning Cleveland and Zanesville trains can have a few hours at Columbus and leave by the 3.30 p.m. train—arriving at Urbana in time to get supper and take the 5.35 p.m. train for Dayton and Cincinnati.

The 9.15 a.m. train from Urbana connects with the morning train from Cincinnati and Dayton that arrives at Urbana 8.40 a.m.—arriving at Columbus at 12.05 p.m in time for the 1 p.m. train for Cleveland, connecting with the Buffalo and Dunkirk boats. The 3.00 p.m. train will leave Urbana on the arrival of the Sandusky train—reaching Urbana at 2.45 p.m.—and arrive in Columbus in time for the various night trains.

A line of Omnibuses will connect with the trains at Urbana for the conveyence of passengers to and from Piqua and Greenville over a good Macadamized road.

Baltimore & Ohio Railroad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was opened to the Ohio River in the spring of 1853, and has already established a high character with the business community of the West. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of the country through which it runs, and its many admirable provisions for the expedition, comfort and safety of travelers, it has received such favor as a passenger road, (with its present connections,) as to show that it will become the preferred route for all portions of the West and South-West as soon as its further connections are formed by the completion of the Central Ohio, North-Western Virginia and other Railroads now rapidly finishing.

FOR PASSENGERS BY THIS ROUTE,
Through Tickets from all Parts of the West,
ARE NOW SOLD IN
Cincinnati, Louisville, Madison, Indianapolis, St. Louis, Chicago, Toledo, Detroit, Cleveland, Columbus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED

For Sending Travelers Direct to
WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION
The fullest accommodations are provided. In motive power and Cars, the company has abundant resources, which are being further extended to meet the demands of Western Trade. In the dispatch and regularity of transpart, and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road connects directly in the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,
The numerous Steamers of the Parker Vein Line to New York and Boston, the Ericsson Steamers by Canal to Philadelphia and New York,
And various other Lines of Steamers and Sailing Vessels to the Eastern Ports, and to Richmond, Norfolk, Charleston, Savannah, etc.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in

AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Reservoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.

The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.
WILLIAM SHERBURNE,
PRINCIPAL AGENT,
May 18.6* Office, No. 167 Broadway, New York.

GUNPOWDER,
MANUFACTURED BY
The Hazard Powder Company.
HAZARDVILLE, CONN.

DESCRIPTION OF PLAN.

Fig. 1, of the above cut, represents the foundations, consisting of *Bank* and *Track Walls*, the latter made of cut, the former of hammer-dressed stone, with cut stone coping. The Track is bent of the ordinary T rail, spiked and leaded to the stone track walls. The Center Pier is made of cut stone, with a step for screw and pivot bolted to the same.

Fig. 2, shows the framing.

Fig. 3, is a side view of Main Truss, with the mode of gearing, including the mitre-wheels, iron crank frame, rack and pinion, foundations, pivot wheels and pedestals.

Fig. 4, gives a perspective view of rim, segments, decking, etc.

Fig. 5, is an end view of the main trucks, with pedestals and wheels.

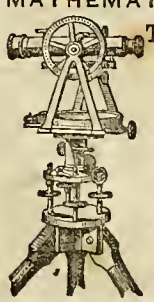

Fig. 6, is a screw for pivot, 6 inches in diameter, working in a steel step through a nut for adjustment.

Fig. 7, shows a cross section of track wall, well, and pedestal.

CINCINNATI:

THURSDAY MORNING,.....DEC. 7, 1854.

E. D. MANSFIELD,

May be found at the office of the *Railroad Record*, 167 Walnut st., between the hours of 11 A. M. and 1 P. M.

OHIO RAILROADS—COMPLETE AND IN PROGRESS.

It is our intention to make a complete REVIEW of all the railways in the United States; their extent, condition, debts and income. This will be a work of some labor and magnitude; but, we trust, one which will be of no small value to our readers. Continual inquiries are made of us, in relation to the condition and progress of railways, in various directions. These inquiries cannot be answered usefully, without entering into many details, and going over much ground, which requires time and labor. To do this, we have determined to perform the office of a reviewer, and collect and systematise all the useful information extant on the subject. It is our purpose to begin now, and finish in the early part of January; so that in the beginning of 1855, our readers shall be presented with a faithful account of the great railway interest in the United States. We begin with our own state, and shall proceed with the central-west first; for here now centers the most important railway interests, and the greater number of unfinished and undertaken lines.

In Ohio, all its railway interests have steadily progressed, in the year 1854; but many of the new and unfinished works have (as is the case in the whole country), had great dificulty in raising money enough to meet their immediate demands. Those, however, which had considerably advanced, have been able to go on. Some are entirely completed, and others are partly in operation. We stated in the spring, that about 500 miles would be completed in this year, and such is in fact the case. Much of the money required in the last six months has been raised at home. This has embarrassed some of our banks, and quite as much, if not more, the banks and financiers of New York, from whom the western balances were withdrawn. The year is likely to close, however, with more success to the railways, and less general disaster to the community than might, at one time, have been expected. We may safely repeat what we have often said before, that all the railways undertaken in Ohio, which ever had a fair prospect of utility and profit, *will go on to completion*. Even some of those which many think unreasonable, will be completed. In a rich agricultural state, railways will pay—quite certainly—till there is one mile of railway to ten square miles. In some parts of the United States, such as Massachussetts, the amount is even greater than this.

At present, the extent of railways in Ohio completed, and in progress, is as follows:

ROADS.	COMPLETED.	IN PROGRESS.
Little Miami,.....	84 miles,	
Xenia and Columbus,....	54 "	
Cin., Cleveland & Col.,.	135 "	
Cin. Ham'l'n & Dayton,.	60 "	
Mad River & Lake Erie,.	153 "	
Greenville & Miami,.....	46 "	
Dayton & Western,.....	34 "	
Eaton and Hamilton,....	37 "	
Dayton & Michigan,.....	20 "	.....180 miles.
Dayton and Belpre,.....	15 "	..... 45 "
Fin'l'y br'h of Mad river	15 "	.....
Cin. & Hillborough,.....	37 "	..... 60 "
Cin., Wil., & Zanesville.	90 "	..... 46 "
Cin. and Marietta,.....	63 "	.....197 "
Springfield & Columbus,	19 "	.....
Springf'ld & Mt. Vernon,	50 "	..... 70 "
Bellefontaine & Indiana,	118 "	.....
Col., Piqua & Indiana,...	102 "	.....
Ohio Central,.....	140 "	.....
Sandusky & Newark,...	117 "	.....
Ohio & Indiana,.....	131 "	.....
Ohio & Penn.,.....	147 "	(in O.),
Cleve., Zanesville & Cin.	50 "	..... 54 "
Cleve. & Pittsburgh,....	99 "	.....
Cleve. & Toledo,.....		
Northern division,...	87 "	.....
Southern division,...	60 "	.....
Cleveland & Erie,.....	70 "	(in O.),
Scioto & Hocking Val...	45 "	..... 50 "
Iron Road,.....	20 "	..... 20 "
Ohio & Miss.....	20 "	(in O.),
Pitts. & Steubenville,..	20 "	.....100 "
Cin. & Dayton (S. L.)..		..... 52 "
Cin. & Cleve., (S. L.)..		.....220 "
Pittsburgh & Cin,.....		..... 90 "
Franklin & Warren,....		.....150 "
Clinton Line.....		.....140 "
Tiffin & Fort Wayne,...		.....102 "
Aggregate,	2,131 miles,	1,576 miles.

Of the unfinished lines, the condition is as follows:

The *Dayton and Michigan* is said to be finished between Piqua and Sydney, about 30 miles; but is not yet in operation.

The *Cincinnati and Marietta* is graded, except perhaps a very little from Chillicothe to Athens, about 54 miles; and the iron is bought, so that part may be expected to be in operation soon.

The *Cincinnati, Wilmington and Zanesville* is going on, with a great deal of the work done, between Lancaster and Zanesville.

The *Pittsburgh and Cincinnati* has about 20 miles nearly finished, north of McConnelsville, and expect to go on shortly.

The *Cleveland and Zanesville* line is open from Cleveland to Millersburgh, and it is thought will be able to go on to completion.

The *Cincinnati and Dayton Short Line* has some 4000 feet of the Great Tunnel penetrated, and some grading done on the line.

The three last roads in the above list, are said to be all under contract, and claim to have large subscriptions, sufficient to insure their completion. It is evident, however, that they must go on, if at all, very slowly. On the whole, we think it quite certain, that at least 300 miles of additional road will be finished in 1855, in spite of all the difficulties, and depression of the times; and whenever there is a revival of credit and confidence, 1000 miles will be completed. In a short time, Ohio will have 4000 miles of completed railway, and that will give her about one mile of railway to ten square miles; which, with the present population and industry will be sufficient.

The lines of railway which are now completed, or soon will be, make the following great trnnks across the state:

NORTH AND SOUTH.

1	Cin., Col. and Cleveland Line,.....	253 miles.
2	Cin., Dayton & Sandusky Line,.....	213 "
3	Sandusky, Newark, Jackson and Portsmouth Line (unfinished.).....	235 "
4	Cleveland & Wellsville Line,.....	99 "

EAST AND WEST.

1	Lake Shore Line—Toledo to Ashtabula,...	157 "
2	Pennsylvania, Ohio, and Indiana, *via* Pittsburgh, Crestline, and Fort Wayne (in O.)	278 "
3	Ohio Central, *via* Columbus, Zanesville & Piqua,.....	242 "
4	Cin. & Marietta, *via* Chillicothe & Athens, (unfinished),.....	260 "
5	Two lateral lines, connecting with the Ohio Central, are the Bellefontaine and the Wilmington roads,.....	254 "
	Trunk Lines.	1,991.

Thus it appears that the largest part of Ohio railways, is comprised in *eight great trunk lines*, which intersect each other at right angles; and divide the state into sixteen or seventeen comparts. These great lines pass *through forty county seats*; and of the eighty-six counties in the state, *sixty-nine* will be penetrated by railways. If we fix the year 1856 for the completion of the present system of railways—as now undertaken—leaving out of view, those not partly finished, we may anticipate the following aggregate results:

Miles of railway,.....	3,000
Cost,.....	$90,000,000
Gross Revenue,.....	15,000,000
Nett Income,.....	8,000,000
Deduct. for shipping fund,.....	800,000
Dividends, 8 per cent.,.....	200,000

This, we say, may be safely anticipated, as the result of railway enterprise in Ohio, at the end of 1856, after allowing for all the effects to be produced by the present financial crisis. At present, we have *two thousand one hundred and thirty one miles of completed railway*; which, with the exception of two or three pieces of local road, are all receiving an income greater than what the most sanguine have anticipated.

The cost income and debts of the Ohio railways we shall consider, when we have completed a list and description of those, in the other North Western States.

PRESIDENT'S MESSAGE—REVENUE AND FINANCES.

The President's Message has been received, but excites little attention, as it contains no startling announcements either of fact or opinion. By far the most agreeable part of the document, is the very favorable view given of the National Finances. The President states the Balance Sheet of the Nation thus:

Revenue for the year ending 30th June, 1854,	$73,549,005
Ordinary Expenditures,.....	41,018,249
Excess of Receipts,.....	$32,530,756
Balance on hand 30th June, 1853,.....	$21,942,892
Money in Treasury in 1854, not applied to ordinary purposes,.....	$54,673 648

The Extraordinary Expenditures were as follows:

Mexican Indemnity,.....	$10,000,000
Public Debt Redeemed,.....	24,336,380
Extraordinary Payments,.....	$34,336,380
Deducting this from the Surplus Money in in the Treasury leaves a balance of.....	$20,337,268

It appears, then, that the ordinary receipts of the Government have exceeded the ordinary expenses of Government *thirty-two millions of dollars.*

The receipts from Customs will undoubtedly be less, during the current year; but, on the other hand there will be no payment, on account of the Mexican Indemnity. Including the balance remaining, there must be in 1854–5 full thirty millions of surplus cash at the end of the present financial year. What shall be done with it? The President says buy the public debt, and reduce the Tariff. The latter is a sort of madness, to which Congress is likely to give little heed. We shall be saved from at least—that folly.

The only part of the Message in which the President is eloquent is, *in opposition to railways!* For such is the substance of his remarks. This seems a very unnecessary warfare,—when the depression of the money market has already so effectually checked them. It is happily, however, impossible for the President to engraft his narrow notions on the American people. They will proceed in the construction of Railways, as seems best to them; and heed little the opinions of a man, who has but temporary power,—and that power of small extent.

VALLEY OF THE AMAZON—2d PART—BY L.T. GIBBON.

We are indebted for this work to the Hon. Mr. English, of Indiana. The book does great credit both to the government and the author. The publication of such works is one of the ways in which the government contributes to the stock of useful knowledge and the progress of science.

ARKANSAS PUBLIC DOCUMENTS.

A friend in Arkansas has sent us the annual reports of the Auditor, Treasurer, Superintendent of penitentiary, Engineer of the Fulton and Cairo railroad, and message of the Governor. We thank him for his attention, and shall endeavor to make good use of them.

Railroads.

ARKANSAS PACIFIC R. R.

The Pacific Railroad is a subject of intense and absorbing interest to every State west of the Mississippi, and of no less importance to those bordering on the east. That a Pacific railroad will be built within a few years is a matter palpably manifest. Missouri has already located and put in actual and successful operation a portion of this mighty enterprise, and proved by its success how far enterprise and undaunted effort is sure to meet its reward. Her Pacific railroad, stretching its iron bands into the wilderness, has proved that the scheme is no Utopian dream, no idle speculation of the enthusiast, no paper project, destined to oblivion. Texas has already said, in terms not to be misunderstood, that she *wants* and *will have* a Pacific Railroad, that her magnificent public domain, a gift more useful and desirable than the fields of California, are not worth to her what the highway of nations would be. She has laid down a route which will be built; we say *will* because, even if it were possible to defeat the present enterprise, we do not believe that the inducements which she offers can be long neglected by capital which is lurking somewhere out of sight till the present crisis is past. Iowa, with her air line project, is also awake to the important results expected from the road. And Arkansas has already surveyed a route which she bids fair to open. But amid these four gigantic enterprises it may well be asked, can all be built and all succeed. If it were a matter of necessity that all should be driven through with the utmost speed, we would answer *no;* we do not believe that capital could be furnished in sufficient quantity to meet the necessities of all these roads, if pushed with the rapidity that some of the friends of the various projects desire. But in view of the progressive course *already* adopted by Missouri, and absolutely *necessary to be adopted* by the other States, we believe that all these roads will eventually be built, with as much or greater ease than the great projects of other States.

The principal dependence of the Texas and Arkansas enterprises, are the public lands donated by the States and the general government. The Missouri road has thus far been carried forward by the enthusiasm of the people. As to Iowa we are not sufficiently informed. How far public lands may form a sufficient basis for railroad purposes is shown in the success of the Illinois Central line. It is estimated that in the year 1853 there were sold of public lands, including purchases on land warrants, 12,000,000 acres. Now, emigration and settlement must seek the great channels of commerce, and fill up, first the most accessible parts of the country, and it is not unreasonable to suppose that these two States, and in consequence, these two railroads may expect to dispose of at least one-fifth the amount of public lands that will be sold. Now let us see the value at which these lands may be sold, and we shall then have before us the available means of the Companies. The Bloomington Pantagraph of the 14th contains a report from Gen. Gridley, of the sale of Railroad lands in the McLean District. The office was opened on the 27th of September, and the sales to October 1st amounted to fifteen thousand two hundred and forty-two acres. Amount received for same, $151,976. The applications for October were for lands worth more than $260,000. None of the lands have been sold for less than five dollars per acre, and forty dollars per acre is the highest price received.

Here, then, we have the experience of Illinois; her railroad lands have sold at an average of nearly $10 per acre; and while we may hardly expect Texas and Arkansas to do as well as this, it proves at least that we do not greatly overrate these lands at $3 per acre.

Total sales for 1853,.....	12,000,000 acres.
Estimated one-fifth as prospective sales for Texas and Arkansas, for Railroad purposes,.....	2,400,000 "
Value, at $3 per acre.....	$7,200,000
Proceeds for each R. R. per annum,.....	3,600,000

Now, these Railroads after the first year are each required to build 100 miles of road per annum. The estimated cost of the road in Texas, judging from general experience, is $30,000 per mile, or for 100 miles, $3,000,000
Annual recp. for lands estimated 3,600,000

Surplus of income, $600,000

Or enough to build 20 miles of railroad. The estimated cost of the Arkansas Railroad from the report of the Engineer, is $16,473 79 per mile, or for 147 miles, $2,422,965.

The Public Lands Donated by the General Government, 564,480 acres,.....	$1,693,440
Leaving to be provided by the Company,.....	729,525

With a prospect of grants from the State, should it be found necessary.

These conclusions, then, render it evident that the roads *can* be built, and we may add we believe they *will* be built, it is for this purpose that the Legislatures of the States have appropriated their public domain, and that the people of these States have unanimously sanctioned the action of their representatives. They want these roads, the present necessities of their country require them, and they have here the means of accomplishing the desired object.

BALTIMORE & OHIO INJUNCTION.

The city of Wheeling has obtained an injunction against the Baltimore and Ohio railroad, forbidding it to unite with the Ohio Central road, four miles *below Wheeling.* As the object was to save about eight miles of distance, the proceeding looks like an imitation of Erie conduct.

OPENING OF THE NEW ORLEANS NORTHERN R. R. TO OSYKA.

We learn from the New Orleans Daily Delta, that on Nov. 10th a party of invited guests went over this road to Osyka, in honor of its completiou thus far, and that the affair and the road were alike pleasing to the company. The Delta gives a glowing description of the company and the ride, and humorously says of the cars, which are of Cincinnati manufacture, that they are so comfortable that there is no temptation to commit any of our numerous American freedoms, in respect to the disposition of the legs and feet.

Osyka is a new town, springing up in the wilderness. "Six weeks before," the Delta says, "we made this same trip, and at the terminus of the road, just over the line in the State of Mississippi, found an undisturbed forest of pine and other trees." At the time of the excursion there, the same paper proceeds to say, "there are fifteen or twenty neat houses, among them a fine, commodious hotel, some half a dozen stores, a handsome Tuscan depot, and several other establishments, not including a single grogery. Then, too, to show that these houses have not been erected too soon, we counted twenty-two wagons in and about the village, all either unloading or having unloaded."

Osyka is the Indian name for beauty. It is situated in Pike county, Mississippi, about half a mile from the Tangepahoe. The location is beautiful, on a gentle rise, with an easy descent around. It is eighty-seven miles from New Orleans, and forms the present terminus of the road, though it is hoped this will not be the case long, as our Southern friends manifest much interest to have the work pushed on.

The dinner at Osyka was a pleasant affair, a number of toasts were drunk, and speeches made, among which were the following from Major Beard:

James Robb, whose energy of character developed an unknown region of the sunny South, and to whom New Orleans is indebted for a railroad to the line of Mississippi,—may he always have a "Garland" on his brow, and never be "backed out."

This is a deserved tribute to Mr. Robb, and was followed by some well-timed remarks from Mr. Peters, illustrating the importance of the road. Col. Garland, in a happy speech, illustrated the extraordinary development produced by the road in the country which it traverses. He asserted that the increase in the value of property along the line would more than pay all the costs of the road.

The party returned to New Orleans well pleased with their excursion.

☞We are rejoiced to learn that the masonry of the Loudon bridge is completed, and that Messrs. Maxwell, Briggs & Co., are vigorously pushing the superstructure to completion. This is the last bridge of any importance on the E. Tenn. and Ga. railroad, remaining to be finished.

Communications.

ST. LOUIS AND IRON MOUNTAIN R. R., Mo.

[We have received the following interesting communication from a friend in Missouri, who is well posted up in regard to the roads in this enterprising and growing state. The triumphant success of the Missouri Pacific railroad so far as completed, will be remembered by our readers; demonstrating, as it does, that Missouri can support her roads, and that her roads will be the great means of developing her natural riches. The Iron Mountain railroad, destined chiefly for freight between St. Louis and the largest mass of iron ore in the United States, cannot fail to exert its influence on the region through which it passes, increasing the value of the lands, and attracting settlers on the line of its route:]

This road extends from St. Louis to the Pilot Nob Mountain, a distance of 82 miles. The entire line has been let to Watts & Co., eastern contractors of ability and experience. They are working a portion, and the residue they have re-let to different individuals, who are now pushing it forward with rapidity.

To complete this line, the company have available funds, including state credit to the amount of $3,500,000, and this is deemed sufficient to cover the entire cost, including superstructure, &c.

The first twenty miles south of St. Louis, is located immediately on the banks of the Mississippi, whose gradual slope and alignment affords an excellent opportunity of locating to advantage. The other 60 miles traverses the rich table lands of Jefferson and other southern counties of the state.

The gradients are very light, and the curves unexceptionable—the former not exceeding 30 feet per mile, and the latter 1900 feet radii.

The graduation favorable; the bridging with one exception, (that of the Nereuce,) a mere item, and the tunneling only 1000 feet upon the whole. The cost of this road will compare advantageously with any other road in the state.

When completed, the entire road bed, 15 feet in width, will be covered with a coating of ballast, 1 foot deep, which it is presumed will effectually exclude that disagreeable travelling companion "Poussiere," from which we are too often called upon to suffer.

Of the future prospects of this road it is impossible to speak, at least with certainty. At present, it is intended and will be used chiefly as a freight road, transporting iron ore and other metals from the mountain to St. Louis and *vice versa*.

From the thinly settled country through which it passes, the passenger travel will necessarily for the present be small; though I doubt not, as in the case of the Pacific road, will far exceed the amount calculated upon by the engineer. There is a very great certainty however, that at a future day, it will form one of the links in the continuous road from New Orleans to St. Louis. Its passenger travel may then be approximately obtained, from the great amount of travelling done on the Mississippi river, and which, it is anticipated, will resort to the road, in preference to following the sinuous, turn-coursing and dangerous course of this famous "father of waters."

The contractors presume upon the completion of the first twenty miles by January '56 and the residue in eight months thereafter.

Respectfully,

J. L. S.

Selected Railroad News.

REPORT OF THE CHIEF ENGINEER OF THE ARKANSAS PACIFIC RAILROAD CO.

GENTLEMEN—Having been employed by you to survey the route of the A. P. R. R., a branch of the Cairo and Fulton railroad, from Fort Smith to Little Rock, by way of Dardanelle, I have the honor to inform you that I have completed the work confided to me, and herein communicate the results which have been arrived at.

A party having been organized, and a suitable camp equipage provided, the survey was commenced on the 10th of March, and the field work completed in the latter part of May. A brief description of the route fixed upon, will be of service to those who read this report having the map before them.

Beginning in the eastern part of the town of Fort Smith, the line runs in a south-easterly direction through the lower part of Mazzard prairie, touches the edge of the Arkansas river bottom, in the bend below Knox's farm, crosses Vache Grasse creek near the old military road, and continuing near the same, passes through Grand Prairie, leaving Judge Aldridge's about half a mile to the south. In continuation, after leaving both of the Short Mountains to the north, it crosses Shoal creek just below Sadler's mills, and is carried down Delaware creek, and across Dardanelle mountain, in the gap through which the military road passes, and thence to the town of Dardanelle. Crossing the Arkansas river at that place, the line is carried a little north of Wilson Barnett's, and crossing Point Remove creek a mile above Emsy Wilson's, it passes a mile or more north of Lewisburg. Thence it is continued, near the military road, to within two or three miles of the Cadron. Here, the most direct course towards Little Rock would still take us along the military road and across the Cadron near its mouth; but the Cadron mountain presents so formidable an obstacle in that direction, that I was obliged, very reluctantly, after a thorough examination of the country, to adopt a more circuitous route. The line was therefore carried across the Cadron, about two miles above the military road, and, after continuing for four miles along the northern base of the Cadron mountain, it passes through a gap in the latter, and turns southwardly towards Little Rock.

From Fort Smith to the Cadron gap, a distance of one hundred and fifteen miles, the

route is at no place more than three miles from an air line, between the two points. But from the Cadron gap to Little Rock, independently of the great bend the line makes at the former point, it is rendered much more tortuous in consequence of mountains interposing on the direct route.

But to resume the description of the route: From the Cadron gap, avoiding a hilly country, on the right, and the overflowed land of the Palarme bayou on the left, the line is continued nearly south to within 1½ miles of the mouth of the Palarme, when it crosses that stream, and passes the Palarme mountain in a gap, three miles from where that mountain abuts upon the Arkansas river. Here the line strikes the military road again, and continues along and near it to the north bank of the Arkansas river, opposite Little Rock, where it is proposed to connect with the Cairo and Fulton railroad.

The accompanying profile of the line will show the depth of cutting and filling required to grade the road; from which it will be seen, that in crossing the Palarme mountain, the work will be very heavy. It was with much solicitude that I made a thorough exploration of that mountain, to see if it could not be crossed on more favorable terms. A line which was run, crossing the mountain at Jones's gap, four miles east of the adopted route, proved to be no less expensive and much more circuitous; while to pass around the end of the mountain, where it abuts upon the river, would increase the distance some two miles and a half, which, estimating the value of a mile of distance saved at $30,000 (and that is less than many engineers put it at), would at once determine the location of the line in its present position.

It may be a startling proposition to some persons, that the saving of a mile in the length of a railroad, is worth $25,000, although the longer might cost just the same amount of money as the shorter. To illustrate the subject, I will quote from a report made by Col. C. F. M. Garnett, the experienced chief engineer, formerly of the Nashville and Chattanooga railroad, and at present, of the Lynchburg and East Tennessee railroad. He says: "The value of the distance saved varies with the amount of business on a road. Under the supposition that a road will open with a trade requiring one mail and passenger train and two freight trains, in each direction, daily, it has been estimated that, on each mile of road, the interest on capital, the cost of repairs, and the whole cost of transportation, will be $1,200 per annum, which is the interest on $20,000. This is, therefore, taken as the value of one mile of distance saved." That is Col. Garnett's estimate, on a road doing a comparatively small business; but when the road, by the stimulus to enterprise and industry which it affords, shall have increased its business three or four fold, the value of the mile saved becomes greatly enhanced. Hence the great importance of locating railroads as nearly as possible on air lines, between their termini.

It has been said before, that the route is very direct to the Cadron gap. From that point to Little Rock, it is not more circuitous than might have been expected in a broken country, so far in the interior. In this connection, I will here remark that Captain Barney, who made the survey on the north side of the river, kindly furnished me with a trace of his line, from near Norristown, to its termination on the Cairo and Fulton railroad. I have placed on my map that portion of it between the Cadron and the C. & F. R. R. It will be seen that at the Cadron gap the two lines are within a mile and a half of each other. I am assured by Captain Barney, that from that point to the end of his route, the country is most favorable to the construction of a railroad, and a glance at the accompanying map will show that that portion of his line, taken in connection with mine, from Fort Smith to the Cadron gap, would form a railroad route which, for its near approach to an air line, has probably no parallel in the country. The propriety of giving that direction to your road, instead of carrying it to Little Rock, is a point which does not require discussion in this report, as the grant of land which will go so far towards building it, is bestowed by the munificence of congress upon a "Branch of the Cairo and Fulton R. R., from *Little Rock to Fort Smith.*"

But the above will show the advantages of your route, as compared with any other, in the event that it should be deemed advisable, at some future day, to connect your road with some other one in that direction.

I have estimated the cost of grading for a road-way, eighteen feet wide in excavations and twelve feet on embankments. These are the dimensions used on the Memphis and Charleston road—one of the best in the country—besides many other railroads in the south; where the mild winters cause less damage to the embankments and cuts, by alternate freezing and thawing, than the northern roads suffer in their rigorous climate.

In order to secure the cheap working of a railroad in operation, much will depend upon its gradients; that is to say, the inclination of ascent and descent of its graded surface. The more gentle the gradients, the less power will it require to draw the trains of cars over the road, and consequently the lighter will be the locomotive engines necessary to do the work. The light engine not only causes less wear and tear, and displacement of the track, than the heavy one (and consequently lessens the expense of keeping it in repair), but consumes less fuel, and makes it possible to use a lighter and less expensive rail and superstructure. In view of these facts, I am happy to say that your road stands on a much more favorable footing than many of the important roads of the country.

The maximum grade which has been found to be necesary, is fifty feet to the mile: and I will take occasion to say, that it is only for a short distance that such a grade is found neeessary.

It was necessary, for a distance of 1890 feet, to use a five degree curve—the radius being 1146 feet; and for a distance of 1600 feet, to use a curve of four degrees, radius 1432½ feet. With these exceptions, the whole line is reduced to the gentle eurvature of three degrees, or less. More than 81 per cent. of the route is straight line; a fact which exhibits the alignment of the road in a most flattering aspect.

The following shows my estimate of the cost of your road:

From Fort Smith to Dardanelle—74.7 miles.

129,467 cubic yards excavatfon of rock and slate at 75 cts.,	$95,100
413,666 cubic yds. excav'n of earth, at 18 cts.,	74,459
1,461,100 " " emb'k't, at 14 cts.,	204,554
Bridging and Masonry,	60,607
Total—graduation, bridging and masonry,..	$426,720

From Dardanelle to Little Rock—72.38 miles.

113,362 cubic yards excavation of rock and slate, at 75cts.,	$85,026
362,227 cubic yds. excav,n of earth, at 18 cts.,	65,200
1,465,000 " " emb'k't., at 14 cts.,	205,100
Bridge across the Arkansas at Dardanelle,	140,000
All other bridging and masonry,	45,795
Total—gradnation, bridging and masonry,..	$541,095

Graduation, bridging and masonry, from Fort Smith to Dardanelle,	$436,720
Graduation, bridging and masonry, from Dardanelle to Little Rock,	401,095
Bridge across Arkansas river at Dardanelle,	140,000
147.08 miles superstructure, at $7,500 per mile,	1,103,100
3½ miles side-track, at $7,500 per mile	26,250
Right of way	5,000
Engines, cars, watch-houses, shops, water-stations, &c.,	210,800
Engineering and contingencies,	100,000
Total cost of road and equipment,	$2,422,965
Total cost per mile,	$16,473,79

The estimate of $7,500 per mile for the superstructure, is based upon the use of a rail weighing 50 lbs. to the yard (about 78½ tons to the mile), at a cost of $80 per ton, delivered at some point on the road. With the comparatively easy grades on your road, and in view of the fact that it cannot, for years to come, have so heavy a business to do as the great throughfares of the older states—it is believed that a rail of that weight will be heavy enough; until the increased business of the road shall make a heavier one necessary, and at the same time enable its owners, by its increased receipts, to furnish the same.

I will remark that I have strenuously endeavored to avoid the too common error of *under-estimating* the cost of the work to be done; an error by which many companies have been induced to embark in enterprises, with insufficient means to complete them; resulting always in great embarrassment, and sometimes in insolvency.

It will be seen by the foregoing, that the cost per mile is estimated at $16,473 79, which, when compared with the cost of some of the leading roads in the United States, presents your road in an aspect that should be most encouraging to its projectors and stockholders.

NAMES OF ROADS.*	COST PER MILE
Baltimore & Ohio R. R.,	$56,406 00
Weston (Mass.),	63,234 00
Boston & Lowell, and branches,	70,571 00
Boston & Maine, and branches,	47,350 00
Boston & Providence, and branches,	70,952 00
Boston & Worcester, and branches,	71,654 00
Connecticut River,	58,812 00
Phila., Wilmington & Balt., & branches,	50,974 00
Central (Georgia),	17,052 00
South Carolina, and branches,	28,785 00
Georgia Railroad,	17,862 00

Having seen what will be the probable cost of the road, let us examine into the means of the company to build it.

The act of Congress grants alternate sections of land, for six miles on each side of the railroad, that is to say, six sections, or 3,840 acres, which amounts to 564,480 acres, for the whole distanee of 147 miles. In the event that the alternate sections, within that distance, fall upon land that is already taken up, or which, being overflowed, belongs to the state of Arkansas, the company have the right of *floating*, as it is termed, fifteen miles, for the purpose of finding land that is vacant. That being the case, the company could hardly loose ten per cent. of the granted lands, for the lack of unentered lands; but considering that some, although a very small portion, will fall upon mountains that border upon the line, it is probable that ten per cent. loss, on the whole grant, is not far wrong. This would leave 508,032 acres, available for

*Taken from a report of S. G. Jones, engineer of the Muscogee railroad, Ga.

the constructien of the road. The public lands, when far from the facilities of transportation afforded by railroads, are held at a dollar and a quarter per acre, and the most of them, in the settled portions of the Union, have been taken up at that price. By this process has this great nation extended itself, from a narrow line of settlements along the Atlantic coast, until the inhabitants of our western borders begin to consider their brethren on the Pacific almost as much their neighbors as those on the Atlantic. But the process will not stop here. The territory of Kansas on the north-west, and the state of Texas on the south-west, are rapidly settling up, leaving Arkansas, still with a sparse population, in the rear. But why does not the emigrant come tu Arkansas? Because the Arkansas river is only navigable fur a few months in the year, and at the wrong season for emigration; because, when he comes,* he sees the evils of a lack of facilities for transportation to be so great, he is unwilling to encounter them; and furthermore, because, considering Arkansas comparatively an old state, he thinks all the desirable lands have, of course, been taken up, and therefore, that it is not worth the very considerable amount of time and trouble which would be necessary to enable him to visit it. But give those who are seeking a home in a new country the prospect of convenient means of intercourse with "the rest of mankind," and the fine lands which border on the line of the projected railroad from here to Little Rock, will be sought after and settled with avidity, the prices of entered lands will be greatly enhanced, and the un-entered lands which will attach to the adopted route, if in the hands of a well-managed company, would almost pay for the building of the road. Already, between this place and Dardanelle, the country is, in some sectiuns, being rapidly settled by emigrants.

Knowing as I do, huw greatly the building of a railroad enhances the value of lands adjacent to them, I have no hesitation in valuing the 508,032 acres that are available for the construction of the road, at $3 per acre, which will make an aggregate of $1,524,096. This amount, deducted from the estimated cost of the road, $2,422,964, leaves a balance of $898,866, to be raised by subscription. It is needless for me to discuss the modus operandi by which the money based upon the granted lands is to be raised, to assist in building the road. That is more particularly the business of the financier, and will, doubtlessly, be properly attended to, and be found perfectly practicable, when the proper time arrives.

It is apparent, if the foregoing estimate be correct, that this company have the ability, by raising the sum of $898,869—or say, $1-000,000—to build a road which will cost $2,-422,935, and which, when compared with some of the leading railroads in the United States, is very cheaply built at that. Is it possible, if they get the grant of lands, that they will hesitate or falter in so inviting an enterprise! Self-interest, patriotism, every motive which can be brought to bear upon the subject, would seem to urge them forward.

Memphis and Helena are each stretching forth the hands of friendly and profitable intercourse to you, and inviting you to meet their advances; while Napoleon and Pine Bluff, though somewhat tardy in their movements, seem disinclined to give up their chance of a connection, by railroad, with this fine region of country.

It is needless for me to make an estimate of the amount of business that will be done by the road. In the report which will be made by the president of the company, that question will doubtlessly be discussed with more ability and knowledge of the facts, than I can pretend to. I will remark, however, that notwithstanding the proprietors of the road will have to look to the future for a heavy business (arising from an increase of population), yet the stimulus to industry and enterprise resulting from the operation of a railroad, would cause an increase of production, even in this sparsely populated country, that would astonish any one who had not seen the same cause produce like effects. It would be a valuable auxilliary to the missionary and schoolmaster, in civilizing the semi-barbarous Indians who inhabit your borders and make them producers, instead of consumers only, as they have heretofore been; and the rapid influx of population, would, undoubtedly, soon make a business for the road which would place it on equal footing with similar works in the older states.

I have said nothing of the coal, which is found of good quality in many places not distant from the line of the road, between here and Dardanelle; nor of the lead mines which lie near it, some fifteen miles north of Little Rock. These elements of wealth, and of profit to the road, it will take time to develope, though we may reasonably expect that at no very distant day, coal, and secondarily lead, will be articles of prime importance in its business.

Nothing has been said in this report, either of the Great Pacific railroad, which, it is believed, should not at all be brought into the question of a railroad from here to Little Rock. If the former should be built to this place, the latter, or some other railroad to the eastward, must necessarily go forward, whether with or without the aid of those who are engaged in the present enterprise. Therefore, as the "Pacific railroad" is a good thing of doubtful attainment, a dependence on which would paralyze the energies of your citizens, and thus, probably, deprive them for an indefinite period of the benefits of a railroad, it would seem to be the part of wisdum to leave it out of the question altogether, and, with proper self-reliance, bend all your energies to the accomplishment of your purposes, with the means you have at your command.

Before closing this report, I wish to tender my grateful acknowledgements to those gentlemen along the line of the road, who have rendered me assistance in getting a correct knowledge of the country. I am indebted to Captain Barney, the accomplished engineer of the Fort Smith branch of the Cairo and Fulton railroad, for his kindness in furnishing me with several facilities for prosecuting my office work. I take pleasure, also, in acknowledging my indebtedness to Messrs. Going and Calhoun, my assistants, and to the other young gentlemen who formed my corps, for their zealous and efficient assistance in the labors of the survey.

Respectfully submitted,
R. L. HUNTER, *Chief Eng'r.*

*Here now, in the month of August corn is worth a dollar and a half a bushel, and no chance to get a supply until the river rises next spring.

☞We learn from the Selma Reporter that the bridge over the Coosa river, is in such a state of forwardness that the cars could cross it now.—

CENTRAL OHIO RAILROAD.

The completion of our railroad connection with the great West, was celebrated on the day of the opening of the Central Ohio Railroad, on Wednesday last, 15th inst. As the particulars of that occasion have already been published in the daily papers, we will not at present attempt anything more than a recapitulation of a few facts with reference to the position and prospects of this highly important acquisition to our system of internal improvements.

The Central Ohio Railroad begins, as is well known, at the town of Belair, on the right bank of the Ohio, four miles below Wheeling, and thence traverses, in a course almost as direct as an air line, through the populous and fertile counties of Guernsey, Belmont, Muskingum, Licking and Franklin, terminating at Columbus, the capital of the State, its length being 137 miles. By the Census returns of 1850, we find that the Counties above mentioned embrace 1,654,446 acres, or 950,533 acres of improved, and 703,-913 acres of unimproved land, the value of which was estimated at $35,000,000; the same counties produced in 1850, 448,521 head of sheep, 190,000 head of hogs, 1,427,081 bush. wheat, 6,637,728 bush. corn, 1,258,000 bush. oats, and 3,400,000 lbs. tobacco. The construction of the Road itself is of the most complete and substantial character. The route passes through no less than six tunnels, two of them being upwards of 500 feet in length; there is also some 3,000 feet of tressel work.

The Central Ohio Railroad, in connection with the works West of Columbus, reduces the distance from Cincinnati to Baltimore to but 636 miles, which can be travelled by the present arrangement in 28 hours, and it is in contemplation to reduce the time to 24 hours, or one full day, without any additional expense or risk to passengers. There is no question but that it will very shortly establish itself in public favor as *the* route of travel between the East and the West, and it requires but a steady purpose and proportionate enterprise on the part of our citizens to make it also the great medium of trade between the two main sections of our country.

It is a source of much gratification that the finances of the Central Ohio Railroad Company have been so ably and successfully managed during the almost unprecedented embarrassment which has characterised the money market within the past year; for which great credit is due to the indomitable President, Mr. Sullivan, and to our own citizens, who, through the influence of Messrs. Robt. Garrett & Sons, have subscribed about one million five hundred thousand dollars in the Bonds of the Company. In the present able and energetic hands, we hazard nothing in predicting that the enterprise will full soon justify all the expectations of its most sanguine friends.—*Price Current, Bal., Nov.* 25.

RAILROAD DIRECTORS.—We learn from the Hannibal *Courier*, that the following gentlemen were chosen directors of the Hannibal and St. Joseph road, at a recent meeting of the stockholders, in that city:

R. M. Stewart, John Corry, St. Joseph; Z. G. Draper, Hannibal; Joshua Gentry, Marion Co., R. B. Forbes, Jno. E. Thayer, H. Hannewell, T. B. Curtis, Jno. M. Forbes, Boston, Mass.—*Mo. Journal.*

HENDERSON AND NASHVILLE RAILROAD.

At a meeting of the board of directors of the Henderson and Nashville railroad Company held in Madisonville, on the 9th inst., it was deemed expedient by the board that a publication be made, acquainting the public, and particularly the stockholders, with the fact of important negotiations having been recently made in London, during a recent visit made by the chief engineer, Mr. Seymour, and myself, which it is hoped will be gratifying to the friends of the road.

A contract was made for six thousand tons of iron, (enough to lay a track of sixty miles,) for which we agree to pay 2½c in bonds of the company at par, (being 30 year 7 per ct. bonds,) and the remaining ⅓ in cash, which may be regarded highly favorable, and showing that it is a project in which the English people have much confidence.

The delivery of the iron will commence during the month of February or March, and will be delivered in quantities as may be required, and as the grade of the road is completed, and made ready for its reception, until the whole be delivered.

We also arranged for a portion of cash, which will be held subject to my order during the next month, which will enable us (together with anticipated payments made by the stockholders,) to commence the work again in December; and we confidently expect and hope from that time the work will progress uninterruptedly. It is expected, however, that the efforts of the directory will be promptly seconded by the stockholders, and that each and every stockholder will come up to the work and do his work promptly, by paying the instalments due upon his stock. Let us have no shuffling or dodging, but let every man come up to the work and do his duty, his whole duty, and there is no doubt but that during the next summer the snort of the "Iron Horse" may be heard in your forest, some distance from the Ohio river wending his way to Tennessee.

We have recently had promises from influential gentlemen to aid us in procuring an increase of our stock, and if a general feeling of the kind existed all along the line, it would materially lessen our debt; and instead of building a road with a debt, we would be enabled to build it without a debt. There are many individuals living within the influence of this road, who have not as yet taken any stock; it is hoped that as they see their friends and others exerting themselves in a common project, which is for the general benefit of the whole, that they will not stand out longer, but like *men*, like liberal citizens, will come up and take part and give this great project their aid and influence. Any officer of the company is authorized to receive subscriptions of stock.

E. C. SEBREE, Pres't
H. &. N. R. R. CO.

Nov. 15th, 1854.
Henderson Reporter.

CINCINNATI AND CHICAGO RAILROAD.—There is a manifest determination to push this road through as fast as circumstances will allow. A quantity of iron for the track was shipped from Cincinnati on last Monday, intended for the road, but the train broke through a bridge this side of Collinsville on the Eaton & Hamilton railway, letting cars, iron and all into the creek—fortunately no one was injured. The iron will soon be hustled on through to the first point needing it, and the track continued. It is confidently expected that the road will be completed as far as Logansport early in the coming summer. The Hon. Caleb B. Smith, the worthy and talented President of the road, has been spending a few days in Newcastle during the past week, attending to the duties of his office. Mr. Smith deserves a great deal of credit for his exertions in behalf of this enterprize, and we have no doubt his labours will be crowned with success. The Chicago railroad will be, when finished, one of the very best roads in the West, and when the incalculable advantage it will be to the scope of country through which it will pass, is considered, there certainly should be no lack of means to carry it forward to a speedy completion.—*Newcastle Courier, December 1st.*

Miscellaneous.

UNION COLLEGE.

We would call the attention of such of our readers as are interested in the education of Engineers for railroads and mines, to the advertisement of this institution, in another place.

It is comparatively a new feature in education to prepare a young man for out door life, by taking him into the field, and giving him the actual duties of field labor. It has been far too common an error to suppose that the study of the science of language as it is beautifully exemplified in the noble languages of the ancients, is all that is necessary to constitute a complete education. And to this end all the efforts of professors have been too much directed. We know of venerable institutions in our own as well as foreign lands, which tax the memory of their students to retain every dialectic form of languages long disused. Now, we conceive that the great principles of language, as exhibited in the most elegant and finished state of the literature of the nation, is, after all, that which will tend the most to perfect the knowledge of our own,—that to compel the student to remember each variation which the rude state of the uneducated, or the frequent intercourse with neighboring states, introduced among the inhabitants of different portions of ancient Greece, can serve no other purpose than to amuse the curious or show that the most finished and elegant languages are liable to corruption, a fact which the gradual differences creeping into our own tongue will amply testify. We know that it is a most excellent exercise for the memory; the arbitrary committal of any class of facts is invaluable for strengthening and improving this faculty, but where can there be found a better opportunity for this exercise than in those sciences which now constitute the elements of usefulness in life. We would not underrate the value of classical attainments, they, in their proper sphere, are invaluable, and in the Institution, whose advertisement has prompted these remarks, receive a prominent share of attention, but this we do say, that the great object of classical study should be to obtain a knowledge of the *principles* of language, to fit us to make proper use of our own, and this, if properly pursued, is at once a study and a pleasure, and gives elegance and refinement to the taste; but elegance and refinement are not all that constitute education, and we hail it as a good sign that our most valuable and classic institutions have already established practical departments to be pursued either separately or in connection with the favored languages of antiquity.

☞The great bridge across the Mississippi, at Davenport, Iowa, is progressing steadily.

CLEVELAND PIER.

Captain Howard Stansbury, government superintendent of the public works upon Lake Erie, from Conneaut to Monroe, has been doing good work for Cleveland harbor.

The old West Pier was constructed of crib work filled with stone, and protected, as was supposed, by a slanting breakwater of loose stone, which, however, proved a chief cause of its demolition.

Since its almost total destruction, a plan for rebuilding the West Pier was submitted to, and adopted by, the department. It proposed the construction from the shore, just west of the old stone wall, and supported by it on the east, of a pier of substantial crib work, 750 feet in length and 12 in width, to which should be added at the northern extremity 60 feet, 20 feet in width; the old pier to be repaired and put in perfect order; and the space between the two to be bridged and planked, the whole forming a pier 60 feet wide at its northern end, and narrowing to a width of 50 feet at the shore. The estimated expense was:

For New Pier	$19,910 00
" Repairing Old Pier	10,342 20
" Bridging	9,223 43
Total expense of West Pier	$39,475 63
By storms and collisions, the East Pier had been much damaged, and repairs, and the work necessary for its completion, would cost	26,143 15
	$65,618 78
In the Treasury, appropriated for Cleveland Harbor	25,000 00
Leaving to be appropriated	$40,618 78

Agreeably to the plan adopted, Captain Stansbury began work upon the west pier on the 28th of August, and under the immediate superintendence of Mr. Nelson Burington, as foreman, it has progressed with great rapidity. Already 450 feet of cribs have been sunk, filled with stone taken from the old pier and breakwater, and the pier work five feet above the surface of the water placed upon them. All the timber used is one foot square, and each timber of the pier is secured to the cribs by iron bolts 1½ inches in diameter, and 3 feet in length, which will prevent springing from the action of the water.

The work is substantial and perfect as it was possible to make it; and it is a matter of surprise that so much could have been so rapidly and well done with a force averaging only fifteen men. In the Spring the work will be resumed and pushed to speedy conclusion.

We understand that the railroad companies upon the west side, at the earliest possible time, propose building wharves upon their lake front, extending half a mile from the west pier; and also parallel with this and of the same length, from the north end of the west pier, docks wide enough for warehouses. This would allow vessels to load and discharge cargoes from either side the last named wharves; and would form inside it a safe harbor, half a mile in length, with a width of 800 feet.

We also learn that the government have determined upon replacing the present beacon light upon the east pier, with a powerful French revolving one.—*Clev. Herald.*

☞ The total amount of capital invested in Railroads in Great Britain up to December, 1853, was £366,769,732, of which £10,159,276 was authorized during 1853.

Monetary and Commercial.

We have but little to add to our report of the last week, in regard to financial affairs. We have had a quiet but stringent market. It is pretty well understood that none but first class signatures could meet with accommodation under any circumstances, and consequently there is very little paper offering. The banks are still refusing all offers, and the merchants having settled down with a conviction that they must help themselves, are expecting but little aid, contraction has been the order of the day.

There is, however, another feature which may under some circumstances be of importance in this connection. Heretofore the difficulty of getting money has fallen principally on the business community, and especially on the manufacturer, the workpeople have not suffered in proportion to the employer, but now this class of community is beginning to feel the effects of contraction. Many establishments are either doing nothing or only employing half their force, and consequently great numbers of persons have lost employment and the means, if not of subsisteuce, at least of procuring many little luxuries which constitute a great part of the trade of the retail dealer. This will produce its effect in the retail business, and exert a corresponding influence on the wholesale.

The river has remained unusually low till within a few days, when the weather gave indications of a rise, and steamboatmen began to prepare for navigation; but unfortunately the rise was only temporary, and the few boats that ventured to start took half freight.

The stock market, owing to the prevailing disposition to inactivity already noticed in business circles, is destitute of anything approaching auimation. The ruling rates are already so low that necessity alone can compel the offer of stock, and under these circumstances it should not be judged that the intrinsic worth of the script has been obtained. We quote to-day some of the transactions of the past two weeks.

Eastern exchange is dull and extremely low. The bankers are buying at ½ per cent. and selling at from ¾ to 1 per cent. This is a favorable indication. and joined to the fact that the same is noticed in New York with regard to the exchange on London, gives some ground to hope for changes for the better.

At the East, there is but little to note; there is some slight improvement for business men, but parties whose engagements require them to borrow on stock security find much difficulty in negotiating loans. It is also noticed that real estate security is not regarded with much more favor than stocks. Strictly first class mercantile paper is received with more favor, and the Banks are doing a fair business for their customers on short time. We quote rates ranging from 10 to 12 and 15 per cent. for first class.

Exchange is dull. The bankers are drawing bills at 109 per cent., mercantile houses at from 108 to 108½

GREAT WESTERN RAILWAY.

AUDIT OFFICE,
Hamilton, 18th November, 1854.

Amount of Traffic on the Great Western Railway for the week ending November 17, 1854.

GEORGE DARTNELL.

COVINGTON & LEXINGTON RAILWAY.

This road was opened through to Paris in October last, and the earnings have already began to be quite large:

The Receipts for September, 1854	$15,003 11
The Receipts for October, 1854	19,137 15
The Receipts for first 18 days of Nov., 1854	16,333 45

The receipts thus far in November are over 70 per cent. increase on October; and for the week ending 18th inst., were $7,251 82.

Office Terre Haute & Richmond R. R. Co.

The Receipts of the Terre Haute & Richmond Rail Road for the month of November 1854, are	$28,128 57
November 1853 was	19.108 53
Increase,	$9,020 04

HEMPFIELD RAILROAD.—We learn from the *Washington Examiner*, that at the meeting of the stockholders of this road the old board of directors was re-elected, and Mr. Conrad retains the presidency until some other person is fouud for the place. Mr. Smith, the acting chief engineer of the company, reported that the requisite sum required to finish the road between Washington and Wheeling would be about $300,000, exclusive of the cost of the rails. A resolution was also passed at the meeting authorizing the directors to borrow one million of dollars on the credit of the company. "When," says the *Examiner* "it shall have been ascertained where the money can be obtained, we will feel encouraged by the action in that behalf."

MEETING OF TAX PAYERS.

A meeting of merchants and others interested in the equalization of the tax laws, was held on Saturday evening, and the following preamble and resolutions adopted:

PREAMBLE AND RESSOLUTIONS.

WHEREAS, The Auditor of State clearly transconded the duties of his office in instructing County Auditors to list credits for taxation, without allowing the lawful assets and deductions therefrom, arrogating to himself extra judicial and legislative prerogatives in declaring certain provisions of the Tax Law of 1852 null and void, "no longer a portion of the law," and filling the void thus declared to exist in accordance with his personal views and private interpretations; And, Whereas, The Auditor of Hamilton County, in meek submission to these despotic and unlawful instructions of the State Auditor, uniformly refused to receive schedules of personal property, listed in strict conformity with the statute law and constitutional requirements, even when oath or affirmation was proffered to the same; And, Whereas, As a consequence of these high-handed measures of mere ministerial officers, great want of uniformity in the method of listing property obtains throughout the State, amounting in Hamilton County to a chaos of favoritism and injustice; And, Whereas, The fundamental law of the Commonwealth declares that "no power of suspending laws shall be exercised except by the General Assembly," (Sec. 18, Art. 1, of Con.,) and again, that "no tax shall be levied except in pursuance of law, and every law imposing a tax shall state distinctly the object of the same, to which only it shall be applied," (Sec. 5, Art. 12, Con.,) Therefore,

Resolved, That we will not pay taxes on personal property assessed under the late instructions of the State Auditor, unless the same instructions are affirmed and sustained by the highest tribunals known to our laws.

Resolved, That in no spirit of factious oppposition, but as law loving and law-abiding citizens, for the peaceful testing of a great fundamental principle, we again bind ourselves to stand by each other on all necessary occasions; and in case of distraint by officers of the law, that we will purchase no property so distrained and offered for sale, repudiating all who, under such circumstances, shall purchase, as therefore unworthy our association and confidence; and that with an abiding faith in a just and true issue, we hereby re-affirm in every particular our tax-pledge.

CHEMICAL FILTRATION OF WATER.

PREVENTING INCRUSTATIONS OF BOILERS.—An important improvement has been made in the filtration of water—chemically—for the purpose of removing all the lime held in solution, so that naturally, hard water can be safely employed for steam boilers, without the fears of causing incrustations. The nature of the improvement consists in providing an upright cylindrical vessel, divided into different compartments, the upper one being filled with stones, the next containing bróom brush, and the lower one some suitable substance, impregnated with some such free alkali as ammonia, which is always to be obtained cheaply in some kinds of stable manure. The water to be fed into the boiler is passed through this apparatus, being first heated at the top of the cylinder, by contact with the exhaust steam, to a temperature of about 70° degrees, which causes the liquid in passing over so many substances to deposit all the incrusting matter which it had held in solution, thus rendering the water perfectly pure when it arrives at the boiler.

This method of purifying water for steam boilers is the invention of G. Weissenborn, of this city, who has taken measures to secure a patent for the same.—*Scientific Am.*

THE BELLEVILLE & ILLINOISTOWN R. R.

This little road, fourteen miles in length, built, and we believe owned, by Messrs. Sanger, Camp & Co., is already doing a better business than was anticipated. Additional rolling stock is being forwarded from the city, including a splendid passenger car. The heaviest business of the road will be the conveyance of coal to St. Louis; the Belleville coal fields being almost inexhaustible and of superior quality.

In this connection we would state, upon what we deem reliable authority, that the *Alton Extension*, which is built under the charter of this road, will be hurried to completion. The grading is nearly finished, and the ties for the superstructure upon the ground. We are informed that the iron will be delivered at New Orleans by January 1st, 1855, and as the length of the road is but 22 miles, we may anticipate its completion by the opening of Spring or sooner. It will be a successful competitor with the great Mississippi for the tide of travel, and must be of large benefit to both Illinoistown and Alton. —*Dem. Press, Chicago.*

NORTH CAROLINA STATE DEBT AND RAILROAD SYSTEM.—The debt of the state of North Carolina amounts to $8,800,000; the revenue from all sources is estimated at $200,000. As this sum is not sufficient to defray the state expenses and discharge the annual interest, a scheme will be proposed to the next legislature to increase the taxes. The late loan of $260,000 was taken at Raleigh at 100 1-2. The state is pursuing its system of internal improvements, and several of the railroads in which it is interested have commenced paying dividends. Wilmington and Raleigh railroad, after sixteen years' struggle has been able to clear a semi-annual dividend of four per cent.; the Raleigh and Gaston railroad has just declared a dividend of six per cent. for the last year; and the recently completed Wilmington and Manchester railroad, in its first year, gives evidence of being good stock.—*Balt. Am.*

CIVIL ENGINEERING.

COURSE OF INSTRUCTION IN UNION COLLEGE, SCHENECTADY.

UNDER THE DIRECTION OF PROF. W. M. GILLESPIE.

THIS department will re-open on January 5th 1855. It comprises thorough instruction and practice in all the branches necessary to fit students for prosecuting advantageously this important profession. Among its subjects are Drafting (Mechanical, Isometrical, &c.;) Surveying (Land, Maritime, Mining) with Compass, Transit Theodolite and Sextant; Location of Railroad Curves; Levelling; Roadmaking; Mensuration and Calculation of Earthwork, Masonry, &c., the Strength of Materials, and Stability of Structures; Principles of Construction of Masonry and Carpentry; Bridges; Canals; Waterworks; Practical Astronomy, &c. The above subjects are pursued in connection with such of the regular college studies of Mathematics, Natural Philosophy; Modern Languages, &c., as are desirable. The Fees for both, including room rent &c., are the same as to the ordinary college course, $19 per term, and $7 entrance fee. Students may pursue any of the above branches for which their previous acquirements fit them. A thorough and ready knowledge of Arithmetic, Geometry, (Plane and Solid) and Algebra (through equations of second degree) is necessary for those *Commencing* the course. If further information is desired, address

Railroad Printing.

WE have now attached to this office an extensive **Composition** and **Press Room** and **Bindery**, under the personal supervision of the proprietors of the RECORD. With confidence, therefore, we call the attention of RAILROAD OFFICERS and others to our extensive establishment, containing every facility for turning out superior work in any and every department of the PRINTING BUSINESS.

We are fully prepared to furnish **Railroad** and other **Reports**, with or without **Maps** or other **Illustrations**, gotten up at short notice and in superior style. Also, **Blanks of any description**, adapted to the wants of the various departments of the **Railroad service**, and to the wishes and tastes of the parties.

Also, **Railroad Tickets** and **Conductors' Checks**. Our patent **Card Press**, enables us to supply any demand at **Short Notice** and in **Unequalled Style**.

Also, **Blank Books**, ruled to any pattern, with or without **Printed Headings**, and bound in the most substantial manner.

With the numerous facilities for doing the **Best Work**, we feel no hesitancy in promising full satisfaction to all who may favor us with their orders.

GAS.

AUBIN'S PATENT.—We are agents for this new and improved furnace, and having had one in operation at our office for several months past, can confidently recommend it as being simple in its operation, occupying little room and furnishing a pure and beautiful burning gas. From the peculiar arrangement of the retort it is not liable to *burn out*, thus saving a great part of the expensive repairs of other furnaces. We are prepared to erect these furnaces at our own risk and warrant them to produce good gas.

CHARLES FRODSHAM'S

IMPROVED WATCHES!

BEGGS & SMITH,

JEWELERS,

No. 6 West Fourth St.,

Adjoining the First Presbyterian Church,

CINCINNATI, O.,

HAVE received from Mr. Simon Willard, Boston, Agent for the United States, the sole and exclusive agency for the sale of **CHARLES FRODSHAM'S** NEW SERIES OF IMPROVED CHRONOMETER WATCHES, in the states of Ohio, Indiana, Illinois, Michigan, Iowa, Wisconsin, Missouri, Kentucky and Tennessee.

In the Watches of the New Series, Mr. FRODSHAM has succeeded by a more perfect method of compensation, a more correct adjustment in isochronism, and an entirely new and peculiar construction of the train, by which more power is obtained without increase of size, in producing timekeepers of wonderful and unrivalled accuracy. The great importance of the improved watches is a perfect regularity of time under every variety of climate, motion and position. So perfect are the adjustments, that the most violent exercise, such as horseback riding, jumping, etc., produces on them no sensible effect They are therefore, particularly adapted to Railroad purposes.

Liberty is given to refer to the following gentlemen, who, among many others, have proved the excellence of Charles Frodsham's Watches as timekeepers:

Gen. John S. Tyler,		Massachusetts.
John E. Thayer, Esq.		"
Enoch Train	"	"
E. C. Bates,	"	"
F. W. Thayer,	"	"
Wm. Whiting,	"	"
Geo. M. Thacher,	"	"
David Dyer,	"	"
Alvin Adams,	"	"
Billings Briggs,	"	"
David Weld,	"	"
Hon. Ebenezer Lane,		Sandusky.
E. F. Osborne, Esq.		Ohio.

The Prices of the New Series Gold Cases, are According to Size, viz:

SIZE 12	
" 14	$230
" 16	
" 18	250
" 20	275
" 22	300

Recommendations:

Boston, Sept. 3, 1853.

The Compensated Lever Watch I purchased of you, made by Charles Frodsham, London, No. 7300, has varied but thirty seconds from mean time in six months, by actual daily comparison with your regulator.

Yours, &c., ALVIN ADAMS.

Mr. Simon Willard.

Boston, Feb. 4, 1854.

Mr. S. Willard Dear Sir—The Frodsham watch, No. 7557, I purchased of you last October, has performed wonderfully well. I have compared it almost daily by your Astronomical clock, and its variations for ninety days is but one second, or a loss of but one-hundredth of a second per day. I consider it better than any Marine Chronometer I ever used.

Yours truly,
FISHER A. NEWELL,
Late master of Sch., Honolulu.

Sandusky, Ohio. Jan. 1, 1854.

Mr. S. Willard, Dear Sir—More than six months ago I purchased of you two of Frodsham's best watches—up to this time, one of them, No. 7571, has altered from mean time but twenty-seven seconds, and the other, No. 7517, but twenty-three seconds in the same period.

Yours, respectfully,
E. F. OSBORNE.

To Mr. Simon Willard.

Gentlemen—On the 1st of April last I procured from Mr Willard, of Boston, one of Frodsham's improved series of watches. It was regulated and set to Cincinnati time. It has not, in that period, been suffered to run down, nor have the hands been moved, and to day it is 20 seconds only slow. Respectfully yours,

HENRY O. AMES,
Sup,t Cin. Ham. & Dayton Railroad.

August 18, 1854.

To Messrs. Beggs & Smith.

The following is an extract from a letter of William Brown, Esq., Springfield, Ohio, engineer on the M. R. & L. E. R. R., who has personally kept the rate of several of Frodsham's watches.

"Finally from what I have known of Frodsham's watches, I am very strongly impressed with the idea, that they are a decided improvement on all other timekeepers, and were they set in gimballs and used with the same care, I think their performance would equal that of Mr. Frodsham's celebrated box chronometer, and would answer the same purpose for determining longitudes."

DENNEY'S DIVIDED CAR AXLE.

PATENTED JANUARY 31ST, 1854.

THE ATTENTION OF RAILROAD COMPANIES is respectfully invited to an examination of the merits of this valuable invention, which offers to add largely to the safety of life and property.

The valuable features of this arrangement of axle are, a saving of full fifty per cent. in motive power on crooked roads: the rails are protected from being destroyed by the flanges of the wheels coming in contact with them on the curves, as is the case with the stiff or rigid axle, which not only destroys the rail but puts a constant strain upon the wheel and axle, causing the wheel on the inner rail to trip or revolve upon the rail under the weight of the car and its load, while the opposite wheel is traversing its greater distance; the tendency of which, is to wear the wheel flat, and cause it, or the axle, to break sooner or later. There is less danger of the car leaving the track from its having become spread.

Axles fitted in this way do not require to be near so large, and yet contain more strength than the common axle, for the reason that the liberty given to the wheels, which allows them to accommodate themselves to the curvatures of the road, removes wholly the strain thrown upon the ordinary axle; and therefore, it requires no more strength of iron at any point between the wheels, than is contained in the bearings, which in the ordinary axle, is not more than one-third of the strength of the other portions of the axle.

The elongated bearing which forms the connection is so proportioned as not to wedge or become tight in the alloy, the wear being almost imperceptible, requiring to be set up not oftener than once in twelve months, by a slight tightning of the screw nuts. If, from long service, the alloy becomes worn out, it can be refilled, making it as perfect as when first filled up, and the gauge of the wheels will never become changed so as to injure the running of the car.

It is after a series of the most careful experiments, conducted through a period of time sufficient to test in the most satisfactory manner, the real merits of divided car axles, and a thorough and practical test in real service of over two years, that we now offer to Railroad Companies one that we are assured will give universal satisfaction in its operations, and both simple and cheap in its construction.

We are now ready to dispose of rights to use the above axle on the following terms: We guarantee full and perfect satisfaction by giving ample time to thoroughly test its merits, and will require no payment to be made until such satisfaction has been given. All applications to be made to

SAMUEL L. DENNEY,
Christiana, Pa.
Or, to **CHRISTIAN UMBLE,**

y.10†

TYLER DAVIDSON & CO.,

Agents for the

BOSTON BELTING COMPANY

India Rubber Machine Belting in any quantity, from 2 to 20 inches.

India Rubber Steam Packing;

Mixed	do	do	1-32 to ¼ inch thick.
Plain	do	do	1-32 to 1 inch thick.
Pure	do	do	

Pipe and Manhole Rings, all sizes;
Square or Rope Packing, do.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agent of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and possessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.

2d, They are a great deal cheaper.

3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations. This is a new and important invention. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the COLDEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils, 10 casks, assorted weights now in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Leland's Superior C. S. Car and Auger Bitts.—All sizes.

Brass Kettles, and Sheet Brass, &c.—Brass Kettles, assorted from 6 to 30; Sheet Brass assorted from No. 0 to 30; Brass Wire, do do do.

Star Breast Chains.—Four casks of those superior double-linked Chains, just received.

Walker's Trace Chains.—70 casks of those superior goods, warranted full length and sizes, 8 to 20 links, straight and twisted, now in store.

American Anvils.—Eagle brand, faced with with cast steel, and warranted by the manufacturers equal to Armitage's Mousehole.

Plated Spoons.—Plain, tipped, and threaded heavy plate, on best quality of German Silver.

Premium Gimlet Screws.—10,000 gross just received.

RAILROAD MAP.

WE have now ready A RAILROAD MAP OF THE WEST, containing ALL THE RAILROADS constructing, completed, or proposed in the States of Ohio, Indiana, Illinois, and Kentucky, and portions of Wisconsin, Michigan Pennsylvania, Virginia, Tennessee and Canada, showing the termini, points upon the lines, connections, &c. of each line, all laid down accurately, by a competent hand.

The size of the sheet is 24 by 38 inches, and can be sent by mail.

Price—plain..... 40 cents.
Colored in outlines..... 50 cents.
Full colored ..... 75 cents.

Liberal discounts will be paid to those wishing them in quantities.

Railroad companies desiring a map to illustrate their road cannot find one offering greater inducements as to correctness, &c., or on better terms; as any line can be made prominent, with its connections, &c.

All orders addressed to U. P. JAMES will secure prompt attention

RAILROAD HOTEL.

CINCINNATI, O.

THE GIBSON HOUSE, Cincinnati, is situated on Walnut-street, between Fourth and Fifth, in the immediate neighborhood of all the Railroad Offices. For comfort and convenience it is believed that this hotel is unsurpassed. It is heated with steam from the first floor to the fifth, thus making it the most desirable winter house in the West. The proprietor hopes to enjoy a share of the patronage of Railroad men.

A. WETHERBEE, Proprietor.

Baltimore & Ohio Railroad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was opened to the Ohio River in the spring of 1853. and has already established a high character with the business community of the West. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of the country through which it runs, and its many admirable provisions for the expedition, comfort and safety of travelers, it has received such favor as a passenger road, (with its present connections,) as to show that it will become the preferred route for all portions of the West and South-West as soon as its further connections are formed by the completion of the Central Ohio, North-Western Virginia and other Railroads now rapidly finishing.

FOR PASSENGERS BY THIS ROUTE,
Through Tickets from all Parts of the West,
ARE NOW SOLD IN
Cincinnati, Louisville, Madison, Indianapolis. St. Lonis, Chicago, Toledo, Detroit, Cleveland, Columbus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED

For Sending Travelers Direct to
WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION

The fullest accommodations are provided. In motive power and Cars, the company has abundant resources, which are being further extended to meet the demands of Western Trade. In the dispatch and regularity of transpart, and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road counects directly in the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in
AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Reservoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.

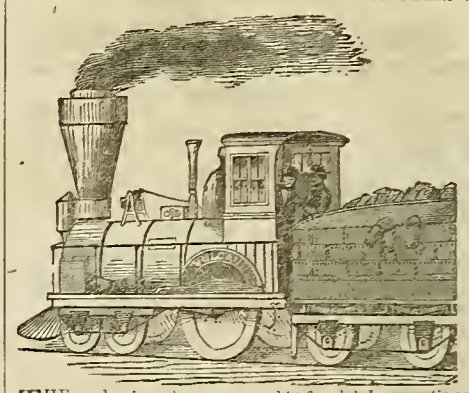
The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.
WILLIAM SHERBURNE,
PRINCIPAL AGENT,
May 18.6* Office, No. 167 Broadway, New York.

GUNPOWDER,
MANUFACTURED BY
The Hazard Powder Company.
HAZARDVILLE, CONN.
H. G. HAZARD, President.
A. E. DOUGLASS, Secretary.

THE undersigned are always prepared to furnish Mining and Blasting Powder to any extent, delivered at any point on the lines of railroads, or any other places of public improvements in the West or South, at the very lowest rates. Also, SAFETY FUSE of the best Eastern manufacture.



We would respectfully urge all contractors and consumers to call upon or correspond with either of us before arranging for their supplies elsewhere.

To the trade generally we would offer all the brands of Sporting and Rifle Powder manufactured by the above concern.
M. D. W. LOOMIS,
Southeast corner Main and Second Sts.

Myers' Patent Cylindrical Car.

NOTICE.—The Subscriber having become proprietor of MYERS' PATENT CYLINDER CAR, for a considerable portion of Western territory, including the State of Ohio, offers the same to Rail Road Companies on favorable terms. The public will be furnished within a short time with complete explanations of its operation, together with the results of actual experiments testing its applicability to all the uses for which it is recommended.
W. CLOUGH,
South-western Car Works.
Madison, Indiana. May 11.

Cincinnati Locomotive Works!

THE undersigned are prepared to furnish Locomotives equal in efficiency and durability to the best Eastern manufacture. Also, Shaping and Slotting Machines suitable for railroad shops. Also, all kinds of heavy forging and casting done at short notice. Also, bolts for bridges cut with dispatch.
ap. 20 MOORE & RICHARDSON.

ASHCROFT'S
METALLIC STEAM GAUGE.
(BOURDEN'S PATENT,

THE subscribers offer for sale this valuable Gauge. It is adapted to Locomotive and other steam boilers, indicating with accuracy the continual variations of steam within the boiler, enabling the Engineer to maintain a uniform and safe pressure. Any of the Eastern Railroads may be referred to for proof of its importance and value.
BRIDGES & BROTHER,

OHIO SCALE WORKS.

Rigdon, Ryland & Co.,

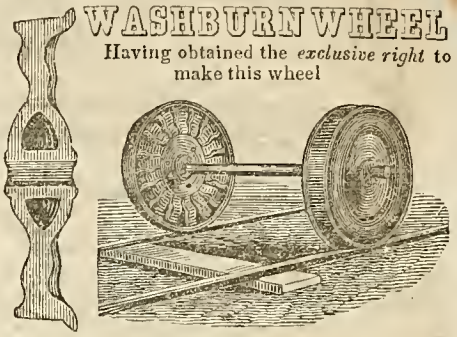
No. 39 Vine Street, between Front and Columbia streets,

CINCINNATI.

WE are now prepared to furnish **Railroad Track and Depot Scales** of all sizes, which we warrant in every respect equal to any manufactured in the United States.

Being practical workmen ourselves, we feel confident that we can furnish the West and South with as good an article and cheaper than can be bought East.

Cincinnati, June 29, 1854.



FULTON CAR WORKS,

CINCINNATI, OHIO.

THE Proprietors of this establishment would respectfully call the attention of Railroad Companies in the West and South to their establishment at Cincinnati.—Their facilities for manufacturing are extensive, and the means of transportation to the different points speedy and economical, They are prepared to execute to order on short notice, eight-wheeled Passenger Cars of the most superior description. Four or eight-wheeled Baggage, Cattle, Freight and Gravel Cars. Also, Crank and Lever Hand Cars, Trucks, Wheels, and Axles fitted.

WASHBURN WHEEL

Having obtained the *exclusive right* to make this wheel

In Cincinnati, Covington and Newport, they are now prepared to furnish Railroad Companies with that Celebrated wheel, with or without Axles. Also, Journal Oil Boxes of any pattern, and Castings for cars fitted to order at the shortest notice.

Address KECK & HUBBARD,
Fulton Car Works Cincinnati, Ohio.
ap.12 Office 62 East Second Street.

MUSKINGUM WORKS,

ZANESVILLE, OHIO.

DOUGLASS, SMITH & CO.

WOULD respectfully call the attention of Railroad Companies to their establishment at Zanesville

They are prepared to execute orders, on short notice, for

Passenger Cars of the most superior description,

Second Class Passenger, Mail Express, and Baggage Cars; Freight, Cattle, four or eight wheeled Gravel Cars.

We manufacture a superior

CAR WHEEL,

Over 2500 of which are now running on the Central Ohio Railroad, and many of those have been in use on the road over two years, having in that time only three to crack, and two to be renewed in consequence of the wearing of the Chill. We have also commenced the manufacture of the celebrated

WASHBURN WHEEL,

And are prepared to furnish this wheel, with or without axles. Also, castings for Cars fitted to order at the shortest notice.

BOLLMAN'S PATENT IRON & WOOD BRIDGE.

We are also agents and builders of the above celebrated Bridge. Are now placing upon the piers an iron bridge on this plan over the Muskingum river at Zanesville. We are ready to contract with companies for the construction of this Bridge. All orders addressed

DOUGLASS, SMITH & CO.,

Railroad Record.

E. D. MANSFIELD, - - - - - - Editor.
J. A. JAMES, W. WRIGHTSON, - - - Associate Editors.

CINCINNATI:

THURSDAY MORNING,.....DEC. 14, 1854.

E. D. MANSFIELD,

May be found at the office of the *Railroad Record*, 167 Walnut st., between the hours of 11 A. M. and 1 P. M.

ACKNOWLEDGEMENTS.

Life of P. Barnum, Written by Himself.—We are indebted to Messrs. Patterson & Clark for a first peep at this much expected book. In appearance, it certainly does credit to its publisher, Mr. Redfield of New York. We have no doubt, that like its author, it will take."

For sale by Patterson & Clark.

Report of the Memphis and Ohio Rail Road.—The Report of this Road was received too late for notice in the present number. Our thanks are due to our friends in Memphis, for the Report and Map, as well as the Copy of the Railroad Law of Tennessee.

Mobile and Ohio Railroad. — We have to acknowledge the reception of a Map showing the different sectional reservations, of the Mobile & Ohio Railroad Grant in the States of Mississippi and Alabama.

We thank our friends of this road for their attention, and shall be pleased to hear of the progress of their work.

LITTLE MIAMI RAILROAD.

RUNNING ARRANGEMENTS.

We would call the attention of those of our readers, whose business or pleasure will call them East, to the changes in the running arrangements of the Little Miami Railroad, whose advertisement will be found in the proper page of the *Record*. This road, by its connection with the great eastern and northern lines, forms a grand starting point for a great portion of the through travel between the West and East, and South and North.

THE ROCK BOTTOM.

This is the title of a spirited little sheet published weekly at Florence, Nebraska Territory. The editor, W. C. James, thus introduces himself: "Here 's our hand reader, neighbor, squatter, or whoever in this wide wicked world may accept such token of peace and friendly intercouse."

We accept the proffered hand, and wish our "squatter friend" success in his new enterprise.

RAILWAYS OF INDIANA AND ILLINOIS. REVIEW.

In reviewing Railways, we should remember that the whole system is in a *transition state*;—not only in business, but in creation. Hence, it is very difficult to ascertain precisely how many miles are in active operation, and how many are in such progress as to give a reasonable expectation that they will be completed. We have endeavored to do this as accurately as possible, but may leave out some which their projectors no doubt think will soon be completed, but which we think will not be done soon.

Indiana Railways are quite remarkable—not merely for their number and the rapidity of their execution, but the fact that not one of them (if we except that to Evansville) have any point of concentration *in the State*. We do not mean mere crossing, but *terminal object*. For example, the Jeffersonville R. R. has Louisville for its object. The Madison R. R. really transacts business for Cincinnati and Louisville. The two lines to Lawrenceburg and Richmond terminate at Cincinnati. The same is true of all the others. Indiana having no great commercial city, (although many large and flourishing towns,) is in reality a great field crossed by many highways, which carry off its surplus products, and bring merchandize to its cultivators. To do this, however, is the great business of railways, and accordingly railway enterprize has flourished there and proved profitable.

For want of a great commercial city,—and for the convenience of general intersection,—most of the railways of Indiana have been made to terminate at Indianapolis, the seat of Government, which has received, from this cause, a large accession of population, and is now a town of about 20,000 inhabitants.

The following is a list of the number and extent of the railways in Indiana, Dec. 1854.

ROADS.	COMPLETED.	IN PROGRESS.
Indianapolis & Cin.,.....	90 miles.	
Ohio & Mississippi,.....	67 "	108 miles.
Indiana Central,.....	67 "	
Indianapolis & Bellefontaine	84 "	
LaFayette & Indianapolis,	73 "	
Terre Haute & Richmond .	72 "	
Madison & Indianapolis,..	86 "	
Peru & Indianapolis,.....	73 "	
Jeffersonville, ...	77 "	
New Albany & Salem.....	288 "	
Shelbyville Branch,.....	16 "	
Shelbyville & Knightstown	26 "	
Shelbyville & Rushville,..	20 "	
Martinsville,.....	25 "	
Evansville & Crawfordsville	107 "	..... 53 "
Northern Indiana,.....	101 "	
Central Michigan,.....	40 "	
Wabash Valley.....	.....	.....175 "
Cincinnati & Chicago,.....	48 "	.....303 "
Ohio & Indiana,.....	20 "	
Junction.....	.....	..... 86 "
Fort Wayne & Chicago,..	.....	.....150 "
Cin. & Fort Wayne,.....	.....	.....114 "
Fort Wayne & Mississippi	.....	.....199 "
Toledo, Wabash&St. Louis	.....	.....175 "
Aggregate,	1,288	1,293

Of the above roads, the following general routes will be formed, when completed:

NORTH AND SOUTH.

1. New Albany & Salem,.....288 miles.
2. Wabash Valley,.....175 "
3. Evansville & Crawfordsville.....160 "
4. Madison & Peru,.....159 "
5. Cincinnati & Fort Wayne,.....114 "

EAST AND WEST.

1. Northern Indiana,.....104 "
2. Terre Haute, Indianapolis & Richmond 143 "
3. Ohio & Mississippi,.....175 "

CINCINNATI AND NORTHWEST.

1. Cincinnati, Indianapolis & Lafayette, 163
3. Cincin., *via* Junction to Peru,..... ....159 "
3. Cin., Cambridge, Newcastle & Chicago, 255 "
4. Cin., Ft. Wayne, to Chicago,.....264 "

TO THE NORTH-EAST.

1. From Evansville, the Wabash Valley, 175
2. " Louisville, *via* Jeffersonville, Indianapolis & Bellefontaine,..194 "

It is singular that out of *fourteen* great lines, formed as above, only *one*, the New Albany & Salem, really crosses the State, north and south. The other four northerly lines are only partial—not going to the northern boundery.

Of the *twenty-five* Indiana railways above enumerated, NONE lead directly to Cincinnati, and FIVE are intersected by roads leading to Cincinnati. Four of the remainder are branches; so that in fact, nearly the whole of Indiana Railways lead to or from Cincinnati.

Of the 91 Counties of Indiana, no less than *sixty* will have railroads in them. If those in progress are completed, there will be one mile of railway to each fourteen square miles.

Railways of Illinois.—The railways of Illinois, have been completed, in less time, in proportion to their amount, than any other in the United States; and a great number of miles have been finished in the last year. The following is as complete a list, as we are now able to make out, viz:

	COMPLETE.	IN PROGRESS.
Galena & Chicago Union,..	121 miles.	
Chicago & Rock Island,....	181 "	
Chicago & Miss.,.....	285 "	
Galena Air Line,.....	96 "	..... 39 miles.
Chicago & Aurora.....	80 "	.....
Central Military Tract,.....	84 "	.....
Peoria & Oquawka,.....	40 "	..... 40 "
Peoria & Bureau Valley,...	47 "	.....
Ohio & Miss.,.....	75 "	..... 70 "
Alton & Terrehaute,.....	65 "	.....105 "
Illinois Central,..		
Cairo to Galena..428 / Chicago Branch,.. 164	...602 "	.....102 "
Great Western, ...	95 "	..... 40 "
Belleville & Illinoistown,..	14 "	.....
Chicago & Milwaukie,.....		..... 50 "
Chicago & Wisconsin,.....		..... 80 "
Lacon & Platte Val. Air Line		.....180 "
Northern Cross,.....		... ..120 "
Paducah & Vincennes,.....		.....140 "
Ind. & Illinois Central,.....		.....120 "
Michigan Central,.....	10 "	.....
Michigan Southern,.....	12 "	.....
Warsaw & Rockford,.....		 62
Toledo, Wabash & St. Louis		151
Atlantic & Miss.,.....		170
Cin. & Chicago,.....		 20
Chicago & Fort Wayne,....		 135
Aggregate,	1,807 miles.	1,638 miles.

It will be seen by this table, and a reference to the map, that Illinois differs from Indiana, in this ; that her railways, for the most part, terminate in a commercial city, and have for their object, the concentration of Illinois interests. This was the more readily done, as there are but two points in Illinois, where there was a probability of erecting large commercial towns. These were the southern end of Lake Michigan, and the mouth of Ohio river. Opposite the mouth of the Missouri would be such a site, had not the vantage ground been seized by St. Louis in Missouri. To this point, however (Alton), will tend several of the largest railways in the state. Cairo, (the mouth of the Ohio), was the end of the *tongue*, between the Ohio and Mississippi, and will, therefore, be fully served by one great trunk, which will connect with the other railways of the state. This is accomplished by the Illinois Central. On the other hand, Chicago is situated at the other end of the state, and at the *base* of the trough, which is nearly its shape. It, therefore, needs railways on all sides ; and being a large and prosperous commercial town, has procured their construction, so that nearly all the railways of the state connect with that place, directly or indirectly. Of the 26 railroads above enumerated, *twelve* connect with Chicago ; so that there is there quite a concentration of railways. Geographically, the following is the distribution of the principal lines :

NORTH AND SOUTH.

1.	Illinois Central	704 miles.
2.	Chicago and Miss.,	285 "
3.	Chicago and Milwaukie,	50 "
4.	Warsaw and Rockford,	62 "

The Chicago and Milwaukie is a continuation north of the Illinois Central ; making 420 miles from Cairo to Milwaukie. The Warsaw and Rockford road, is nearly on the banks of the Mississippi.

EAST AND WEST.

Galena & Chicago, two lines	217 miles.
Great Western, and Indiana and Illinois Central	255 "
Chicago & Rock Island,	181 "
Chicago and Miss.,	285 "
Ohio and Miss.,	145 "
Alton & Terrehaute,	170 "
Atlantic & Miss.,	170 "
Lacon & platte Valley Air Line;	180 "

From near Salem, the intersection of the Ohio and Mississippi with the Illinois Central—the latter road makes *two* lines, one to Galena, and the other to Chicago. Above that, there are *five* east and west lines ; so that north of Salem, and between the Indiana state line and the Mississippi river, the state is divided into *fifteen* compartments ; disregarding the diagonal lines, which make many small parts. Below Salem, the trunk line of the Indiana Central, divides the *tongue* into two parts—one on the Mississippi side, and the other on that of the Ohio. Of one hundred counties in the state, *sixty-two* have railways in them. Looking on a railway map of the state, one would suppose, that it was more supplied with roads than Indiana ; but, such is not the fact. Illinois is a very large state ; its surface being over 60,000 square miles. If all the railways above enumerated, are fully completed, there will be but 1 mile of railway to 18 square miles—a proportion much less than those of Ohio and Indiana. In the southern half of the state, the proportion will be much less—being only 1 to 32 square miles—and in the southern third, it will be only 1 in 40.

The state of Illinois, lying on the Mississippi, between Lake Michigan and the Ohio, and with a level and easily worked surface, is remarkably well adapted to railroads. This has tempted her people to the construction of many lines. But, it must be recollected, that *density of population*, is, at last, the great basis of railways ; for if they are ever so easily run, or cheaply constructed, it is population only, which can furnish either the persons or the products necessary to make them profitable. In regard to *through* traffic, there is likely to be a fatal competition ; there being *six* independent lines, newly finished, across the state, east and west. Heretofore, the entire travel has been confined to one or two. It is plain, that these lines can expect hereafter but a moderate profit.

OHIO CANNEL COAL.

A large deposit of cannel coal has been discovered in our state, about thirty miles below Newark, which is said to be of a superior quality for various purposes, and particularly for the manufacture of gas in large gas works. With reference to this, the Commercial Republican, of Toledo, says : " we learn that the newly discovered Ohio coal has recently been tested in Boston and New York, and pronounced equal in all respects, and in some superior, to the best Scotland Bog's Head coal, which sells readily in Boston at $30 per ton. In illuminating power, it exceeds, by nearly two and a half times the common English cannel, and has the advantage of all such coal, in the fact that it makes an excellent quality of coke.

From Mr. J. B. Robinson, superintendent of the Sandusky, Mansfield and Newark railroad, who has an interest in the mines, we learn that fifteen tons have already been shipped to Boston, where it has been contracted at $20 per ton. It has, at present, to be transported a few miles to the canal in wagons, and then by canal to Newark, which makes the expense of getting it forward very heavy ; but when the Scioto and Hocking Valley railroad, which runs through the mines, is completed, it can be mined and freighted to Boston at $12 per ton, yielding the nett profit of $8 per ton at least."

This is a subject worthy the attention of the managers of coal gas works. If the experience of eastern cities can be relied upon, we should think this a most valuable discovery. It will, undoubtedly, be a source of great profit to its owners.

Railroads.

DEPRECIATION IN RAILROAD STOCK.

The extremely low prices at which railroad stocks generally have been selling for several months past, has seriously alarmed many timid holders, and induced a belief on the part of a portion of the community, that railroad stock is really a bad investment. How far this was true or false was shown in No. 90 of the Record. From the reports of various roads it was there shown, that the nett increase of profits was greater than the increase of capital and expenditures. Now, whatever pays well, cannot long be below par. It may for a time, suffer from panic or loss of confidence, but if it yields a good profit, it is sure to regain its hold in public faith. That this is really the case, the experience of banking some fifteen or sixteen years ago will amply testify. A correspondent of the Boston *Transcript*, has taken the pains to arrange a few facts in reference to this subject, which we copy. He says :

About fifteen years ago, there was a like panic in bank stock throughout the country, affecting both sound and unsound institutions. Bank stock had previously been up as at present to par and an advance. The stock of the Atlas Bank fell from 105 to 72 ; Granite, to 76 ; Traders', 76 ; North, 79 ; South, to 60, and was then wound up, and paid the stockholders 07½. The Atlantic sold for 81, Shawmut 80, Tremont, City, and others of the same class at similar figures ; Merchants', Globe, Union, State, below par. The Market Bank from 105 fell to 55, then had its capital reduced to 70 per share, its present par value.

The Suffolk was the only bank that kept up to par. Bank divideuds were then mere skeletons. Stockholders, on consulting the semi-annual report, found to their dismay, *none* scattered up and down the page. A semi-annual list of that period commenced as follows :

American, none ; Atlantic, none ; Atlas, none. The Atlas paid no dividend for two or three years ; some institutions eked out 1½, some 2, some 2½ per cent semi-annually. The Suffolk alone kept up to 4, the Merchants', and one or two others to 3 per cent. Bank stock was then looked upon as railroad property now is. There were more sellers than buyers at low figures. Railroads from that date took a start. The Worcester from 77 went up gradually to 122 ; Western from 40 to 112 ; Lowel from 86 to 130 ; Maine from 75 to 118 ; Fitchburg from 90 to 128, and so on. That bank panic was like the present one in railroad property. Some few were mismanaged, some failed, and distrust settled upon them all, depreciating their

market value from 10 to 50 per cent. So at present with railroad stock and bonds; some rascality has been perpetrated, some roads have been mismanaged, and nearly the whole, stock and bonds, settle down from 5 to 50 per cent below par. That new roads, that have got submerged in debt should lose nearly all market value, as regards the common stock, is not surprising; but that old, established roads, and first mortage 7 per cent bonds for about one-third the actual cost of building, on finished roads running through a populous and fertile country, should be forced down to 50 per cent discount, is indeed a marvel.

But there is another feature in the present position of things which tends to show that railroads are not the only investments which have suffered from the panic. Bank stocks as well as state stocks have likewise depreciated, and their holders can extend the hand of sympathy to those of the much abused railroad script. But we refer to real-estate. At the period in which railroads possessed the entire confidence of the community, real-estate securities were in a measure neglected, however their value was fixed by the test of income and in some places had run enormously high. No where more so than in New York, where the opportunities for successful business investments induced a correspondingly high price in real-estate. We see it however repeatedly stated in New York Journals, that houses which commanded a rent of $4,000 a year ago, now can scarcely find a tenant at $2,000. Here then is ample evidence that railroads are not the only *bad* investments. That everything that depends on the caprice of public confidence or convenience, not excepting even gold itself, is liable in times of panic to sudden and unreasonable revulsions in value.

Whatever interest absorbs a vast amount of capital, must inevitably in its fluctuations, from whatever cause they may arise, affect the whole routine of financial concerns. If capitalists become alarmed in reference to banking institutions, the panic extends to every other interest; if again railroads are made the subjects of distrust, the consequent embarrassments and difficulties they are compelled to undergo, is not limited to themselves, but involves in general difficulty the mercantile, banking and manufacturing interests.

Baltimore and Ohio Railroad Freight Tariff.—We are indebted to a friend on the Baltimore and Ohio Railroad for their table of Freight Tariff for December, 1854. The various classes of freight are charged 90, 75, 65, and 55 cents per 100 lbs. severally, from Baltimore to Wheeling.

Alabama and Florida Railroad.—This company are prepared to let out the contract for the graduation, masonry, and bridging of 67 miles of their road from Montgomery.

PITTSBURG AND CONNELLSVILLE R. R.

The annual meeting of the stock-holders of this company took place at Pittsburg, on Dec. 4. The reports of the President, Gen. Larimer, of the Treasurer, Wm. B. Curry, and of the Chief Engineer, Oliver F. Barnes, were presented and accepted. The meeting then proceeded to elect the following gentlemen as directors for the ensuing year, Wm. Larimer, Jr., Thos. Scott, Thos. Bakewell, Walter Bryant, James T. Kincaid, John Anderson, of Pittsburg; Henry S. Garret, Columbus O. Donnell, Thomas C. Jenkins, of Baltimore; C. P. Markle, of Westmoreland Co.; Daniel R. Davidson, of Fayette Co.; and Peter Meyers, of Somerset Co.

Since the last annual report of the Directors, the road has been located and put under contract. On the 22nd of February last, the report of the Chief Engineer, on the location of the road and the estimated cost of the various routes, was submitted to the board, and after consideration, the route was located on the north bank of the Youghiogheny river, from West Newton to Connellsville. On the 23rd of March, the road was let in sections of one mile each, and also the Sand Patch Tunnel, in Somerset Co.; this last was subsequently re-let to another firm. Contracts were made in July and August for the iron, payable in Alleghany County bonds. Much of the iron has been delivered at West Newton, and the remainder is expected. The cross ties are furnished and distributed along the line, and contracts have been made for the chairs and spikes. Arrangements have also been made for locomotives and cars, and one of the locomotives already received.

On the division between West Newton and Connellsville, the grading, masonry, and ballasting of about twenty sections, are completed, and the remainder will be vigorously prosecuted, as also the track-laying, which has been already commenced. It is expected that the road between West Newton and Connellsville, will be open early in the spring.

The right of way has been obtained through more than 100 miles of route, at a cost not exceeding $10,000, much of which is payable in stock. The company has also purchased three tracts of land in Somerset County, lying around the western approaches of the Sand Patch Tunnel, and thereby secured the control of the section in which their heaviest operations must be conducted. They have also purchased thirteen acres of coal land, adjacent to the borough of Connellsville, payable in stock, they have already opened a twelve foot vein on this land.

It is suggested that an arrangement will be attempted to be made with the Pennsylvania R. R. Co., for the use of their track for the first twelve miles from Pittsburg, this will be a great saving of expense to the Connellsville company, and the two tracks of the Pennsylvania company, when completed, will be sufficient for the business of both roads.

The following summary of the financial ability of the company, we copy directly from the reports:

At the date of the last annual report the subscriptions from corporations and individuals to the capital stock of the company, amounted to $1,820,100. The amount embraced in additional individual subscriptions since—the amount disposed of in consideration of land damages—purchase of real estate, depot grounds, material for the road, engines, cars, &c. will be sufficient to swell this sum to	$2,000,000
The city of Allegheny, by her Councils, has resolved to subscribe, on terms which will be complied with	250,000
The counties of Somerset and Fayette have been asked for $200,000 each, but will subscribe $100,000	200,000
Additional individual subscriptions along the lines of the road, and at the cities of Pittsburg and Cumberland, can be procured for	50,000
Amount proposed to be taken by contractors on the graduation and masonry, being one-sixth of estimates	500,000
	$3,000,000
This amount expended on the road, we propose to execute a mortgage for $2,100,000, under full authority of law for that purpose, as follows, viz: $1,000,000 six per cent. bonds, with the guarantee of the city of Baltimore; and $1,000,000 seven per cent. bonds, for which the work actually completed, and constantly in progress, will afford a substantially increasing basis of security to the purchaser	2,000,000
	$5,000,000

This sum will meet the gross estimate, $5,000,000, of the Chief Engineer, of the amount necessary to complete and equip the whole road for one year. The amount required for additional equipment and for interest and discount accounts, can be provided for and met by the issue of income bonds.

INDIANAPOLIS & CINCINNATI RAILROAD.

It will be gratifying to the friends of this road to learn that it is rapidly gaining in favor with the community, and that its careful and attentive management is reaping its reward. The following statements of earnings for the past five months, will amply show its hold on public confidence:

November.	
Passengers	$20,733 13
Freight	16,668 38
Mails	562 50
	$37,964 01
October.	
Passengers	$18,557 88
Freight	14,824 35
Express	562 50
	$33,944 73
September.	
Passengers	$16,089 44
Freight	15,021 90
Express	560 50
	$31,671 84
August.	
Passengers	$13,227 39
Freight	12,514 94
Express	562 50
	$26,304 83
July.	
Passengers	$8,036 79
Freight	7,803 83
Express	562 50
	$16,403 12

The gross income of August was 60 per cent. greater than that of July, September 20 per cent. greater than August, October 7 per cent. greater than September, and November 12 per cent greater than October. The earnings of November are 131 per cent. greater than for July. The increase of freight

during the same period, will be seen to be 113 per cent., and that of passengers 158 per cent. A large portion of this increase in the passenger receipts, is undoubtedly due to the fact that the road has been thoroughly ballasted during the summer, and its through connection with the Ohio and Mississippi road, have opened to it a new channel of business. There can be no doubt, but that when the Ohio and Mississippi road has extended its track nearer the business portion of the city, and when a third rail shall be laid to extend the guage of the Indianapolis road to the city depots, the freight business of this road will be materially increased; it has along the line of its route material enough waiting for favorable facilities to bring it into competition with the same articles in other sections.

PENNSYLVANIA RAILROAD DOUBLE TRACK.

We learn from the Pittsburg *Gazette*, that the double track of the Mountain Division of this road is finished. The line between Altona and Johnstown, a distance of thirty-nine miles, is ready for business, being provided with all the necessary sidings and water stations. This is highly gratifying intelligence, indeed we cannot put too high an estimate on the value of a double track on any railroad, and particularly, on those which have heavy grades. There are circumstances, when the utmost caution, will fail to provide as efficient a safeguard from accident, as the simple remedy of a double track.

We hope to be able before many years to announce the completion of a double track on every great railroad route in the country.

BEAVER EXTENSION OF THE CLEVELAND & PITTSBURG RAILROAD.

We have just received the gratifying intelligence, says the Beaver *Argus*, from Mr. WILLARD, one of the Engineers, that at a meeting of the Stockholders held at Hartford, Conn., the sum of $150,000 was realized from the sale of Bonds—which amount is to be applied toward the completion of that portion of the road located between Beaver and Wellsville. The funds, however, will not be appropriated to this object until about the 1st of January. The entire length of the line, including the heavy stone work, is in such a state of forwardness, that the rails could easily have been laid before the close of the present year, had it not been for monetary difficulties entirely beyond the control of the officers. Now, if there is no drawback—and there is no reasonable likelihood that there will be—we may expect to hear the neigh of the iron horse along Beaver Plains, before the ensuing spring is half advanced. All honor and gratitude to the citizens of Connecticut —the "land of steady habits,"—of "onions." —and of "wooden nutmegs,"—for the timely aid in furtherance of an enterprise greatly advantageous to Western Pennsylvania, and which we trust, will also fill their pockets with goodly dividends.—*Wellsville Patriot.*

Banking, &c.

THE TIMES.—LAW AND EXECUTION.

What are termed "hard times" result from a too general indebtedness. The nation owes too much abroad. The merchants owe too much. The banks owe too much, and thousands of individuals owe too much. To this there must come a time of settlement; for even India rubber will not stretch beyond a certain point,—however elastic it may be, it must have an end somewhere. In financial revulsions, the simple state of the case is, that credit has been stretched to its utmost tension. The consequence is, that some of the strands of the thread begin to give way, the weakest first. Banks, whether private or public, break when they owe too much; the public confidence being shaken, credit is rapidly diminished. The recent failure of Private Banks in Cincinnati, has destroyed one very general delusion; and so far, done good. It has destroyed the delusive idea, that it is the issue of Bank Notes, which is the source of danger in Banks. That is all a mistake. A *debt* is a debt, whether it is evidenced by a Bank Note, a Certificate of Deposite, a Bill of Exchange, or a Judgment at Law. A debt is a debt, carrying with it the legal and moral obligation to pay the sum mentioned. This being the case, a Corporate Bank, State Bank, Private Bank, Merchant or individual, all stand under precisely the same *liabilities*, in whatever form that debt exists. In a time, like the present, it is not the want of *money*, but the abundance of *debt*, which makes the difficulty; and the solution of the difficulty consists simply in the settlement of these debts, either by payment, or bankruptcy. Either course requires *time*, and the creditors, (possibly themselves debtors also,) are impatient, and unwilling to wait, because they themselves are pressed. The consequence is, that A presses B, B presses C, C presses D, and D in turn presses A; if A determines to force B by law to pay, attach his property by judgment, and harrass him by executions, the result is, that B does the same, and the whole series of individuals are pursuing one another, with Sheriff's writs; and thus property is reduced in value, individual estates sacrificed, and the whole business of society thrown into inextricable confusion. The history of some of the Judgments in our Courts of Law would be found to run through twenty years, involving remote parties, who had no interest in them; sacrificing property, at rates, alike ruinous to creditor and debtor; and doing nothing but evil continually. Now what we would say is this,—*avoid the law while you possibly can.* Left to their calm judgment, nine business men out of ten will say the same thing. No man in the world *can settle up a commercial concern, or an estate, or a Bank, as well as the proprietor, if he be an honest man.* Ah! say you,—suppose he is not honest? Well, if he is not an honest man, your chance at law is worse yet. The law is the very place for a rogue to involve you in swamps and morasses from which you will never get out. Suppose a rogue, instead of being fool enough to run away, stands his ground; what is to prevent his putting his property out of the way?—Nothing.—Under our laws, a creditor can *attach* property only when *you* can *swear* a fraud, or something to that effect against the debtor. But how can you swear a fraud against a common debtor? You cannot, on any ordinary evidence, without perjury. The rogue knows his own plans, and pursues them without giving notice, till he has converted personal property into money, and put his real estate in the hands of a friendly creditor. The result is you pursue such property forever, and have the costs and fees of years to pay, without a cent in return. But, in nearly all cases, the debtor is morally upright. He has only been foolish or imprudent; and the creditor pursues him, as he says, to get *security*, or to *force payment*. Now, what does he get? If he commences a legal hunt, he must share with all others, and bring in all creditors, and by tearing the debtor to pieces, they destroy the very property, credit, and energy, which carefully minded, would have paid all their debts. By selling property under execution, they destroy its value; and finally turn the debtor on the world, with the conviction that they have cancelled his obligations, by the cruelty of their treatment, and that henceforth they may get their debts as they can.

Taken in any aspect, except in some very peculiar cases, the collection of debts by law, is alike injurious to creditor, debtor, and society. All the lessons of wisdom and experience, concur in proving, that while it is not prudent to give or take credit, beyond the means of immediate payment, it is equally a wrong and a folly to pursue a debtor as if he were a felon, and deal with a man to whom you have yourself given credit, as if he were a villain. It is now quite settled, that it is as fatal to the creditor as the debtor; and if, as in some cases, God has permitted men to flourish on the ruin of others, it is only to reserve them, in their own persons or in their descendants, to a moral retribution, certain, signal, and exemplary.

SUNBURY AND ERIE RAILROAD.

We are happy to announce the fact that the link of the Sunbury and Erie Railroad between Milton and Williamsport Pa., (28 miles) will be opened for travel on the 15th inst. This completes the chain from Philadelphia to the City of Erie, Dunkirk, Buffalo and Niagara Falls, over roads previously mentioned. It will at once place this city in a position to compete with New York for the trade of the Lakes, a portion of western New York, and the rich and beautiful valley of the west branch of the Susquehanna, being ten miles nearer than New York to all the points named and the country west of Elmira. The opening of the road will be an era in the history of the business of this city, in which all should feel the liveliest interest. An excursion to Williamsport, in which the City Councils will participate, will leave on the 15th. The excursionists will visit Erie and return by the way of Cleveland and Pittsburg, over the Pennsylvania Railroad.

The road is one of the most substantially built in the Union, the bed being of the most solid character, and the rails of a very superior quality. The Montour Company at Danville, Pa., manufactured the rails, which are 87 pounds to the yard. Two handsome bridges span the Susquehanna, which are represented to be unexcelled, in any particular, by any railroad bridges in the country. The road is graded the whole length for a double track, and cost about $40,000 per mile—say nearly one and a quarter millions of dollars. —*Phil. Price Current.*

Selected Railroad News.

ELECTION OF RAILROAD DIRECTORS.

On Tuesday last, the stockholders of the Cincinnati, Lebanon and Xenia railroad, met at the Town Hall to elect seven Directors to serve for the ensuing year.

The new board, then, will consist of the following gentlemen: Thomas Corwin, J. F. Gould, Durbin Ward and J. P. Gilchrist, of Lebanon; William B. McClelland, of Waynesville, and George Carlysle and O. M. Mitchell, of Cincinnati.

From the report of the President, we derived the following facts in relation to the fiscal condition of the company.

RESOURCES.

Individual subscriptions, including those of Edgar Conkling and A. De Graff & Co., the former partly in real estate. - - $527,300

EXPENDITURES.

For engineering, work on the road, right of way, salaries, purchase of depot grounds, and all other expenses, - - - - - - - - - $83,085

Leaving a balance, in the hands of the company, in cash and stock subscriptions of $438-697. Of this amount, A. De Graff & Co., subscribed $200,000, and E. Conkling, in cash and real estate, $122,000—in all, $322,000, none of which has yet been paid. But, besides, there were over $200,000 in unquestioned subscriptions of which $97,402 have been collected and $83,085 expended.

On the road, over $60,000 of work has been done, chiefly between Lebanon and Mason.

The cost of engineering up to the present day, has been about $9000—a sum considerably below the popular estimate. This includes the survey of two routes to Xenia, one by Bellbrook and one by Waynesville; and two to the tunnel and one to the Great Miami road. In addition, the line from Sharon to Xenia, has been located, staked, superintended and partly graded. We do not know precisely the amount paid for salaries and incidental expenses, but it is not near so great as generally rumored.

On the whole, the fiscal affairs of the company have been pretty well managed—quite as well as any new road projected at the same time, and infinitely better than many old ones, many of which are now insolvent. The company is entirely out of debt—has about $20,000 cash on hand—and reliable cash subscriptions besides, of over a hundred thousand dollars.

We believe the officers have acted with integrity and good faith, and, under all the circumstances, with perhaps as much wisdom as any other body of men would have acted.

The new board are men of wealth generally and of undoubted honesty. We hope they will soon favor the stockholders with such information as to the future prosecution of the road as will induce them to pay, with alacrity, the remaining instalments of stock. A permanent union with the Great Miami, Mississippi or Little Miami roads, or with all of them, on mutually advantageous terms, would restore confidence. The Directors, we are satisfied, are ready to conclude any fair arrangement which will insure us a road at an early day. Our citizens would generally prefer the construction of the Short Line if it can be done; but if this object cannot be accomplished, they are in favor of a junction with the Little Miami road. Whether an arrangement could be effected with the latter, in any contingency, is, probably, doubtful.—*Star.*

NIAGARA FALLS AND LEWISTON R. R.—The Niagara Falls Gazette has an article in reference to this new road, opened week before last, from which we extract the following:

The whole is a continuous descending grade. It enters the gorge of the river, near the "Devil's Hole," and passes along the side of the river bank to the mountain above Lewiston, where it descends to the eastern end of the village. At some points, the rock overhangs the road as though ready to fall. At such places and at the curves, men are placed to see that it is all right before a train passes. Not far above the Lewiston Suspension Bridge, is a tunnel through the solid rock of some 90 feet. As the train passes along the river bank a most beautiful view is presented of the Niagara and the distant Lake. This is enough to pay the traveler and nature's admirer for the time and expense of the trip.

Buffalo trains run over the road, and as yet, trips are made with great care. The traveler will be glad to learn that he can now find a more modern way of traveling from here to Lewiston, than by the clumsy stage."

THE BLUE RIDGE RAILROAD AND ITS KENTUCKY CONNECTIONS.

The following is a copy of a letter addressed to Gen. Leslie Combs, President of the Lexington and Danville railroad. It contains information of value to the people of Louisville:

CONSTRUCTION OFFICE,
BLUE RIDGE RAILROAD,
Pendleton, S. C., Nov. 7, 1854.

SIR: This road will undoubtedly terminate at the mouth of the Holsten, and it is time to commence obtaining information in regard to the best route north.

The route from Paris via. Richmond, London, Williamsburg, Wheeler's Gap, Clinton, on Clinch River, mouth of Hickory Creek, to the head of Town Creek, thence to the mouth of the Holsten, and the line of the E. T. & Georgia Railroad, has been carefully examined this season, and the route has but few difficult points, and those easily overcome.

The *other route* which has not been examined *commences at the mouth of the Holsten*, thence to Clinch river, at the mouth of Emory river, thence up Emory river to the main fork of Emory river, via. Montgomery, in Morgan county, thence to the head of the south fork of the Cumberland, *thence via or near Somerset to Danville Kentucky.*

This line ought to be examined immediately, and if your company will examine that part between Danville and Montgomery, I will examine that part between Montgomery and the mouth of the Holsten.

This line is chartered to the Kentucky line, and has State aid, $10,000 per mile for iron and equipments, and $100,000 for the bridge across Clinch, and we can get in Tennessee $200,000 in county and private subscriptions. And as thirty miles of the line would be in common with the line from the mouth of the Holsten to Nashville, the Virginia and South Carolina lines could be depended on for about $300,000 more. I presume, if the route is favorable, a large county and private subscription could be obtained in Kentucky.

This line could, if the route north of the main Emory is favorable, be continued down the valley of the Sequatchy to the Tennessee river, and connect with the Memphis and Charleston and Nashville and Chattanooga Railroad, at the mouth of the Sequatchy, thereby making a due north and south line from Danville.

The valley of the Sequatchy is remarkably straight, and well adapted to the construction of a railway, the cost of grading which, would not exceed $5,000 per mile.

Your early attention is requested; and write to me at Raleigh, N. C., to the care of the Hon. N. H. Thomas.

Very respectfully, your obedient servant,
ANSON BANGS.

Gen. Leslie Combs, President Lexington and Danville Railroad Company, Lexington, Kentucky.

THE NEW YORK AND ERIE RAILROAD.

We find in the New York *Daily Times* of Wednesday, the following complimentary notice of Mr. D. C. McCallum, formerly of this city, but now filling the responsible post of Superintendent of the above work. Those who know Mr. McC. will not doubt that the praise bestowed upon him is merited.

"A strong movement in favor of Temperance has been made on the Erie Railroad. The Superintendent, Mr. McCallum, has determined, so far as he is able, to prevent the sale of liquor at the Depots on the line of the Road. Turner's Station, in Orange County, has heretofore been the regular stopping place for meals, etc., and liquor has been sold at the bar in great quantities. The *employees* of the company having been somewhat too prone to refresh themselves, the running of the trains was altered, so that few or none of them stopped for meals until the evil was abated. In consequence of this action, the bar at Turner's had been removed, the counter taken up and transported to parts unknown, and only coffee and spring water remain to be procured within the Depot buildings. At the private bar of the house, notice is given to the effect that no liquor will hereafter be sold to persons known to be employed on the Road. Similar action, it is understood, will be taken at other points.

"Since the accession of the present Superintendent, the running of the Erie cars has been remarkably regular and free from accident; more so, we think, than previous seasons. Scarcely a single serious catastrophe has occured during the Summer and Fall; a fact which shows that careful superintendence obviates the tendency to disasters, even on a road so celebrated for mishaps as the Erie has been, in times past. 'Safety first, speed afterward,' is the motto now; and it is a good one for all Railroad Companies to heed."—*Roch. Amer.*

RAILROAD CONSOLIDATION.

A contract was made by the proper officers on the 21st ult., whereby the Eaton & Hamilton and the Richmond & Miami Railroad Companies, their Capital stock, roads, debts, dues, rights in action, franchises, interests, and property of every kind, character and description, were merged, united and consolidated into one joint-stock company, one road, one interest, and one property,—the new organization, to which all the aforesaid rights, &c., accrue to be known and designated as the Eaton & Hamilton Railroad Company. The agreement took effect on the first day of the present month, and is now in force. This arrangement is considered of much importance to those interested in the property and business of the Road.—*Eaton Register Dec. 7th.*

Miscellaneous.

THE SUSPENSION BRIDGE ACROSS THE MISSISSIPPI.

There now exists no longer any doubt, that the first bridge across the mighty Mississippi, at any point, will be at Minneapolis, in the Territory of Minnesota, where, but six years ago, scarcely a house marked the progress of civilization. This will be a suspension Bridge, constructed by private enterprise, at a cost of $60,000. Strange as this may appear to those who ten years since could not trace out Minnesota on the Map, it is nevertheless a reality, and when the fact has become generally known, it will do much toward attracting strangers to one of the most delightful as well as one of the most romantic spots in the Union.

"What! a Suspension Bridge across the Mississippi river at Minnesota?" "Certainly, why not?" "Oh! but I thought you were so poor there that you were obliged to live in log huts?" "Live in log huts! Why, my dear sir, we have splendid mansions in Minnesota. We have a large city in Minnesota. We have magnificent hotels in Minnesota. We have extensive saw-mills in Minnesota. We have fine churches in Minnesota.

We have mineral, agricultural and manufacturing resources in Minnesota. We have beautiful lakes, rivers, prairie land, and game of all sorts in Minnesota. We have beautiful carriages and fast horses, and what is further, we have fast people in Minnesota. We have Minneha-ha and St. Anthony Falls in Minnesota. And above all, we have the first bridge (and a Suspension Bridge at that) in Minnesota. In fact, sir, we have every thing which conduces to the comfort of man in Minnesota."

Now, then, tell your friends these facts. They won't believe you. They will laugh at you. And when we tell them we have a suspension bridge erected at a cost of $60,000, they won't believe that: still it is so. But new countries are like progressive individuals:— they are invariably ahead of the age:— They are obliged to suffer and even to endure the sneers of the ignorant, but time sets all things right: so will it be with Minnesota. When thousands and thousands who now scout the idea of a great city where stands St. Paul, shall have passed over the first suspension bridge that spans the Mississippi, they will begin to realize that the "tale has not half been told.

The bridge to which we allude, is in a rapid course of completion. Eight ropes, so to speak, embracing one thousand strands of wire, have been strung across from the piers on the Minneapolis side to those on Hennepin Island. These are to be bound together, which will form one of the main supports on which the bridge is to be hung. The other will soon be completed, when in a short time the bridge will be in a condition to cross. The architectural design is of a modern character, and is in keeping with the progressive spirit about the region in which the bridge is built. In truth the bridge equals (although not on so gigantic a scale) the far famed suspension bridge at Niagara Falls.

As Minneapolis is a place of only a year's growth, some of our distant readers may not know its precise location, and that of the bridge above described. Minneapolis is directly opposite St. Anthony, on the west bank of the Mississippi, on what is still government land, and two years since was in possession of the Indians. The bridge connects the two places, which, the Times might have added, will contain five years hence, twenty thousand citizens.—*L. Times.*

PAPER MAKING.

Few persons have an adequate idea of the immense amount of capital and labor employed in the manufacture of paper; and it is only by a recourse to figures and reliable statistics, that a just conception of the nature and extent of the business can be approximated. The rate at which the consumption of the article increases, has far outstripped the most extravagant anticipations that could have been entertained, and has opened the eyes of manufacturers to the startling fact, that the source from which they have derived the material necessary for the manufacture of paper, and which they had regarded as unfailing has been comparatively exhausted—to such an extent, at least, as to render them no longer able to keep pace with the demand. Rags which at one time proved a serious incumbrance to house-keepers, were thrown out with the daily offal, are now becoming not only sought after, but an article esteemed almost precious.

This state of things had been foreseen; and the proprietors of the London Times knowing the effect, an advance in the price of paper growing out of a scarcity of rags, would have in diminishing their profits, offered a reward of $25,000 for the discovery of a cheap and perfect substitute for rags as a material for the manufacture of paper. Many experiments have already been tried, and though as yet, without entire success, we may still reasonably hope, in view of what has already been accomplished, that ultimately the desired result will be attained. What man has done in the past, inspires the belief, that his genius is capable of further and greater achievements, that indeed whatever his physical and intellectual wants may crave as essential to the grand progressive movement in favor of the true interests of his race, will in time be procured, and brought within the achievement of science and art. We trust that the check experienced in meeting the demand for paper, will soon be removed, as great inconvenience has already been suffered, particularly by the press. Many proprietors of newspapers have been compelled to reduce the size of their sheets, and in some instances to suspend the publication of their paper altogether. We know of no more perilous undertaking in a pecuniary point of view, than to attempt at this time, the establishment of a newspaper.

We have at present in the United States, 750 paper mills, which it has been estimated, manufacture 270,000,000 pounds of paper a year, valued at $27,000,000. Allowing that one and a half pounds of rags are required to make one pound of paper, we have 405,000,000 pounds of rags consumed in one year, which at the rate of four cents a pound are worth $16,200,000, and if we add to this the cost of manufacturing, which, with interest and fixed capital, insurance expenses, &c., has been found to be $4,000,000, and the cost of labor, making an aggregate of $23,635,000, as the actual expenditure in manufacturing paper worth $27,000,000, we find the "measure of profit by no means unreasonable; and which might even be considered small, were not the manufacturer comparatively free from those sudden changes that affect the manufacture of cloth and metals." If a substitute for rags be discovered, which will keep the supply of paper up to the demand, we can readily perceive that a tremendous impetus will be given to the manufacture.

Translated for the Journal of the Franklin Institute.

APPARATUS FOR PRESERVING TELEGRAPHIC APPARATUS FROM THE DISTURBING INFLUENCE OF ATMOSPHERIC ELECTRITY.—"M. Becquerel presented to the Academy, an apparatus invented by M. Barthelemy Bianchi, intended to preserve telegraphic apparatus from the disturbing influence of atmospheric electricity."

This very simple and easily erected apparatus, consists of a metallic sphere, traversed by the circuit wire, and kept in the centre of another glass sphere, formed of two hemispheres united by a broad copper ring, armed at its inside with equi-distant points directed towards the centre of the metallic sphere, and approching within a short distance of its surface. The two hemispheres end in sockets, into which the connecting wire passes and is cemented. The lower part of the copper ring is provided with a metallic stop-cock, which permits a vacuum to be made in the apparatus, and kept in it, if it be thought necessary. This stop-cock has a screw-thread which is to receive a metallic rod designed to put the metallic armature into direct connexion with the earth, while the circuit wire, and the sphere which forms part of it, are completely insulated.

With this apparatus it is seen, that all the atmospheric electricity which comes upon the conducting wire of the telegraph, is transmitted to the ground through the points with which the ring is armed.

Such an apparatus is to be erected at each station; experiment has proved to the author, that when the discharge of a battery of eight jars is passed into a telegraphic conductor provided with this apparatus, the dynamic current is not affected, and all the stati cal electricity passes into the earth, under the influence of the points.

M. Becquerel in presenting the apparatus, expressed the desire that it should be immediately experimented on, on a large scale, on our telegraphic lines.—*Comptes Rendus de l' Academie des Sciences, (Paris,)* 15th May, 1854. p. 877.

MACHINERY.—President Hitchcock says that there are in Great Britain, at the present day, fifteen thousand steam engines driven by means of coal, with a power equal to that of two million of men; and thus is put into operation machinery equalling the unaided power of 300,000,000, or 400,000,000 of men. The influence thence emanating reaches the remotest portions of the globe, and tends mightily to the civilization and happiness of the race.

RAILWAY RESOLVES AGAIN.—We learn that among other ways and means suggested for advancing the credit of railways, the Board of Directors of the Ohio & Indiana Railroad Company have established a sinking fund of the net earnings of the Road, "to be exclusively and irrevocable applied to the redemption of the mortgage debt of the Company." The Board of Directors of the Fort Wayne & Chicago Railroad Company have adopted a like policy.—*Com. Reg., Sandusky.*

☞ The Melbourne and Hudson's Bay Railroad, the first in Australia, was opened on the 12th of September last.

AT THE STOCK BOARD,

MERCHANTS' EXCHANGE

And at Private Sale.

Sales made but not reported.

Monetary and Commercial.

During tho past week, there has been but little change in the position of affairs in monied circles. The expectations of increased business dependent on a rise in the Ohio, have not been realized; the river is still much below the point of successful navigation, and, consoquently, in general business, but little is doing. The weather recently has been favorable for packing, and, consequently, the hog market has exhibited considerable activity. The arrivals have been large and larger quantities are understood to be on the way. The receipts of the week up to Tuesday evening, are thus summed up in the *Price Current:*

From Kentucky	4 610
By river and Railroads	44 670
Through tollgates	9 400
Slaughtered at Madisonville and Plainville	10 500
	69 180
Previously reported	105 588
Total	174 768
To same date last season	131 191

Prices range from $4,50 to $4,75 for large sizes, and somewhat irregular. The banks still adhere to their stringent course in regard to discounts. Accommodations at the banks on new paper are among things that are talked of, as having happened some time ago; but at the present, the banks find all their available means fully occupied in extending the paper they already hold. The payment of taxes to be made before the 20th, rather adds to the stringency, and there is active inquiry for money. We quote nothing doing in regular transactions, and outside rates ranging from 1 to 4 per cent.

The firm of T. S. Goodman & Co., commenced business under their new style of Goodman & Sons on Monday, and paid depositors of the old firm 10 per cent. on their old deposits, being the first monthly installment on their liabilities. It is hoped that the other suspended banks will be soon able to take some such course.

The stock market has been entirely without energy for the past week, and were it not for the necessities of holders, but little stock would be offered in market. Eastern exchange contioues abundant, we quote it at ¾ to 1 per cent. selling, and ½ per cent. buying.

Our reports from the East are of an encouraging nature, though as yet there is little perceptible relief for the general borrower. The Banks of New York city are beginning to extend accomodations somewhat to their customers, and it seems to be a general impression that the bottom has been reached. There are several favorable indications which have been before noticed, such as decreased imports, few European orders for the Spring, decreased shipments of gold, with increased exports. These, together with the fact that the cotton crop is now known to be unusually large, will gradually but surely bring back business to a healthy tone.

We hear of but few failures of the merchants, either at the East or West, a circumstance which in these times of pressure could hardly be expected; it speaks well for the prudence and integrity of the business community.

In painful contrast with this, is the frequent report of defaulting clerks in the Banks; it shows there is a screw loose somewhere. These institutions have been carried on too much on the "confidence" plan, we mean to say that while legislation has placed safe-guards around them, the Directors have allowed themselves, or rather others, to be swindled for want of making proper use of the precautions which legislative wisdom had placed in their power. It does seem to us that the system of reports, examination of accounts, and inspection of vaults, if properly carried out, would materially assist in keeping "honest" men from becoming rogues. If a man is conscious of integrity, a searching inspection can do him no harm, but if he is guilty of fraud, it would detect the peculation before it had proceeded too far. No honest clerk would object to a careful scrutinization of his accounts. It is to be hoped that these unfortunate circumstances will lead to more thorough and careful inspection of bank accounts.

With regard to Stocks, Thompson's Reporter says, The Stock Market continues without much animation, and prices are not materially altered from last week. The Fancies fluctuate from day to day, according as the Bear or Bull feeling predominates among the brokers. Outsiders are doing very little in speculative Stocks. Orders for good dividend paying securities are coming in to a moderate extent. State Stocks are selling largely, and at very low prices. At present prices, Virginia, Missouri and Louisiana 6's present an opportunity for safe investments seldom offered. An easy Money Market would put up prices 10 ℔ cent at once.

The following quarterly statement of the Ohio Banks to the Auditor in November, may not be uninteresting.

	Feb. 1854.	Nov. 1854.

Increase (68 per cent.)	$ 419,074 30

The road has earned in twelve months $122,398 more than my estimate for the whole year.

S. W. ROBERTS,
Chief Engineer and Superintendent.

ESTIMATED WEIGHT ON VARIOUS ARTICLES OF FREIGHT ON RAILROADS.

Many articles of freight being usually bought and sold by measurement, and not weight, it would be somewhat difficult to arrive at the proper charges on the railroad, unless the comparative weights of the various substances are well known. It is not always safe to take an isolated sample, for a slight error in a sample, would produce a large one in a lot of merchandise.

The following table of weights which has been adopted by the Baltimore and Ohio Railroad, may be found useful:

	lbs.	
Wheat	60	per bush.
Rye	56	" "
Corn	56	" "
Barley	46	" "
Buckwheat	45	" "
Oats	30	" "
Charcoal, if dry	22½	" "
do	14	" cubic foot
Fire Wood, Posts & Rails, dry	3500	" cord

Accompanying the articles designed for shipment, there should always be forwarded to the company, some reliable evidence of the number of bushels, feet, etc., in the articles.

RAILWAY SUSPENSION BRIDGE AT THE FALLS.—This noble structure is expected to be completed by the first of January, and the first train will probably pass over it on that day. The Rochester *American* gives the following dimensions of the Bridge, as furnished by the Architect, Mr. J. A. Robling:

Length or distance from the centre of the towers,	feet	822
Height of the towers above the rocks on the New York side,	"	89
Height on the Canada side,	"	37
" to the railroad track,	"	60
" of the track above the water,	"	260
Number of Wire cables,	"	4
Diameter of cables,	inches	10
Number of strands of No. 9 wire in cable,		3,659
Total Power of the cables,	tons	12,400
Weight of the entire bridge,	"	750
" of the bridge and of the heaviest load that can be put upon it,	"	1,250
Greatest weight which the cables and supports can bear,	"	7,300

RAILWAY WORK SUSPENDED.—The Maumee River *Times* says all work upon the Toledo & Illinois Railroad has been suspended, for the time being, owing to a lack of means to carry it on; and adds—"This does not look much as though we would hear the neighing of the iron horse upon it as soon as was anticipated, mention of which was made in our last issue."—*Com. Reg., Sandusky.*

THE IRON MOUNTAIN.

Who has not heard of the "Iron Mountain of Missouri!" In the county of St. Francois, and in the midst of a fertile and flourishing agricultural region, some eighty miles from St. Louis, and some twenty-eight from the Mississippi, rises this famous eminence of iron. It is thus described by a correspondent of the St. Louis *Republican*:—

"The mountain and the mound consist of masses of iron ore of the richest quality, arranged by the hand of nature in 'ready made' lumps, from the size of a pigeon's egg upward, mixed with a small portion of reddish yellow clay, which itself contains quite a per centage of iron. Thus far the workings—there is no mining necessary—have been confined to a small portion of the westerly slope of the mound, the mountain being held in reserve, I presume, for the grander operations of future generations. A few hands, with little labor or cost, pick out enough ore to supply the furnaces. The entire mound is composed of these lumps of ore, almost as pure as pig metal, so far as it has been excavated and tested, easily separated from the clay which fills the interstices. In many places, scarcely anything but lumps of pure ore, with hardly any admixture, appear. In some parts of the workings, the ore taken out requires no roasting to prepare it for the furnaces; but generally it is roasted in immense heaps, which at this time furnish a large store for future use. When this mound, or that portion of it above the level of the furnaces, is all changed from its crude state to iron, the company may proceed to excavate below the level, or continue eastward a few hundred feet, and attack the mountain itself, which, so far as is known, is but a vastly enlarged edition of the same volume. But at what period will the mound, even, be exhausted? I have seen no calculations, and heard of no estimate of the quantity of ore; but for my own satisfaction, assuming the following data as entirely within reasonable bounds, these results are obtained:

"Twenty acres, an average depth of fifty feet, yielding, say four tons of ore to the cubic yard, would produce about six and a half millions of tons of ore; and allowing seventy per cent. as the net yield of metal, four and a half millions of tons of iron. If this were taken out at the rate of one hundred thousand tons per annum, it would occupy forty-five years. Unless, therefore, a much larger quantity be yearly disposed of, the present generation of workers will not witness the disappearance of the mound, even to the level of the furnaces. Respecting the quantity in the mountain, it is enough to say, that it is practically inexhaustible. The line of the St. Louis and Iron Mountain Railroad passes immediately west of the works, affording easy and most convenient railroad access to the mound, the furnaces, and the base of the mountain."

AIR LINE RAILROAD.—The Lacon Gazette says the work of construction on this road, will begin in Illinois, Indiana, and in Iowa, as soon as the necessary preparations can be made, arrangements to that effect having been made with the contractors a few days since. Mr. Gest has resigned the presidency, and Hon. Robert C. Schenck, of Ohio, has been elected president of the company.

Railroad Printing.

WE have now attached to this office an extensive **Composition** and **Press Room** and **Bindery**, under the personal supervision of the proprietors of the RECORD. With confidence, therefore, we call the attention of RAILROAD OFFICERS and others to our extensive establishment, containing every facility for turning out superior work in any and every department of the PRINTING BUSINESS.

We are fully prepared to furnish **Railroad** and other **Reports**, with or without **Maps** or other **Illustrations**, gotten up at short notice and in superior style. Also, **Blanks of any description**, adapted to the wants of the various departments of the **Railroad service**, and to the wishes and tastes of the parties.

Also, **Railroad Tickets** and **Conductors' Checks**. Our patent **Card Press**, enables us to supply any demand at **Short Notice** and in **Unequalled Style**.

Also, **Blank Books**, ruled to any pattern, with or without **Printed Headings**, and bound in the most substantial manner.

With the numerous facilities for doing the **Best Work**, we feel no hesitancy in promising full satisfaction to all who may favor us with their orders.

T. WRIGHTSON & CO.,
Rail Road Record Office, 167 Walnutst Cin.

GAS.

AUBIN'S PATENT.—We are agents for this new and improved furnace, and having had one in operation at our office for several months past, can confidently recommend it as being simple in its operation, occupying little room and furnishing a pure and beautiful burning gas. From the peculiar arrangement of the retort it is not liable to *burn out*, thus saving a great part of the expensive repairs of other furnaces. We are prepared to erect these furnaces at our own risk and warrant them to produce good gas.

CHARLES FRODSHAM'S

IMPROVED WATCHES!

BEGGS & SMITH,

JEWELERS,

No. 6 West Fourth St.,

Adjoining the First Presbyterian Church,

CINCINNATI, O.,

HAVE received from Mr. Simon Willard, Boston, Agent for the United States, the sole and exclusive agency for the sale of **CHARLES FRODSHAM'S** NEW SERIES OF IMPROVED CHRONOMETER WATCHES, in the states of Ohio, Indiana, Illinois, Michigan, Iowa, Wisconsin, Missouri, Kentucky and Tennessee.

In the Watches of the New Series, Mr. FRODSHAM has succeeded hy a more perfect method of compensation, a more correct adjustment in isochronism, and an entirely new and peculiar construction of the train, by which more power is obtained without increase of size, in producing timekeepers of wonderful and unrivalled accuracy. The great importance of the improved watches is a perfect regularity of time under every variety of climate, motion and position. So perfect are the adjustments, that the most violent exercise, such as horseback riding, jumping, etc., produces on them no sensible effect They are therefore, particularly adapted to Railroad purposes.

Liberty is given to refer to the following gentlemen, who, among many others, have proved the excellence of Charles Frodsham's Watches as timekeepers:

Gen. John S. Tyler	.....	Massachnsetts
John E. Thayer, Esq.	.....	"
Enoch Train	.....	"
E. C. Bates,	.....	"
F. W. Thayer,	.....	"
Wm. Whiting,	.....	"
Geo. M. Thacher,	.....	"
David Dyer,	.....	"
Alvin Adams,	.....	"
Billings Briggs,	.....	"
David Weld,	.....	"
Hon. Ebenezer Lane, } E. F. Osborne, Esq. }	.....	Sandusky, Ohio.

The Prices of the New Series Gold Cases, are According to Size, viz:

SIZE 12	.....
" 14	..... $230
" 16	.....
" 18	 250
" 20	 275
" 22	 300

Recommendations:

Boston, Sept. 3, 1853.

The Compensated Lever Watch I purchased of you, made hy Charles Frodsbam, London, No. 7300, has varied hut thirty seconds from mean time in six months, hy actual daily comparison with your regulator.

Yours, &c., ALVIN ADAMS.

Mr. Simon Willard.

Boston, Feh. 4, 1854.

Mr. S. Willard Dear Sir—The Frodsbam watch, No. 7557, I purchased of you last Octoher, has performed wonderfully well. I have compared it almost daily hy your Astronomical clock, and its variations for ninety days is but one second, or a loss of hut one-hundredth of a second per day. I consider it hetter than any Marine Chronometer I ever used.

Yours truly,
FISHER A. NEWELL,
Late master of Sch., Honolulu.

Sandusky, Ohio. Jan. 1, 1854.

Mr. S. Willard, Dear Sir—More than six months ago I purchased of you two of Frodsham's hest watches—up to this time, one of them, No. 7571, has altered from mean time hut twenty-seven secouds, and the other, No. 7517, hut twenty-three seconds in the same period.

Yours, respectfully.
E. F. OSBORNE.

To Mr. Simon Willard.

Gentlemen—On the 1st of April last I procured from Mr Willard, of Bostou, one of Frodsham's improved series of watches. It was regulated and set to Cincinnati time. It has not, in that period, been suffered to run down, nor bave the hands been moved, and to day it is 20 seconds only slow. Respectfully yours,

HENRY O. AMES,
Sup,t Cin. Ham. & Dayton Railroad.

August 18, 1854.

To Messrs. Beggs & Smith.

The following is an extract from a letter of William Brown, Esq., Springfield, Ohio, engineer on the M. R. & L. E. R. R., who has personally kept the rate of several of Frodsham's watches.

"Finally from what I have known of Frodsham's watches, I am very strongly impressed with the idea, that they are a decided improvement on all other timekeepers, and were they set in gimhalls and used with the same care, I think their performance would equal that of Mr. Frodsham's celebrated box chronometer, and would answer the same purpose for determining longitudes."

DENNEY'S DIVIDED CAR AXLE.

PATENTED JANUARY 31ST, 1854.

THE ATTENTION OF RAILROAD COMPANIES is respectfully invited to an examination of the merits of this valuable invention, which offers to add largely to the safety of life and property.

The valuable features of this arrangement of axle are, a saving of full fifty per cent. in motive power on crooked roads: the rails are protected from being destroyed by the flanges of the wheels coming in contact with them on the curves, as is the case with the stiff or rigid axle, which not only destroys the rail but puts a constant strain upon the wheel and axle, causing the wheel on the inner rail to trip or revolve upon the rail under the weight of the car and its load, while the opposite wheel is traversing its greater distance; the tendency of which, is to wear the wheel flat, and cause it, or the axle, to break sooner or later. There is less danger of the car leaving the track from its having become spread.

Axles fitted in this way do not require to be near so large, and yet contain more strength than the common axle, for the reason that the liberty given to the wheels, which allows them to accommodate themselves to the curvatures of the road, removes wholly the strain thrown upon the ordinary axle; and therefore, it requires no more strength of iron at any point between the wheels, than is contained in the bearings, which in the ordinary axle, is not more than one-third of the strength of the other portions of the axle.

The elongated bearing which forms the connection is so proportioned as not to wedge or become tight in the alloy, the wear being almost imperceptible, requiring to be set up not oftener than once in twelve months, by a slight tightning of the screw nuts. If, from long service, the alloy becomes worn out, it can be refilled, making it as perfect as when first filled up, and the gauge of the wheels will never become changed so as to injure the running of the car.

It is after a series of the most careful experiments, conducted through a period of time sufficient to test in the most satisfactory manner, the real merits of divided car axles, and a thorough and practical test in real service of over two years, that we now offer to Railroad Companies one that we are assured will give universal satisfaction in its operations, and both simple and cheap in its construction.

We are now ready to dispose of rights to use the above axle on the following terms: We guarantee full and perfect satisfaction by giving ample time to thoroughly test its merits, and will require no payment to be made until such satisfaction has been given. All applications to be made to

SAMUEL L. DENNEY,
Christiana, Pa.
Or, to **CHRISTIAN UMBLE,**
Gap, Pa.

y.10†

TYLER DAVIDSON & CO.,

Agents for the

BOSTON BELTING COMPANY

India Rubber Machine Belting in any quantity, from 2 to 20 inches.

India Rubber Steam Packing;
Mixed do do 1-32 to ¼ inch thick.
Plain do do 1-32 to 1 inch thick.
Pure do do
Pipe and Manhole Rings, all sizes;
Square or Rope Packing, do.

HOSE.

India Rubber, Hydrant, Conducting, Fire Engine, and Locomotive, of all sizes, manufactured from the best of Vulcanized Rubber, and for sale only by the agents.

Car Springs, and all other kinds of Vulcanized India Rubber used for Mechanical and Manufacturing purposes.

The undersigned, having been appointed Agen of the Boston Belting Company, beg leave to advise Dealers and Consumers that they are now prepared to supply the above goods in any quantities, on the most favorable terms. On hand and for sale,

50,000 Feet Vulcanized India Rubber Machine Beltings, from 2 inch to 20 inches, 3 and 4 ply.

TO STEAMBOATS AND RAILROADS.

India Rubber Hose, for Pavements, Streets, Gardens, Locomotives, Engines, etc.

40,000 feet Hose, 3, 4, 5, 6, and 7 plys, suitable for pavements, streets, gardens, locomotives, fire engines, etc., 1 to 3 inch, warranted extra quality. Also,

THE vulcanized India Rubber Break Springs now in use by all the Eastern Railroads, and posessing decided advantage over the Steel Springs now in use, for the following reasons:

1st, They are much easier put on.
2d, They are a great deal cheaper.
3d, They are much more durable than steel, and no time lost in making them, the weather having no effect on them.

ALSO—Large 6 inch hose for water stations. This is a new and important invention. The coldest weather will have no effect on them whatever They are warranted to remain as pliable, in the COLDEST of weather, as they are in 150 Fahrenheit heat.

Armitage Anvils,-10 casks, assorted weights n w in store.

Allen's Revolvers and Self-Cocking Pistols.—Now in store, a large assortment of the above, 3, 4, and 5 inch Revolvers; 3, 4, 5, and 6 inch Pocket Pistols. Also, Dueling Pistols.

Leland's Superior C. S. Car and Auger Bitts.—All sizes.

Brass Kettles, and Sheet Brass, &c.—Brass Kettles, assorted from 6 to 30; Sheet Brass assorted from No. 0 to 30; Brass Wire, do do do.

Star Breast Chains.—Four casks of those superior double-linked Chains, just received.

Walker's Trace Chains.—70 casks of those superior goods, warranted full length and sizes, 8 to 20 links, straight and twisted, now in store.

American Anvils.—Eagle brand, faced with with cast steel, and warranted by the manufacturers equal to Armitage's Mousehole.

Plated Spoons.—Plain, tipped, and threaded heavy plate, on best quality of German Silver.

Premium Gimlet Screws.—10,000 gross just received.

Mill Saws. Hoe & Co.'s C. S. Wm. Rowland's, and W. H. Rowland's 6, 6½, 7, 7½, and 8 ft

Cross Cut Saws.—Hoe & Co.'s C. S., John ockercll's C. S. and G. S., Wm. Rowland's and W. & H. Rowland's 5, 5½, 6, 6½, 7, 7½, and 8 feet Also, 4 and 4½ feet Tennon Saws.

Axes—1000 doz. Axes, assorted Yankee and Kentucky patterns, first, second, and third quality

Nails.—4000 kegs Shoenberger's and Wheeling Nails, now in store.

For sale by TYLER DAVIDSON & CO.,
mr 3 140 and 142 Main street

RAILROAD MAP.

WE have now ready A RAILROAD MAP OF THE WEST, containing ALL THE RAILROADS constructing, completed, or proposed in the States of Ohio, Indiana, Illinois, and Kentucky, and portions of Wisconsin, Michigan Pennsylvania, Virginia, Tennessee and Canada, showing the termini, points upon the lines, connections, &c. of each line, all laid down accurately, by a competent hand.

The size of the sheet is 24 by 38 inches, and can be sent by mail.

Price—plain..... 40 cents.
Colored in outlines..... 50 cents.
Full colored ..... 75 cents.

Liberal discounts will be paid to those wishing them in quantities.

Railroad companies desiring a map to illustrate their road cannot find one offering greater inducements as to correctness, &c., or on better terms; as any line can be made prominent, with its connections, &c.

All orders addressed to U. P. JAMES will secure prompt attention

ENGINEERING!!

The undersigned is prepared to furnish
SPECIFICATIONS, ESTIMATES, AND PLANS,
In general or detail of all kinds of
Steam Vessels, Engines, Boilers, Mill Work, &c
Particular attention given to the superintending of
LOCOMOTIVES, TENDERS, CARS,
And Railway Machinery of every Description,
While under construction.

AGENT FOR THE PURCHASE of, on commission, all articles required for Railroads, Steam Vessels, Locomotives. Engines, Boilers, Machinery, &c.

General Agent for
ASHCROFT'S STEAM GAUGE, ALLEN AND NOYES' METALIC SELF ADJUSTING CONICAL PACKING, DUDGEON'S HYDRAULIC JACK.

Also, for Water Gauges, Indicators, Steam Whistles, &c., &c.

Sept. 21-3* Philadelphia, Pa.

COLUMBUS PIQUA, AND INDIANA RAILROAD.

New route from Columbus, West and from Urbana, East.

On and after Monday September 19, 1853, two trains per day, (Sunday excepted) each way, will run on this Road, between COLUMBUS and URBANA. Will leave Columbus at 4.50 a.m., and 3.30 p.m.—arriving at Urbana at 8.12 a.m., and 6.14 p.m. Returning—will leave Urbana, for Columbus, at 9.15 a.m., and 3.00 p.m.—arriving at 12.05 and 6.55 p.m.

The 4.50 a.m. train, from Columbus, will connect with the night Express train from Cleveland and arrive at Urbana in time for the morning train north for Sandusky and intermediate points. Persons arriving by the morning Cleveland and Zanesville trains can have a few hours at Columbus and leave by the 3.30 p.m. train—arriving at Urbana in time to get supper and take the 5.35 p.m. train for Dayton and Cincinnati.

The 9.15 a.m. train from Urbana connects with the morning train from Cincinnati and Dayton that arrives at Urbana 8.40 a.m.—arriving at Columbus at 12.05 p.m in time for the 1 p.m. train for Cleveland, connecting with the Buffalo and Dunkirk boats. The 3.00 p.m. train will leave Urbana on the arrival of the Sandusky train—reaching Urbana at 2.45 p.m.—and arrive in Columbus in time for the various night trains.

A line of Omnibuses will connect with the trains at Urbana for the conveyance of passengers to and from Piqua and Greenville over a good Macadamized road.

Baltimore & Ohio Railroad.

380 MILES BETWEEN WHEELING AND BALTIMORE.

THIS Road was opened to the Ohio River in the spring of 1853, and has already established a high character with the business community of the West. Its facilities for the transportation of freights are already superior to those of any other great through line—while the attractions of the country through which it runs, and its many admirable provisions for the expedition, comfort and safety of travelers, it has received such favor as a passenger road, (with its present connections,) as to show that it will become the preferred route for all portions of the West and South-West as soon as its further connections are formed by the completion of the Central Ohio, North-Western Virginia and other Railroads now rapidly finishing.

FOR PASSENGERS BY THIS ROUTE,
Through Tickets from all Parts of the West,
ARE NOW SOLD IN
Cincinnati, Louisville, Madison, Indianapolis, St. Louis, Chicago, Toledo, Detroit, Cleveland, Columbus, Zanesville and other Cities.

AT ALL OF WHICH ARRANGEMENTS HAVE BEEN EFFECTED

For Sending Travelers Direct to
WASHINGTON, BALTIMORE, PHILADELPHIA, NEW YORK, and other ATLANTIC CITIES.

FOR FREIGHTS IN EITHER DIRECTION
The fullest accommodations are provided. In motive power and Cars, the company has abundant resources, which are being further extended to meet the demands of Western Trade. In the dispatch and regularity of transpart, and in the careful landing of property, this road challenges a comparison with its rivals. At Baltimore, the road connects directly in the streets and at the wharves with the

PHILADELPHIA AND NEW YORK RAILROADS,
The numerous Steamers of the Parker Vein Line to New York and Boston, the Ericsson Steamers by Canal to Philadelphia and New York,
And various other Lines of Steamers and Sailing Vessels to the Eastern Ports, and to Richmond, Norfolk, Charleston, Savannah, etc.

J. B. FORD is the Company's Receiving Agent at Wheeling.

Je.8-tf Louisville, Ky.

Lightner's Patent Axle Boxes for Railroad Cars.

THE attention of Railroad Managers and others is called to this valuable improvement in
AXLE BOXES.

The first cost and "fitting up" of these boxes is 20 to 25 per cent below that of most boxes in use. They will save about 75 per cent in consumption of oil. The construction is simple; they are not liable to become loose, nor "heated" by severe service. The Reservoir is held close to the shaft, and the oil journals, are secure from dust yet easy of access; the brasses may be removed from the journals, while under the car, in a few minutes. Cars furnished with these boxes run from 4 to 5 weeks without replenishing the oil, and are not detained from the road for repairs ONE TENTH part of the time which is necessary when other boxes are used.

The business of a railroad can be done with a much less number of cars, with these boxes than if any other kind are used.

The first railroad men in the country have certified that Lightner's improvements in AXLE BOXES are among the first of the times.

Models and Testimony of the above Boxes, may be examined, and arrangements may be made for the right to use the same, with the subscriber.
WILLIAM SHERBURNE,

OHIO SCALE WORKS.

Rigdon, Ryland & Co.,

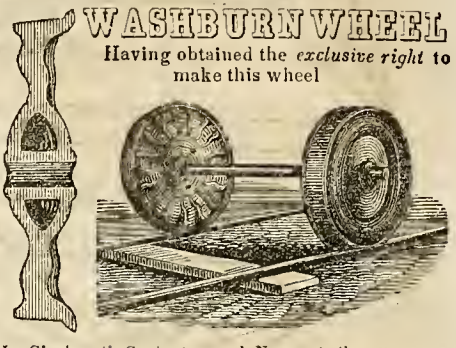
No. 39 Vine Street, between Front and Columbia streets,

CINCINNATI.

WE are now prepared to furnish **Railroad Track and Depot Scales** of all sizes, which we warrant in every respect equal to any manufactured in the United States.

Being practical workmen ourselves, we feel confident that we can furnish the West and South with as good an article and cheaper than can be bought East.

Cincinnati, June 20, 1854.



FULTON CAR WORKS,

CINCINNATI, OHIO.

THE Proprietors of this establishment would respectfully call the attention of Railroad Companies in the West and South to their establishment at Cincinnati.—Their facilities for manufacturing are extensive, and the means of transportation to the different points speedy and economical. They are prepared to execute to order on short notice, eight-wheeled Passenger Cars of the most superior description. Four or eight-wheeled Baggage, Cattle, Freight and Gravel Cars. Also, Crank and Lever Hand Cars, Trucks, Wheels, and Axles fitted.

WASHBURN WHEEL

Having obtained the *exclusive right* to make this wheel

In Cincinnati, Covington and Newport, they are now prepared to furnish Railroad Companies with that Celebrated wheel, with or without Axles. Also, Journal Oil Boxes of any pattern, and Castings for cars fitted to order at the shortest notice.

Address KECK & HUBBARD,
Fulton Car Works Cincinnati, Ohio.
ap.12 Office 62 East Second Street.

MUSKINGUM WORKS,

ZANESVILLE, OHIO.

DOUGLASS, SMITH & CO.

WOULD respectfully call the attention of Railroad Companies to their establishment at Zanesville They are prepared to execute orders, on short notice, for

Passenger Cars of the most superior description,

Second Class Passenger, Mail Express, and Baggage Cars; Freight, Cattle, four or eight wheeled Gravel Cars.

We manufacture a superior

CAR WHEEL,

Over 2500 of which are now running on the Central Ohio Railroad, and many of these have been in use on the road over two years, having in that time only three to crack, and two to be renewed in consequence of the wearing of the Chill. We have also commenced the manufacture of the celebrated

WASHBURN WHEEL,

And are prepared to furnish this wheel, with or without axles. Also, castings for Cars fitted to order at the shortest notice.

BOLLMAN'S PATENT IRON & WOOD BRIDGE.

We are also agents and builders of the above celebrated Bridge. Are now placing upon the piers an iron bridge on this plan over the Muskingum river at Zanesville. We are ready to contract with companies for the construction of this Bridge. All orders addressed

DOUGLASS, SMITH & CO.,
au4tf. Muskingum Works, Zanesville, O.

J. DAVENPORT.... M. D. WELLMAN.... C. M. RUSSELL

DAVENPORT, RUSSEL & CO.,

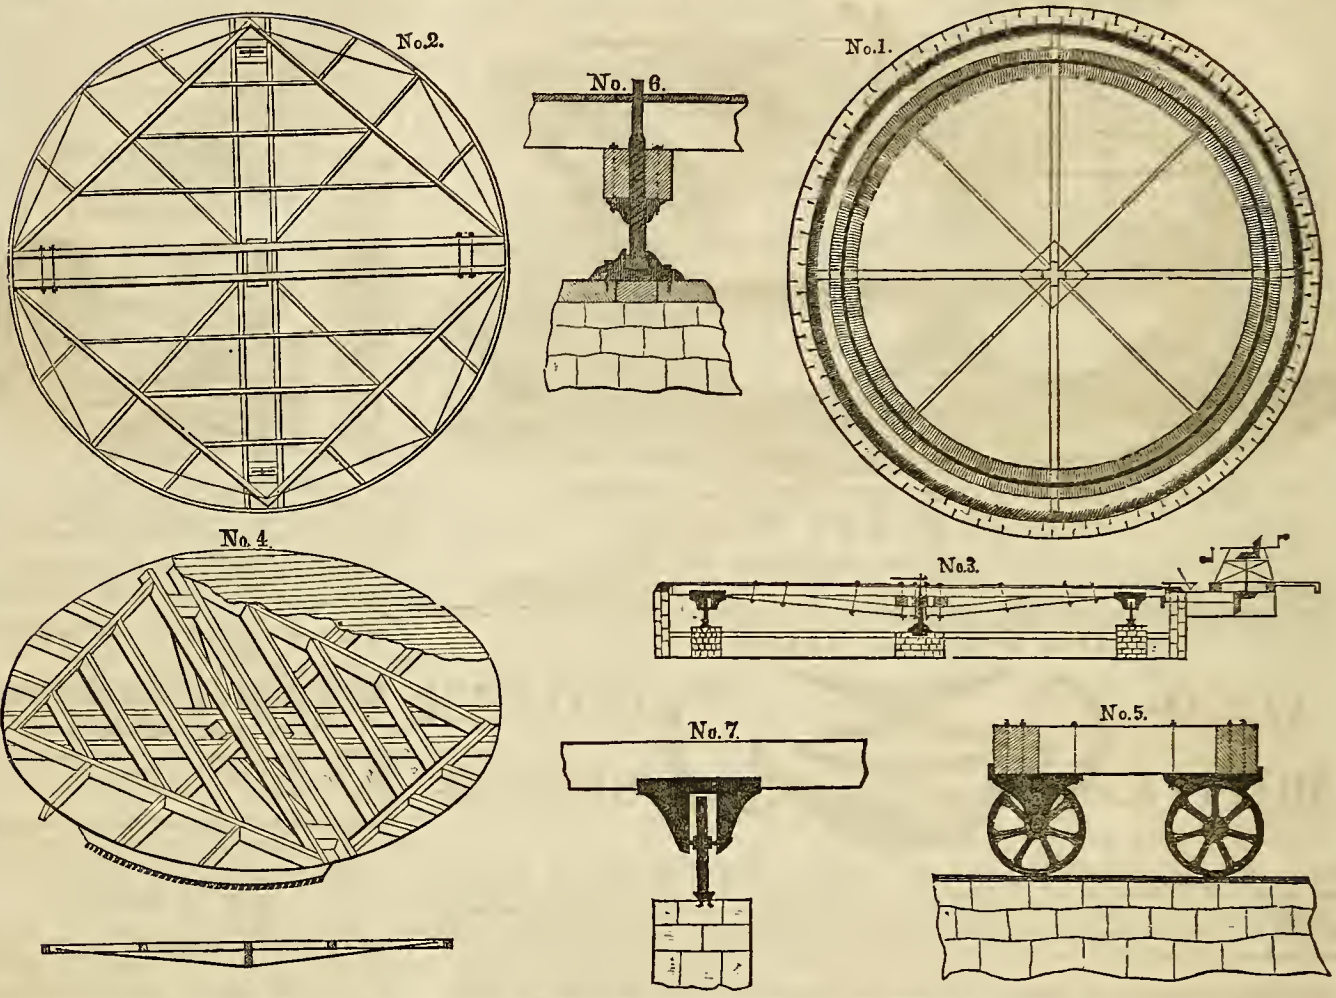
Railway Car Manufacturers,

MASSILON, OHIO.

THE subscriber, late of the firm of Davenport, Bridges & Co., Fitchburgh, Mass., having associated himself with Messrs. Wellman and Russell, under the above name, would respectfully solicit calls for any kind of Passenger, Baggage, Post Office, Freight, Coal, Gravel or Hand Cars.

Having had fifteen years experience in the business and having secured the best of workmen from the Car Factory in Cambridge, Mass., I feel confident that perfect satisfaction can be given in all work entrusted to our care.

We have now on hand the best of dry White-Oak with which we think we can build Cars as cheap and as well as any other establishment in the States.



Feb. 16†* JOSEPH DAVENPORT.

RAILROAD IRON, LIGHT WEIGHT.

470 TONS, 47 lbs. per yard, good quality and pattern, now lying at New Orleans. For terms apply to VOSE, PERKINS & CO.,
ap27-1f New York

CARHART'S IMPROVED TURNTABLE.

Now building for 13 of the Principal Roads in Ohio, Indiana, New York, New Jersey, and North Carolina.

This Table, together with an Engine and Tender of 30 Tons Weight, can be Turned by One Man in 25 Seconds.

RAILROAD COMPANIES in want of *Turntables* of a permanent and durable character, at a low price, are respectfully referred to the annexed references. The undersigned being confident that the manner of turning engines by his Table is the most permanent, expeditious, and cheapest in the United States, solicits the attention of Engineers, and others, to his improvement. The undersigned being a practical mechanic, and having devoted his time, for the past five years, exclusively to the construction of Turn and Transfer Tables, Draw and other Bridges, is prepared with every facility for executing orders in that line with promptness and satisfaction.

The price, which is always based upon the use of the best materials and best workmanship which can be procured in the market where used, can be determined only by the locality.

DESCRIPTION OF PLAN.

Fig. 1, of the above cut, represents the foundations, consisting of *Bank* and *Track Walls*, the latter made of cut, the former of hammer-dressed stone, with cut stone coping. The Track is bent of the ordinary T rail, spiked and leaded to the stone track walls. The Center Pier is made of cut stone, with a step for screw and pivot bolted to the same.

Fig. 2, shows the framing.

Fig. 3, is a side view of Main Truss, with the mode of gearing, including the mitre-wheels, iron crank frame, rack and pinion, foundations, pivot wheels and pedestals.

Fig. 4, gives a perspective view of rim, segments, decking, etc.

Fig. 5, is an end view of the main trucks, with pedestals and wheels.

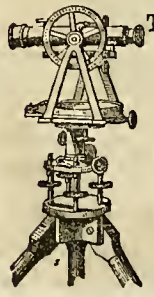

Fig. 6, is a screw for pivot, 6 inches in diameter, working in a steel step through a nut for adjustment.

Fig. 7, shows a cross section of track wall, well, and pedestal.

CINCINNATI:
THURSDAY MORNING,.....DEC. 21, 1854

E. D. MANSFIELD,

May be found at the office of the *Railroad Record*, 167 Walnut st., between the hours of 11 A. M. and 1 P. M.

Railroad Printing.

WE have now attached to this office an extensive **Composition** and **Press Room** and **Bindory**, under the personal supervision of the proprietors of the RECORD. With confidence, therefore, we call the attention of RAILROAD OFFICERS and others to our extensive establishment, containing every facility for turning out superior work in any and every department of the PRINTING BUSINESS.

We are fully prepared to furnish **Railroad** and other **Reports**, with or without **Maps** or other **Illustrations**, gotten up at short notice and in superior style. Also, **Blanks of any description**, adapted to the wants of the various departments of the **Railroad service**, and to the wishes and tastes of the parties.

Also, **Railroad Tickets** and **Conductors' Checks**. Our patent **Card Press**, enables us to supply any demand at **Short Notice** and in **Unequalled Style**.

Also, **Blank Books**, ruled to any pattern, with or without **Printed Headings**, and bound in the most substantial manner.

With the numerous facilities for doing the **Best Work**, we feel no hesitancy in promising full satisfaction to all who may favor us with their orders.

T. WRIGHTSON & CO.,
Rail Road Record Office, 167 Walnutst Cin.

GAS.

AUBIN'S PATENT.—We are agents for this new and improved furnace, and having had one in operation at our office for several months past, can confidently recommend it as being simple in its operation, occupying little room and furnishing a pure and beautiful burning gas. From the peculiar arrangement of the retort it is not liable to *burn out*, thus saving a great part of the expensive repairs of other furnaces. We are prepared to erect these furnaces at our own risk and warrant them to produce good gas.

T. WRIGHTSON & CO.,
167 Walnut-st., Cin'ti.

A NEW BOARD.—The annual meeting of the stockholders of the New York Central railroad company was held at Albany on Wednesday, and resulted in the election of Erastus Corning, of Albany, Dean Richmond, of Buffalo, John V. L. Pruyn, of Albany, Joseph Field, of Rochester, J. H. Cheddell, of Auburn, Horace White, Syracuse, Alonza C. Paige, of Schenectady, Russell Sage, of Troy, E. C. McIntosh, of Albany, Nathaniel Thayer; of Boston, Schuyler Livingston, of New York, Edward G. Faile, of New York, John F. Seymour, of Canandaigua, as the new Board of Directors. The last four names in place of Messrs. Boody, of Rochester, Wager, of Utica, Wilkinson, of Syracuse, and Gibson, of Canandaigua.

RAILWAYS OF MICHIGAN, WISCONSIN AND IOWA.—REVIEW.

Having reviewed the system of Railways, in Ohio, Indiana, and Illinois,—there remains in the North-west the States named above, to complete the whole. So recent is the railway movement in these States, that it is almost impossible to make an accurate statement; but, in our summary, we shall endeavor to correct such errors as may occur. Michigan was quite early in the railway movement, but has not made much progress, after the completion of the two great lines running to Chicago. There are plans formed for some extensive works, but they are not yet in progress, and will not be, till the financial difficulties of the country are removed. It must be recollected, that we credit to each State, only the number of miles which lies *in the State*. In the summary of the whole, we shall show the whole length of each line. The following are the railways in Michigan :

	COMPLETE.	IN PROGRESS.
Michigan Central,.....	220 miles.	
Detroit & Pontiac.....	25 "	
Michigan Southern,....	128 "	
Erie & Kalamazoo,.....	33 "	
Detroit & Niles,.....	20 "	
Tecumseh, ...	8 "	
Total,	434	

All these roads were made several years ago; since which there has been a singular sluggishness there in railway construction. The whole north and center of the State is wholly unprovided with railways. The consequence is, it is almost unsettled, and it requires no prophet to know, that unless the State takes some active measures to forward railway improvements, the greater part of the State will remain without progress. To obviate this, two lines of railway have been planned, which if completed, would be of immense value to the State; but they are not yet in progress. One is a railroad from Detroit, in the direction of the Lake Superior Mining District. The other is the *Cincinnati and Mackinaw* Line, which at some period will be completed, and be one of the most important lines in the United States. This line will extend from Greenville, Ohio, near 100 miles from Cincinnati, to the Strait of Mackinaw, *via.* Defiance and Hillsdale; when it is made, it will accomplish two great objects, which can be done in no other mode. *First*, it will be the shortest line between Lake Superior and the Gulf of Mexico; and *secondly*, it will develope the immensely valuable Lumber and Mineral Regions of Upper Michigan. We have not, however, put it down as *in progress*, because the scheme is not in activity.

—

RAILWAYS OF WISCONSIN.—Wisconsin is in advance of Michigan, as to present progress; for, though there are few miles completed, there are many more in progress, with hopes of speedy completion. The following is the present condition of Wisconsin railways, viz:

	COMPLETE.	IN PROGRESS.
Milwaukie & Mississippi,..	88 miles.	....70 miles.
Milwaukie & Chicago,.....	40 "	
Illinois & Wisconsin,.....		.....30 "
Beloit & Madison Branch,..	45 "	
Milwaukie & Watertown...		.....0 "
Road River Valley Union,..		.....86 "
Beloit & Kenosha,.....		.....50 "
Green Bay & Milwaukie,...		.....110 "
Aggregate,	173	396

These roads all lie in the Southern part of the State; and in the region immediately West of Milwaukie.

The *Milwaukie and Mississippi* line, has, from its opening (on the part finished) paid very well, and is rapidly increasing. This must be one of the really *good* lines; which in all times will pay well. There are other lines of railway undertaken in Wisconsin; of which we have now no accurate account.

—

RAILWAYS OF IOWA.—It is difficult to ascertain the precise state of the plans in Iowa; but the following are those which we recognize, as likely to be realized:

	COMPLETE.	IN PROGRESS.
Platte Valley, Air Line,....	——	.....273 miles.
Oquowka, and Otumwa & Oskaloosa,.....	——	.....100 "
Davenport, Iowa City & Knoxville,.....	——	.....130 "
Burlington & Missouri,.....	——	.....300 "
Dubuque & Keokuk,.....	——	.....180 "
Aggregate,		983

We know not what immediate prospect there is of the completion of either of these roads; but it is certain that Iowa needs them; and that those which cross from the Mississippi to the Des Moines and the Missouri, will in the end be profitable.

The President of the Fort Wayne, Lacon and Platte Valley Air Line, states that there are one million of dollars subscribed to that work in Iowa. If so, it shows that the people there are zealous in the enterprize. The lines from Burlington and Oquowqua, West, will probably be completed first. In the present depression of finances, it is not probable either of them will go on, till brighter days. In the meanwhile, the rich lands of Iowa, now fast taken up, will be far less valuable than they might be, and much less than the emigrants there suppose; for in this day of rapid communication, it is almost equivalent to destroying the market value of lands, to place them out of the reach of the great highways. Land in Ohio, at $30 per acre, is much cheaper than land in Iowa, not on the Mississippi, at $3,00. It will bring a larger income in ready money. This is a thing emigrants should look to before they go to new countries.

Railroads.

CINCINNATI AND CHICAGO R. R.

It will be remembered that on the 30th of August last, the Cincinnati and Chicago, and the Cincinnati, Logansport and Chicago Railroad Companies were consolidated and formed a single organization, to be known as the Cincinnati and Chicago Railroad Company. There were several obvious reasons for this action on the part of the Companies, and it was supposed that the consolidation would give to both parties greater strength, and insure the confidence of the public. The road as thus consolidated will be 254 miles in length, and would cost about $10,000,000. Of this there is capital stock already issued about - - - - - - - - - $3,500,000
Bonds, - - - - - - - - 550,000
Sterling Bonds, - - - - - 1,000,000
$5,050,000

There has been already expended on the road $2,500,000, and the point at which the Company is aiming at present, is to finish the road from Richmond to Logansport, a portion of which on the southern sections is partly laid. When this is accomplished there will be 108 miles of the main line in operation, and will bring Logansport in direct communication with Cincinnati by means of the Eaton and Hamilton Railroad. At Anderson, it forms a connection with the Bellefontaine and Indianapolis Railroad, 36 miles from Indianapolis on the latter road. At Kokemo, 21 miles from Logansport, there is a connection with the Peru and Indianapolis Railroad, thus forming a direct line from Logansport to Indianapolis.

Owing to the financial difficulties of the times, the Company have become much embarrassed in their operations, and cannot proceed without some additional aid. For this purpose, the President of the road, Caleb B. Smith, with others of Cincinnati, called a public meeting at the Merchant's Exchange, on the evening of the 15th, to devise means to relieve the company of its embarrassments. Prof. Twining, of Indiana, was called to the chair, and James D. Taylor was appointed Secretary. Mr. Smith entered into a detailed statement of the present wants and financial condition of the Company. He stated the difficulty of obtaining loans in the usual manner, in consequence of the general consternation about the stock of the road, it having been sold at six and seven cents on the dollar. All sorts of rumors had been spread abroad about the road, and the good feeling of Cincinnati alienated from the enterprise. This however was not an unusual thing in a new enterprise. The Little Miami, now the Model Railroad of the country, had once been so embarrassed, that it was compelled to solicit loans from person to person in trifling sums. Yet it was now a source of profit to its stockholders, and an inestimable benefit to the city. And so he hoped it would be with the Cincinnati and Chicago Railroad, that in spite of present difficulties it would yet become one of the best paying Railroads in the West.

They had 4,000 tons of iron rails at Toledo, 670 at New Orleans, and 400 at Cincinnati. On this iron, the freight charges and commissions amounted to $15,000. This amount, together with $100,000 of floating debt, was the chief embarrassment of the Company. Millions of capital were already locked up in the road, and this loan of $115,000 would make this capital productive. The remedy proposed was to send two of the agents of the Company, Messrs. Rogers and Moore, with the following subscription paper; and if the object aimed at was effected, get the road to Logansport running for the present, when Chicago would add one million of dollars to their subscription of stock.

PLAN OF THE PROPOSED LOAN.

"In order to aid the Cincinnati and Chicago Railroad Company, in their efforts to complete their road from New Castle to Logansport, and to assist in paying off their floating debt. We whose names are hereunto subscribed, do each agree to loan the Cincinnati and Chicago R. R. Co., of Indiana, the sums set opposite our names, for the period of two years, to be paid in six equal instalments of 60 days, commencing on the 1st day of March next. Provided, that this subscription shall not be binding until the sum of one hundred and fifty thousand dollars shall be subscribed on the same terms; so soon as that amount shall be subscribed, we agree to execute our notes to the said Company for the amount subscribed by us, payable in six instalments as above, one payable the first of March next, and the balance in five instalments at intervals of 60 days thereafter.

The said money to be repaid to us in two years from each payment, with interest at the rate of ten per cent per annum, and which shall be secured by the transfer to Trustees of first mortgage bonds on the road, at the rate of eighty per cent of the par value, or of real estate at a valuation by disinterested appraisers, of fifty per cent beyond the amount of the loan, which bonds or real estate shall be held by such Trustees, as a security for the repayment of said loan."

Mr, Smith was followed by Col. Maredith, Vice President, who urged the importance of the road as a public and commercial thoroughfare. Much interest was manifested, and it is hoped that the means taken will be found efficient to secure the advancement of the work.

THE FISHKILL ROAD.—The Providence Journal states that notwithstanding the extreme stringency of the money market, more than $200,000 of the guaranteed and preferred 10 per cent. stock of the Hartford, Providence, and Fishkill Railroad Co., was subscribed for by stockholders on or before the 1st of December, on which day the exclusive right of the stockholders to subscribe for the stock ceased.

FIRST ANNUAL REPORT OF THE MEMPHIS AND OHIO RAILROAD.

This company was organized on October 4, 1853, and has, for its primary object, to connect Memphis with Cincinnati, Louisville, and the valley of the Ohio river. The original charter which was granted Feb. 4, 1852, under the name of the Memphis and Nashville R. R., required the Company to construct a road from Memphis to Nashville, and granted State aid to the amount of $8,000 per mile, on condition that they should obtain a bona fide subscription sufficient to grade, bridge, and prepare for the iron the whole distance from Memphis to Nashville. This charter was subsequently amended and the present name adopted. The company are now to construct a road from Memphis to Paris, and State aid is granted to the amount of $10,000 per mile and $100,000 for bridging the Big Hatchie River. If the company hereafter find it advantageous to unite with the Memphis, Clarksville, and Louisville Railroad Company, they will still have State aid to the line of Kentucky, and $200,000 for bridging the Tennessee and Cumberland rivers. In November, 1853, field parties were organized and the work of surveying begun. The road was finally located through Cherryville to Trenton, and the contract awarded to Messrs. Harris, Black & Co., for the entire construction from Memphis to Trenton, ninety miles to be completed by the 1st of May, 1856. The report proceeds to say:—

The first division of thirty miles is to be finished, equipped, and in running order, by the 1st of July, 1855. The second division of twenty miles, or to the north bank of Big Hatchie river, in like manner is to be finished by the 1st of October, 1855. The third division, from Big Hatchie to Trenton, a distance of forty miles, by the 1st of May, 1856. The contractors are to be paid as they finish the work by the sections mentioned, twenty-five thousand dollars per mile, viz:

State Bonds, which are to be applied solely to the purchase of iron and equipments.....$10,000
In cash per mile,..... 2,500

The other half in County or City bonds and stock in the road in equal proportions at par.

The contract with Messrs. Harris, Black & Co., for 90 miles, amounts to two million two hundred and fifty thousand dollars. The available means of the Company to comply with their contract with them, it appears from the lucid and very interesting report of the Secretary of the Company, to which you are referred, consists of individual subscriptions, including the amount taken by contractors:

Individual subscriptions amounting to.....$867,500
Subscription by the County of Shelby..... 300,000
Subscription by the City of Memphis..... 100,000
State bonds of Tennessee..... 900,000
$2,167,500
Leaving a deficit of..... $82,500

To be raised by additional subscriptions, to complete and pay off the present contract, and also the further sum necessary to pay Engineering expenses, salaries, land damages, depot grounds at Memphis and contingencies, which may be estimated at $200,000 more, in all, - - - - - - $282,500

To raise this sum, the Directors, with confi

dence, appeal to the citizens of the country who are directly interested in the construction of the road, who have the ability to help, and particularly to those who have not heretofore subscribed.

The Directors are aware that it is usual to commence such undertakings with an insufficient amount subscribed to construct them, relying upon raising money by selling stock upon mortgages, deeds of trust, preferred stock, etc., etc. It may well be doubted whether such a course is prudent at any time, at the present, money cannot be raised upon such shifts, and. in this instance, it is not necessary. The people have the ability to help, and when they are made to understand that, without proper and timely assistance, the road cannot, and will not be built—there can be no question which way they will decide—to doubt it, would be to distrust the enlightened self-regard of the people who are chiefly to be benefitted by this improvement, and who will be the losers if it shall fail. By raising the required amount necessary to construct the road, it will pay dividends to the stockholders at the end of the first year after completion, and thereby satisfy those who have invested their means in it.

In the foregoing estimate of the available means of the Company to comply with the contract of Harris, Black & Co., no estimate was made of the subscriptions which have been received between Trenton and Paris. The Directors cannot precisely state what that is, the Agent of the Company, in Gibson County, not having returned the books for subscription. We learn from the Secretary's report that it exceeds $120,000 in Carroll and Henry Counties. To enable us to receive the State aid, we have to receive bona fide subscriptions sufficient to grade, bridge and prepare for the iron rails, the whole extent of the road from Memphis to Paris.

This part of the work from Memphis to Trenton amounts to $720,000. No accurate estimate of the amount it will take to grade, bridge, and prepare the road from Trenton to Paris, a distance of 45 miles, has yet been made. Assuming that it will cost an average, per mile, about the same that it costs between Memphis and Trenton, $8,000 per mile, the grading, bridging, and cross ties for the whole length of the road, will amount to $1,080,000. We have ample means to do this part of the work and a surplus. We have now only to finish the first thirty miles by the 11th of February, 1856, and we ensure the aid of the State to this Company beyond a question.

FROM THE REPORT OF THE SECRETARY.

I venture to present a table of what I assume will be the probable business of the road when completed to Paris—135 miles. It runs through a country more populous, productive nnd wealthy than that of the Memphis and Charleston Railroad; yet, I only assume it will do as much business as that road, in proportion to its length.

That road, sixty miles long, moved 60,000 passengers from September 1853, to May 1854, inclusive. This is equal to 75,000 per nnnum. At that rate, our road, 135 miles long, will move 160,000 per annum.

At $2 00 each (average) passengers receipts,	$320,000
The receipts on that road, from freights were $100,000, and at that rate the receipts on ours will be from freights	225,000
Add to this, for mail service,	15,000
Total receipts,	$560,000
Deduct one-half, for expenses,	280,000
Nett revenue,	$280,000

At $25,000 per mile, the road from Memphis to Paris will cost $3,375,000; and the nett proceeds ($280,000 as above) will be upward of eight per cent. upon that cost.

Selected Railroad News.

BELLEVILLE & ILLINOISTOWN RAILROAD.

We understand that a sale has recently been effected in New York of one-third the capital stock and contract for the Alton Extension of this road. The purchasers, Messrs. Stryker and Litchfield, gentlemen whose names are intimately connected with some of the most successful railroad enterprises in this country, having received a transfer of their stock, with the assent of the Board on Wednesday last, the entire Belleville Board resigned their places and gave the road into the hands of its owners. At a late hour on Wednesday a new Board of Directors was chosen, consisting of John Stryker, of Rome, N. Y., Edwin C. Litchfield, Elisha C. Litchfield, Charles Butler, Henry Martin, Robert Christie, Jr., Jas. S. Thayer, of New York city, Lorenzo P. Sanger, Hart. L. Stewart, J. Y. Sanger and Irvin Camp.

This leaves a vacancy of two members in the new Board. A President of the Company will most probably be chosen in New York at a meeting of the Board there, which we learn is soon to be held, for the purpose of providing the ways and means to complete the Alton Extension without delay, and to make the ferry franchise of the Company available. This latter object is one in which the citizens of this county have a deep interest, and we hope the Company's plans may be entirely successful, as they will meet with a cordial second from this county and the entire country south and southeast of us.—*Belleville Tribune.*

OUR RAILROAD.

Some time since, our readers will recollect, we published the proceedings of a Railroad Meeting in this place, for the purpose, "*ostensibly*," of erecting a branch road from this place to some point on the Hannibal and St. Joseph Railroad south of this place, but *really* in addition to the above, of organizing a company to build a road, connecting on the North with the Burlington and Bluff City Railroad; and on the South with the Pacific Railroad, in Johnson county, at any point most practical beyond Lexington, from this place,—intersecting the Hannibal and St. Joseph Railroad between Gallatan and Kingston.

On the first Monday of September, a company was organized for the above purpose, and stock taken in the road.

The claims and importance of this road force themselves upon the mind of every man who will reflect upon its locality and the desideratum it proposes to supply.

In addition to the advantage this road would be to the entire Grand River country, in developing its boundless resources it would be a connecting link between the Pacific and Hannibal and St. Joseph Railroads, and between the Hannibal and St. Joseph and the Burlington and Bluff City Railroads—thus giving us the advantages and benefits of all the Railroads upon the north — place us in almost direct railroad communication with St. Louis, and will be the connecting link between the Pacific and Hannibal and St Joseph Railroad talked of, two years since, in the Platte country.—*Davies Co. (Mo.) Sun.*

N. E. & S. W. ALABAMA RAILROAD.

By an order of the directors of the N. E. & S. W. Alabama railroad company, I give through the medium of the press, publicity to such measures adopted at their recent meeting in Eutaw, as are calculated to interest the public mind.

It is well known to the country, that it has been the policy of this company to provide for the completion of the whole road from Chattanooga to the junction of the Brandon and Mobile roads before beginning the work at all. In the case of a road, so imperatively demanded by the commercial and traveling necessities of the country at large as well as by the agricultural and mining interests more immediately along its line, it was thought sufficient to secure its entire grading and to raise an independent fund of $600,000, in order to place its speedy completion beyond doubt. And unless the people interested in the road should undertake to do that much in its behalf, there has been no purpose of the work at all. The meeting recently held in Eutaw was to ascertain the true state of the company's affairs, with a view of either pressing forward the work, or of abandoning it altogether, or at least until such time as the people furnished the means required. A committee was accordingly appointed, consisting of Messrs. W. W. Shearer, S. L. Creswell and Frederick Merriwether, who, after a full examination, handed in a detailed report, of which the concluding sentence, is in the words and figures to-wit: "It appears therefore that the whole grading is provided for, and that there is a balance lacking of the money subscription of only $23,014."

Not doubting that this small deficiency will be made up by the 12th of December, the time specified in the charter for beginning the work, the board proceeded at once to put the road out on contract, in the manner and form recommended by Judges Collier and Ormond, so as to comply literally with the requisitions of the charter. The actual construction will be begun at several points along the line before the 12th of December; and as soon as the engineer can prepare the entire line, it will also be put under special contract. It is contemplated to increase the corps after the Cristmas holidays, so that the letting may be more expeditiously effected.

The construction of the road is now only a question of time, and there is much reason to hope that the policy of the company if adhered to and prosecuted with vigor, will result in its completion within a less time than has ever been before required for so vast a work. Indeed, our connecting roads in the Middle and Southern States demand its completion within three and a half years. And this demand will bring to the work resources and facilities which few other roads have ever enjoyed.

L. C. GARLAND,
President of the Company

Tuscaloosa, Nov. 27, 1854.
Chattanooga Advertiser.

THE MILWAUKEE AND MISSISSIPPI R. R.—A public meeting was held in the city of Dubuque to consider the propriety of the city taking stock in the above, with a view of inducing the company to make Dubuque their Western terminess. The question was discussed, and it was resolved that in the opinion of the meeting, the city should subscribe $250,000.

CINCINNATI, WILMINGTON & ZANES. R. R.

We learn from the Lexington *Organ* that the work upon the first section east of the tunnel on this road near that place, is rapidly approaching completion. The section comprises the heaviest work upon the road, the section containing the tunnel alone excepted. It consists of a "fill" the entire section varying from forty to sixty feet.

On this end of the road, we are sorry to say, the work has been temporarily suspended, owing to the severe and prolonged stringency in the money market. It being next to impossible to raise money on the obligations of the company without a ruinous sacrifice, the contractors have deemed it advisable to stop work for the time being, but hope to resume at an early day. We trust their anticipations will be realized.

INDEPENDENCE RAILROAD.

The annual meeting of the Stockholders of the Independence Railroad Company was held at Williamstown, Va., on Saturday last.

The old President and Directors were re-elected as follows :

President, A. L. KINNIARD.

Directors, Wm. L. Rolston, Wm. S. Nye, Beman Gates, Davis Green, and I. R. Waters.

The Directors were instructed to commence work upon some portion of the line previous to the first of March next.—*Marietta Intel.*

THE New Orleans *Bulletin* announces that Col. Wm. Campbell, the President of the New Orleans, Jackson, and Great Northern Railroad, has succeeded in selling the bonds of the company at good rates to the amount of £65,000, or upwards of three hundred and fifteen thousand dollars. The sum realized will be sufficient to pay up the advances made by Messrs. James Robb & Co. to the road, and also perfect the road sixty-five miles beyond the point it has now reached in the State of Mississippi. In addition to this negotiation the president has succeeded in purchasing a large quantity of iron on very liberal terms.

CLEVELAND, MEDINA, AND TUSCARAWAS RAILROAD. — The President of this road, Hiram Bronson, Esq., the Secretary, H. Canfield, Esq., the Chief Engineer, Gen. Charles De Hass, and several of the Directors, were in this city yesterday, having just traversed the whole line. We learn that fifty-seven miles are under contract, and will be ready for the rails by the first of March next, and that the Company has now about one million of dollars of available money, including the one hundred thousand dollars stock of Belmont county in the Central Ohio Railroad, which has been transferred by the action of the Commissioners of that county within a few days.

LAKE SHORE RAILROAD. — A select committee of the common Council of the city of Milwaukee, to which had been assigned the duty of reporting upon the proposition of loaning a further issue of $50,000 city bonds, to aid in the construction of the road between Milwaukee and this city, made their report on Thursday evening, and recommended that the $50,000 of city bonds asked for by the Company be issued to them upon their furnishing satisfactory security. The Council adopted this recommendation. We are assured that the favorable action of the Council ensures the speedy completion of the road.—*Chicago Tribune.*

Miscellaneous.

Remission of Duty on Foreign Coal.

There is an interesting discussion going on in the House respecting this question. And as it is one of especial importance to railways and every manufacturing interest, we have watched with attention the progress of the discussion. It is contended, in favor of the measure, that it is the true policy of our government so to regulate its revenues as to equalize as near as possible its receipts and expenditures. The present surplus in the treasury is regarded as conclusive evidence that the tariff of 1846 is too high, and that a nearer approach to the free trade system is much to be desired ; that the reduction should first be made in raw material, which has now become a necessary of life, and that its immense consumption in manufacturing and other establishments, render it a proper article for such reduction. On the other hand, it is contended that the primary object of a tariff should not be so much to provide revenue as to protect our own manufacturing and other interests from a ruinous foreign competition, and to prevent overtrading with other nations, which will drain off the specie currency which we have.

The following interesting summary of the positive side of the question is taken from the speech of the Hon. Mr. Walbridge, of New York, of which our space admits only of the most interesting extracts :

Mr. Walbridge, of New York, said :

Mr. SPEAKER :—If any apology is necessary for calling at this time the attention of the House to the resolution directing the Committee of Ways and Means to bring in a bill abolishing the duty on Foreign Coal, it must be found in the universal demand for this common necessary of life, and in the injustice and impracticability of that pernicious system of legislation, which seeks to hoard up by an indirect tax, moneys not actually required to carry on the government to the detriment of the commercial and business interests of the country. * * * * *

Coal is now one of the *necessaries of life.* It has become so within the last fifteen or twenty years. Previously, the fuel used in domestic affairs was timber, and the employment of coal for machinery purposes was inconsiderable. The advance in the mechanic arts, in motive power, by the universal application of steam, on railways and ocean and inland navigation, has entirely changed our relations to this important article ; in fact, has revolutionized the age in regard to it. Yet it stands on the statute book of 1846, in schedule C of the tariff of that year, as subject to an advalorem duty of 30 per cent.—equivalent to 45 per cent (taking into count the cost of freight and charges) on its value in the country—and is there in company with the luxuries of life, "ale, porter, beer, and articles embroidered with gold, silver, or other metal !"

This enactment continues, Mr. Speaker, notwithstanding the annual consumption of coal in the United States has reached, at this period, about 10,000,000 of tons, the present cost of which may be fairly estimated at from $6 to $8 a ton *at the place of consumption* showing that the people of the United States are paying for this one of the great necessaries of life between 60 and 80 millions of dollars per annum, under a tariff levied upon them which, as herein before stated, is full 45 per cent. protection.

This protective principle of legislation respecting this great necessary of life is not of recent origin. For we find since the formation of the government a heavy restriction has been constantly laid upon this indispensable article.

In 1789, the tariff on coal per ton, of 28 bushels, was 56 cents, or 22 per cent. on its value.
Our importations that year were.....3,850 tons,
In 1800, the duty was $1 40 per ton, 56 per cent. on its value. and we imported.....11,787 "
In 1810, same duty, our importations reached.....14,030 "
In 1815, after the war, and under a duty of $2 80, or 112 per cent. on the value per ton, we imported, fell to.....3,514 "
In 1820, under duty of $1 40 per ton, being 56 per cent, on its value, we imported....24,061 "
In 1825, with a duty of $1 66, we imported 25,795 "
In 1830, with the same duty, we imported..58,582 "
In 1835, under the compromise tariff of 1833, with a duty, say, of $1 40 per ton, we imported,.....59,972 "
The protective tariff of August 30, 1842, continued in force until the present tariff took effect, 1st December, 1846, the duty on coal reaching $1 75 per ton.
In 1843, our importations reached..... 41,163 tons.
1844..... 87,073 "
1845..... 85,776 "
1846.....138,853 "
And under this tariff of 1st December, 1846, our importations have been as follows :
In 1847, we imported.....148,021 tons.
1848.....196,168 "
1849.....198,213 "
1850.....189,439 "
1851.....214,774 "
1852.....183,015 "
1853.....231,508 "
1854.....252,865 "

During the four years last mentioned we have imported an aggregate of 882,162 tons, valued according to a Treasury statement in my possession, certified November 21, 1853, at $1,970,179, or, at a general average of four years, $2 23 per ton, and the aggregate duty paid on the same is $591,053 70.

The scarcity of fuel and the demand for coal, had undoubtedly their full share in influencing the amount of importations at the several periods mentioned. This demand for coal is still rapidly augmenting, having risen in the last fifty years from 15,000 tons per aunum, to an annual consumption of 10,000,000, and yet being continually on the increase.

It is only within the last fifteen years that the United States has become, strictly speaking, a coal producing country. A quarter of a century previous to that period there were not more than one thousand tons of anthracite coal annually produced in the whole Union ; yet, in 1847, the increase alone had reached to more than one thousand tons per day, and has since increased, and is still increasing almost in a compound ratio.

The ability of the American producer to successfully compete with the foreign importer, even after the protective restriction shall have been removed, is beyond question. Look at our superior facilities for the extraction and transportation of the article, the constantly increasing demand and the extent of our coal-producing regions in comparison with those of Europe and the British possessions on this continent.

It is to be remembered that the coal we import is mostly from Great Britain and her North American dependencies. The aggregate of square miles of the coal-producing countries in Europe, viz : Great Brirain, Ireland, Scotland, and Wales, Spain in the

Asturias region, France, Belgium, Prussian dominions, Austrian Provinces, and the British dependencies in North America, is 852,229 square miles—the coal region of which embraces about 35,504 square miles, or a little more than one twenty-fourth part.

The United States contain, exclusive of Texas, Oregon, and Washington, the last two abounding extensively in this mineral, some 2,280,000 square miles. The twelve coal States, viz: Alabama, Georgia, Tennessee, Kentucky, Virginia, Maryland, Ohio, Indiana, Illinois, Pennsylvania, Michigan, and Missouri, embrace an aggregate surface of 565,283 square miles, of which the coal region covers 133,132 square miles, or nearly one-quarter of the entire area of these States, producing, in 1850, while yet in the infancy of this great staple, according to the census returns of that year, 5,049,954 tons.

The annual coal produce of Great Britain proper, Belgium, France, Prussia, Austria, in Spain, in 1853, was within a fraction of fifty-one millions of tons. In that year Pennsylvania alone produced seven millions of tons, and Maryland more than half a million.

The produce and consumption of the United States for 1854 may be safely estimated at ten millions of tons; yet notwithstanding this article is so abundant in our country, and our facilities for its supply so great, the price has risen within the last year from thirty to fifty per cent., and within the last five years nearly one hundred per cent. * * *

In 1845, we had five hundred and forty blast furnaces, averaging nine hundred tons each annually, yielding four hundred and eighty-six thousand tons, and nine hundred and fifty bloomeries, forges, rolling and splitting mills, yielding of bar hoops, &c., two hundred and ninety one thousand six hundred tons, and of blooms, castings, machinery, and stove plates, one hundred and fifty-one thousand five hundred tons, making that year an aggregate of nine hundred and twenty-nine thousand one hundred tons, at the value of $33,940,500. In 1853, the rapid increase in this branch of manufacture was such as to yield much more than a million of tons of pig iron.

Some idea may be formed of the increasing demand for coal, by even a glance at the multiplied uses to which it is applied. We have now in active operation 20,000 miles of railway communication at a cost of 600 millions of dollars, and the system is advancing, stretching its arms, Briarous like, far and wide over the Union, in the ratio of the expansion of population, and the growth of the country.

The steam marine of the United States in 1852 was 1390 vessels, with an aggregate of 417,226 tons, of which 96 were ocean steamers, 529 engaged in the coast trade, and 765 employed on inland navigation. Such has been the increase of our steam commercial marine within the last two years, that it would not be extravagant to estimate our steam marine for 1854, at 1,800 vessels, with an aggregate steam tonnage of 540,000 tons.

When Crœsus exhibited his golden treasures, some one told him that he who possessed iron could soon make himself master of them. The ownership of the gold of the Aztecs and the Incas yielded to the iron and steel of the Spanish invader.

The Creator, with a bounteous hand, has furnished us with a coal region with an extent and richness, as I trust I have shown, unequalled by any political community on the face of the earth, and almost as exhaustless as the atmosphere by which we are surrounded. The means for the extraction of this one of the great necessaries of life are at hand, and are all that human ingenuity and enterprise could desire, and from these rich deposits, a stream of wealth, now swollen, flows into the coffers of the producer.

When we reflect that that article, under a high protective tariff, is becoming, and to a great extent has become, an indispensable agent in every household—that it is daily growing into universal use for all domestic purposes—that it is indispensable in the machinery which fashions with artistic skill and elegance the implements used and necessary in every family—that it is equally needed and employed in the manufacture of farming utensils and tools in the mechanic arts—in travel by land and by water; indeed, for all the arts of peace, and equally indispensable in the art of war, and for all the means of national defence—is there any reason why there should be an oppressive and unnecessary tax upon that which so seriously affects the interests of every citizen of the Republic?

Every principle of justice demands that the shackles on this trade which the existing tariff imposes, should be stricken off, and that the traffic of this important article should be opened to the freest competition. In conclusion, Mr. Speaker, I have endeavored to attract the attention of this body to the subject, rather by a brief summary of the interests involved, than by any attempt at elaborate argument. The days of this session are rapidly diminishing. The business of the country requires, in fact, demands brevity in discussion and promptitude of action.

As one of the representatives in part of the city of New York, the great commercial capital of this continent, it becomes a duty from which I could not shrink, to press the matter upon this body. My constituents have a right to expect and require it at my hands. They demand that the abundance of Europe which the producer there can supply, shall be brought at once to our shores, that they may have it fairly tested by a proper competition.

A city with a population of 750,000 souls, or 175,000 families, employs it for domestic purposes. The manufacturing interests in the furnaces, forges, and all the engines employed in the useful arts, require it. The trading community, in their stores and workshops, seek the light, in the production of which this article forms an essential element. The fleet of steamships that daily leave our shores, carrying our flag to every sea, in the lawful pursuits of commerce, expect it. And, in the name of all those great interests, and that of my immediate constituency, I respectfully urge the immediate and unconditional repeal of the existing duty.

Mr. Ritchie, of Pennsylvania, took occasion to deny the truth of the reports, extensively published in the newspapers, that the coal producers of Pennsylvania have combined to keep up the price of that article. The supply brought to market over the Reading Railroad was twenty-five per cent. higher this year than last. The prevailing high prices for coal were owing to the increased mining rates and cost of transportation by railroads. He expressed his views in opposition to free trade.

Mr. White thought the men in Pennsylvania, engaged in the anthracite coal business, have been unjustly charged with a combination for the purpose of keeping up prices. He thought the charge would much more properly attach to New Yorkers and Eastern men, who seek to bring down the price of coal so low as to prevent the miners from bringing it to market.

Mr. Stuart, of Pennsylvania, said the gentleman from New York (Mr. Walbridge) had told the truth relative to the raising of the price of coal, but he had forgot to say that every other necessary of life has been correspondingly increased. [Laughter.]

Mr. Walbridge—Everything except the pay of members of Congress. [Renewed laughter.]

Mr. Witte resumed, saying, that the abolition of all duty on coal would not, under the present circumstances affect the price of the article.

Mr. Hiester—I move the Committee rise,

Mr. Jones, of Tenn., on the opposite side of the Hall—I move the gentleman have leave to go to dinner.

The Committee then rose, and the Invalid Pension Bill, having been reported to the House, was passed.

Mr. Robins presented the memorial of the American Philosophical Society of Philadelphia, asking the fitting out of a steam vessel and transport to search for Dr. Kane's Arctic Expedition.

The House then adjourned.

THE ARTESIAN WELL AT CHARLESTON.

Major Welton, the energetic and able Superintendent of the experiment now in progress, for a supply of water by an Artesian Well, begins at length, as we trust, to see auguries of success. He has performed the operation of tapping the earth elsewhere repeatedly, and generally with success, and we have indications now that the same good result will crown his persevering and oft-interrupted but never-tiring labors in this instance.

On Saturday evening, after some progress had been made in clearing out the sand which had for some time prevented the continuance of the boring, a vein was reached which has continued since then to yield a stream apparently unvarying, at the rate of two and a half gallons per minute, or one hundred and fifty gallons per hour. The pressure of the head spring or supply will maintain a column to the height of twenty-five feet above the surface. The total depth of the well is 1,211 feet, of which 1,200 have been tubed. The depth actually bored by measurement has been 1,205 feet, and the aperture has been deepened and extended six feet by the action of the water itself, and by the subtraction of the quantities of sand that have been forced up on several occasions, as will be remembered by all who have noted the progress of the work.

The indications exhibited by the influx or uprising of the sand have authorized for some time the belief that the borer was near to some good supply of water, and yet had not reached it fully—in consequence, the stream, in seeking an outlet, apparently has forced its way through sand, thus barring its own passage through the tubing. Several fitful gushes and sudden outbursts of water have occurred from time to time, but the supply of Saturday last is the first instance of a steady stream, and is, therefore, more significant as an omen of approaching success.

The water has not as yet been analyzed or tested with any accuracy or precision. To the taste—a trial which we had the opportunity of making—it is not very pleasant, yet indicates no ingredient that would render it inapplicable. It may be, also, that some of

the peculiarities thus indicated are due to the solution of matter from the surface yet unprotected by tubing. From conclusions and observations, based upon Major Welton's former labors in this line, he is strongly disposed to believe that a larger supply will be found immediately below the next stratum of rock. Such we trust will be the case; at all events we are impatient to learn the nature and character of the supply now furnished, and shall be happy to give our readers that information as soon as possible.—*Charleston Courier.*

COMMERCE OF THE CRIMEA.

Some interest will be felt in knowing the nature and importance of the commercial relations kept up by the Russian province where the allied armies have already obtained a footing. The following sketch will give some idea on the subject:—

Let us first of all remark that the situation of the Crimea is admirable, situated, as it is, between the Black Sea and the Sea of Azoff—that is to say, between the Danube on the west, the Dneiper on the north, and the Kuban on the east, all grand commercial affluents of the European continent, in its eastern portion, and of southern Russia, as likewise of the Caspian basin.

No position could be better for carrying on the international transactions of this part of the globe. The Crimea is, moreover, specially favored in its interior by mildness of its climate and by the fertility of a large portion of its territory, which is susceptible of every culture. In 1835, Mr. Schnitzler estimated its extent at 1,646 square miles, and its population at 400,000 inhabitants, about 100,000 of whom are Tartars—a race which is dwindling away and disappearing before the increase of the Christian population.

Corn, wine, cattle, wool, pelts, and furs, hides, hemp, honey, oil, salt, and some fisheries—such are the chief elements composing the wealth of the land, where a transit trade also exists, since here corn and grain, oleaginous seeds, tallow and grease, tobacco, silk, eastern tapestry, and the like, are brought for bartar with the stuffs, sugar, hardware, and other articles wrought in Europe, more especially in Russia itself.

Corn constitutes the bulk of the exports from the Crimean harbors—these harbors being adjuncts, we may also say dependents, on the harbor of Odessa, that granery of the Levant, or rather of southern Europe. According to the official reports for 1851 from the government of Taurida, the corn harvest had increased to 2,568,497 hectoliters. Ten years before it was hardly 1,000,000. It is particularly in the district of Berdiansk, peopled in part by foreign settlers, that the culture of the cereals is most developed, and it is thought that the entire basin of the Crimea, with that of the Sea of Azoff, may supply Commerce annually with 5,000,000 or 6,000,000 hectoliters. Moreover, the Crimea, in 1851, was found to possess nearly 2,000,000 sheep, half of which were fine-wooled, 248,260 head of horned cattle, and 85,700 horses.

The salt mines of Perekop and Eupatoria have some celebrity, and, although very inadequately worked, are a valuable source of wealth to the country. It is also well known what an importance the culture of the vine has acquired in the Crimea, especially the vineyards of Simpheropol, Yalto, and Theodosia. In 1851 their yield amounted to 83,790 hectoliters. The entire vintage of the Crimea—the greater part of which is consumed in the country, and the remainder of which is sold to customers in the provinces of southern Russia—may amount, it is said, to double the figure given above, that is, sbout 160,000 hectoliters.

The wines exported from the Crimea are, in general, of a secondary quality, and are chiefly used, like those from the Caucasus, for mixing with other wines or with other preparations. The rich vineyards of Prince Woronzoff are much praised. They yield a sparkling wine, something like Champagne. Brought originally from Hungary, the Rhine, and Burgundy, the plants to which the Crimea is now indebted for its wines have almost superseded the indigenous vine of the peninsula. M. de Tegoborski says that the Taurida possessed, in 1848, 35,577,000 vines, a number six times larger than what grew there sixteen years before. The Russian government has at all times made great efforts to develop the culture of the vine in the Crimea, and, to say the truth, it is almost the only culture which has acquired there any importance. Manufactures are at the lowest ebb. There are two or three factories for lhe weaving of common cloth, a few tanneries, and a few yards for making morocco (Russian?) leather, and that is all.

As for the value of the exchanges carried on in the entire basin of the Crimea and the Sea of Azoff, we will give the figures quoted in the *Annales du Commerce Exterieur*, the best authority on the subject, since it is formed either from foreign statistics, or from the correspondence of our consular or diplomatic agents. In 1841, the estimate was:—

	Imports.	Exports.	Total.
Ports in the Crimea. francs	780,000	2,308,000	3,088,000
Ports in the Sea of Azoff. .	5,208,000	22,088,000	27,296,000

Ten years later, in 1851, the value of the traffic of the Crimea was only 1,747,000 francs, a result showing a great diminution, and for the ports in the Sea of Azoff, 34,084,000 francs, which, on the contrary, shows a great increase. Kertch, placed on the straits separating the Crimea from the Transcaucasian provinces, and Taganrog, situated quite at the bottom of tha Sea of Azoff, count for much in this commercial total. They alone exported, in 1851, corn to the value of 7,564,000 francs—a sum almost equal to the aggregate amount from all the other ports.

We must not, however, measure the commercial activity in the ports of the Crimea and the Sea of Azoff simply by the results of the foreign trade. The coasting trade, which is there extremely active, would give almost an equal value of exchanges. The home trade is also of some importance in the Crimea, and it may be judged of by remarking that there are seventy-nine fairs held there every year. Goods to the value of 2,494,000 roubles (nearly 9,000,000 francs) were brought to them in 1851; and what is remarkable is the fact that, with the exception of the two fairs at Simpheropol, all of them are held in the northern districts, almost exclusively peopled with Christian agriculturists. To sum up, the foreign trade of the two seas, in 1851, employed 1,561 ships, carrying 400,000 tons; snd the coasting trade may well have been three times larger.

The coasts of the Crimea offer, in fact, a large number of harbors, that in all times have been eminently useful to ships frequenting these difficult and sometimes dangerous seas. The chief harbors are Eupatoria, Theodosia or Kaffa, Kertch, and Sebastapol, to which we must add, as belonging to the same sphere of commercial activity, the ports in the Sea of Azoff, viz: Berdiansk, Mariopol, Rostoff, and Taganrog. The Genoese thoroughly understood the importance of such a line of coast, when towards the end of the 13th century, they purchased, or rather took, from the Mongol Tartars the ancient Theodosia, spread their colonies over all Taurida, covered with their ships the shores of the Euxine, and founded Kaffa, which soon became the principal center of Europe's commerce with Asia Minor, Persia, and the Indies.

Two centuries later, the Crimea was for a long time blighted, as it were, with sloth and sterility; its cultures, its commerce pined away more and more through atrophy, and the yoke imposed upon it by the Muscovites in 1740, was little calculated to restore it. But, thanks to the franchise granted by the Empress Catherine to its ports subsequently, the peninsula saw its prosperity rapidly return. Unfortunately, the Czar Paul, through some malign inspiration, thought he ought to protect the commerce of Taurida by canceling tbis franchise, and replacing it by an oppressive system of customs, with all their restrictive regulations. Nevertheless, the Crimea has progressed by the force of things, by its own elements of vitality, hy the constant growth of the Christian population. And, now that the Black Sea and the mouths of the Danube, free at last, are about to be opened to navigation, to all the transactions of the western nations, we may look upon this country as destined for great things.—Translated from the *Journal des Debats.*

CHICAGO AND MILWAUKEE RAILROAD.

To-day we announce that another railroad, the Chicago and Milwaukee, will commence running a regular passenger train to and from the city. The road is completed twenty-five miles to Port Clinton, and a train with a passenger car attached, will leave the company's depot ground on the west side, at half-past eight o'clock. Stages leave immediately on the arrival of the cars for Waukegan, Kenosha, Racine, and Milwaukee. The arrangements are made for the present, for passengers leaving the city in the morning, to reach Milwaukee at eight o'clock the same evening. The time will be shortened as soon as the cars reach Waukegan, which will be ahout the first of January. The road will be completed to the State line early in January.—*Press, Chicago.*

BALTIMORE & OHIO RAILROAD INJUCTION.—The Baltimore *Sun* says that under an arrangement recently made between the Post Office Department and the Central Ohio railroad company, the branch road of the Baltimore and Ohio railroad company, terminating at Benwood and the crossing of the Ohio river at that point, to connect with the Central road, may virtually be made A POSTROUTE.

Wheeling has just obtained an injunction against that crossing. But the railroad company now resorts to the same means—A POST ROUTE—of avoiding the order of the Court, that Wheeling made effective when the U. S. Court ordered the bridge to be raised—or razeed.

Monetary and Commercial.

Since our last issue, but little has transpired to change the aspect of financial affairs. The hopes founded on the rise of the river have not been realized, there have been slight fluctuations in the height of the water, but not any material change for the better. We have, therefore, to note the same general inactivity remarked in our last.

Loans and discount are almost obsolete. It is true that a few favored parties, occasionally, obtain an accommodation; but the great body of the business community are compelled to get along with the means at their command. It is a significant fact that although extensions of time on payments are quite a common occurrence, we scarcely hear of suits at law to compel payments. This fact amply testifies the confidence which our merchant's repose in each other.

We hear of a few out door transactions at rates ranging from 1 to 3 per cent. per month.

Gold is selling at a premium of 1 to 1¼ per cent. Eastern exchange is scarce, and consequently has slightly risen since our last quotations. We quote buying at ¾ per cent., selling at 1¼ per cent. premium The transactions in stocks has not yet assumed a settled shape; there is no surplus capital seeking investment at fair rates, and, consequently, sales are forced and must be very tempting to induce purchasers. Hence we regard low quotations for stocks at this season as no indication of real depreciation. Stocks may not sell for what they are worth, because there are no buyers; but where is the merchantable article that will bring its value under the same circumstances?

A convention of the specie paying Free Banks of Indiana, was held at Indianapolis on the 14th and 15th inst., at which the following Banks were represented, all of which were required to answer satisfactorily the following questions:—

1st. Has your Bank at any time, under any circumstances, refused or failed to pay coin to any person demand?

2d. What is your present circulation outside of your vault?

Bank of the Capital, Indianapolis.
Bank of Elkhart, Elkhart.
Bank of Goshen, Goshen.
Bank of Ind., Mich City.
Bank of Monticello, Monticello.
Bank of Mt. Vernon, Mt. Vernon.
Bank of Peola, (this is a new Bank, with little or no circulation.)
Bank of Rockville, Rockville.
Bank of Salem, Salem.
Bank of Syracuse, Syracuse.
Bank of Warsaw, Warsaw.
Canal Bank, Evansville.
Cambridge City Bank, Cambridge City.
Central Bank, Indianapolis.
Crescent City Bank, Evansville.
Farmers' Bank, Westfield.
Farmer's and Mechanics' Bank, Indianapolis.
Fayette Co., Bank, Connersville.
Gramercy Bank, Lafayette.
Hoosier Bank, Logansport.
Indiana Bank, Madison.
Indiana Stock Bank, Laporte.
Kalamazoo Bank, Albion.
Ky. Stock Bank, Columbus.
Lagrange Bank, Lagrange.
Merchants' and Mechanics' Bank, New Albany.
N. York and Virginia State Stock Bank, Evansville.
Prairie City Bank, Terre Haute.
Salem Bank, Salem.
Traders' Bank, Indianapolis.
Western Bank, Plymouth.

It was resolved by the convention that each bank represented should report in writing.

1. Actual capital paid in.
2. Present circulation outside of its vaults.
3. Coin and exchange now on hand.
4. Currency on hand, as well as balance due from solvent banks.
5. Notes and bills discounted by your last statement.

It was further agreed that they would receive and pay out the notes of the banks represented as specie paying banks, and in no case treat as par funds the notes of suspended institutions, and that they will not return the notes of free banks for redemption. A committee of seven was appointed to prepare amendments to the free bank law, with a view to confine the benefit of the law to the people of Indiana, and to give greater security to the bill holder. The banks agreed to charge one half per cent for collection, and passed a resolution, recommending the repeal of the clause of the law which allows thirty days for redemption of currency after protest.

The following address was published by the committee;

The convention numbered representatives from thirty one of the Free Banks of the States, which, notwithstanding all the reports abroad of general suspension, have never at any time, under any circumstances, refused to redeem their issues in coin. The history and present condition of said 31 banks, were freely and fully examined and canvassed by the convention, as will be seen by the published report of its proceedings.

The following facts relative to their condition, were established to the satisfaction of the Convention.

Aggregate capital stock of the 31 banks at this time	$1,966.315 00
Specie and Eastern Exchange	354,476 00
Currency and other Bank balances	523,047 00
Bills discounted	1,242,264 00
Circulation outstanding	1,248,405 00

It was proven upon examination that the stockholders of the several banks represented, are able to take up entire, the outstanding circulation of their respective banks, without resort to the stocks now deposited with the Auditor of State,

In view of these facts, and the late trying ordeal through which these banks have just passed without blemish, notwithstanding the present imperfections of the laws under which they have been organized, the Committee, without fear or hesitancy, challenge for them the confidence and credit of the public at home and abroad.

The Committee cannot avoid allusion to the fact that there are some other free banks of the State, who, although under the emergency, have not in their first setting out, been able to respond in every instance, to the demands for coin upon them, will yet establish for themselves a credit, by a rigid adherence to the law of their existence and bank usages, and who will from this time forward entitle themselves to public credit and confidence, and to association with those banks represented in the convention.

In view of the success of the free bank system, where it has been the longest tested, the committee feel assured that with the aid of judicious legislation by the State, the system will speedily be perfected and achieve full success in Indiana.

It must not be forgotten that, though in New York, this system is old and well tried, in the west, especially in Indiana, it is new, and that all new machinery works imperfectly. But little time will, we feel assured, be required to satisfy the people Indiana, of the value of the system and the safety of the circulating medium which it will furnish them.

From the east we have advises of a somewhat encouraging nature. Specie shipments have ceased to a great extent, and imports are rapidly diminishing. As a natural consequence, exchange has fallen. We quote banker's bills at 103 to 103¼.

The banks of New York are increasing their discounts somewhat; and if it were not for the recent disclosures of fraud, and some reported failures, the financial aspect of affairs would be materially improved. As it is, there is reasonable ground to hope that the worst is passed.

The stock market in some sorts has fluctuated and others have improved. The following are selected from the sales of the New York Board of December 16:

$2000	Kentucky 6's	$95 00

The New York Central Railroad.—The official Annual Report of the New York Central Board, as made to the State Engineer, to Sept. 30, was laid before the Stockholders this morning. The leading figures are:—

Capital Stock,	$23,085.600
Funded Debt,	11,947,121
Total Cost,	$35,032,721

No floating debt; the Company paying monthly, "or as nearly so as it can conveniently be done," all expenses of operating and maintaining the Road. The Funded Debt is divided thus:—

Original Consolidated Issue,	$8,894,600
Old Company Debts, assumed,	1,263,030
Canada Road Debt,	817,000
Real Estate Bonds,	218,000
Bonds and Mortgages,	208,110
New Convertibles sold,	380,681
Buffalo and Niagara Falls Debt,	165,800
Total (Average interest 6.67 per cent.)	$11,947,121
Actual cost of Road, last report,	22,044,529
Actual cost, present report,	25,907,874
Increased expenditure,	$3,863,345
Gross receipts, twelve months	5,918,334
Expenses, 52 per cent.,	3,088,041
	$2,830,293
Interest and Sinking Fund,	$ 767,572
Dividend, 5 per cent.,	1,125,505
	1,893,077
Remainder, equal to 4.06 per cent	937,216

Making 9.06 per cent. net earning for the year.

TO RAILROADS AND CONTRACTORS.

Horse Powers.—The undersigned being agents for the sale of R. H. Pease formerly Emery & Co.'s Horse Powers, are prepared to furnish them to order. They occupy little room and do their work effectually. T. WRIGHTSON & CO.

DESCRIPTION OF AN INSTRUMENT FOR RAPID SURVEYING.

By Edward W. Sherrell, Esq., Civ. Eng.

An article, in the *Journal* for September, headed "New Instrument for Rapid Surveying," suggests the propriety of describing one which I had in 1849.

I am not aware that any thing similar has been used, although the idea was taken from a telescope, described to me by Col. Rumford, three or four years previously.

Col. Hughes, U. S. Top. Eng., then in charge of the surveys for the Panama railroad, sent meorders to have an accurate survey made of the Chagres river, from my camp, near the Rio Gatun, towards Gorgona; with a request that it might be done as quickly as possible.

I had only one assistant that could be spared from the division, but the old adage was verified, and necessity again proved the mother of invention.

I had a very good Young's transit, and an excellent thirty-inch German pocket telescope, with these an Instrument was *manufactured* in the course of the day, by Mr. T. M. Griffith and myself, in the following manner: We had no regular tools; a brad-awl, made of a wrought iron nail, a pair of pliers, a tack hammer, and an adjusting pin, and screw driver belonging to a level, constituted, I believe, with a pocket-knife, all our available apparatus.

In order to render the telescope rigid in the joints of the tubes, a *reed* about three-eighths of an inch in diameter was lashed firmly along its entire length. The telescope of the transit was then unscrewed from the trunnion and a piece of hard wood, about two feet in length substituted for it.

On either end of this beam there were blocks, hollowed transversely to receive the German telescope; they were made adjustable by wooden wedges, that a proper vertical plane might be given to the Instrument; all the fastenings of the blocks to the beam, and the telescope to them, were made of *bees-waxed black thread.*

This being done, we had merely exchanged a small telescope for a large one on the transit.

How to fix the cross wires in the glass was the next difficulty; we however, made a very good diaphragm of a piece of *dry sugar cane,* with the pith scraped out, leaving it long enough to slide in the tubes, without changing the direction of its axis, while the focal distance was being regulated. But we had no platinum wire, or fine silk, to form the crosses with, but we *had* a pet monkey, and poor *Mono* was made to contribute his share in the emergency; three of the finest hairs, taken from near the root of his tail, supplied the deficiency, and proved an excellent substitute.

One was placed in the vertical plane, and two were stretched across the middle, about one-eighth the diameter of the field apart; at first, some difficulty was experienced in fastening the hairs to the diaphram, as the sealing-wax used melted in the sun, and they changed their positions; notches were then substituted, in the end grain of the sugar cane, and answered the purpose.

A base line of a thousand feet was then carefully measured on the beach, and the transit so fitted placed over one end of it. We had in the camp, a fourteen feet pine leveling rod, fitted with a sliding target; to this rod at 0. feet, we secured a permanent view, and the rod being then placed at the opposite end of the base line, wrong end upwards, for convenience, an observation from the transit, was made upon it, and the amount of the visual angle, formed between the two horizontal hairs in the telescope upon the rod, was recorded by sliding the target down, until the upper and lower horizontal hairs cut its centre and the stationary vane.

When the telescope was level, and the rod plumb, the angle thus formed was isosceles, the rod forming the base, and by it a ratio was formed, which in this case, as the base line measured was 1000 feet long, became a decimal quantity; the observation on the rod was between 7 and 8 feet for 1000.

With the apparatus thus fitted, in little more than twenty-four hours from the receipt of the order to make the survey, I started up the river, with two canoes, two Indians, and an assistant, and three days provisions.

By this plan, the force on the fiuld was not sufficiently reduced to interrupt materially the surveys previously in hand, at least for a few days.

The assistant, having with him his note book, level rod, ten pickets, with white rags tied to them, and an Indian to paddle his canoe, started ahead, and proceeded up stream as far as he could see the first station, there showed his rod, and put up a picket, an observation being taken from the starting point to the rod, the assistant recorded the reading, and left a bit of paper pinned to the picket with the same written upon it. With the instrument, the magnetic bearing and the angle from one line to another were taken.

Both parties then again entered their boats, the first one pushing along as far as he could see his last picket, and then took another position on shore.

While the rear boat was going from one picket to another, the line was plotted on a drawing board placed across the bows, the topography on either side of the river sketched, and the soundings, which were taken by the *Peloio,* who managed the canoe, recorded as we pass along.

At every ten stations we compared notes and exchanged pickets.

In this manner with an instrument so roughly made, we surveyed, sounded, sketched the topography, and mapped, nearly eighteen miles per day.

The work proved correct upon being connected with the theodolite lines, which were run for the railroad.

I have frequently, since, found situations where this instrument has been used to advantage.

CHARLES FRODSHAM'S
IMPROVED WATCHES!
BEGGS & SMITH,
JEWELERS,

No. 6 West Fourth St.,

Adjoining the First Presbyterian Church,

CINCINNATI, O.,

HAVE received from Mr. Simon Willard, Boston, Agent for the United States, the sole and exclusive agency for the sale of **CHARLES FRODSHAM'S** NEW SERIES OF IMPROVED CHRONOMETER WATCHES, in the states of Ohio, Indiana, Illinois, Michigan, Iowa, Wisconsin, Missouri, Kentucky and Tennessee.

In the Watches of the New Series, Mr. FRODSHAM has succeeded by a more perfect method of compensation, a more correct adjustment in isochronism, and an entirely new and peculiar construction of the train, by which more power is obtained without increase of size, in producing timekeepers of wonderful and unrivalled accuracy. The great importance of the improved watches is a perfect regularity of time under every variety of climate, motion and position. So perfect are the adjustments, that the most violent exercise, such as horseback riding, jumping, etc., produces on them no sensible effect They are therefore, particularly adapted to Railroad purposes.

Liberty is given to refer to the following gentlemen, who, among many others, have proved the excellence of Charles Frodsham's Watches as timekeepers:

Gen. John S. Tyler		Massachusetts
John E. Thayer, Esq.		"
Enoch Train	"	"
E. C. Bates,	"	"
F. W. Thayer,	"	"
Wm. Whiting,	"	"
Geo. M. Thacher,	"	"
David Dyer,	"	"
Alvin Adams,	"	"
Billings Briggs,	"	"
David Weld,	"	"
Hon. Ebenezer Lane,		Sandusky.
E. F. Osborne, Esq.		Ohio.

The Prices of the New Series Gold Cases, are According to Size, viz:

SIZE 12	
" 14	$230
" 16	
" 18	250
" 20	275
" 22	300

Recommendations:

Boston, Sept. 3, 1853.

The Compensated Lever Watch I purchased of you, made by Charles Frodsham, London, No. 7300, has varied but thirty secouds from mean time in six months, by actual daily comparison with your regulator.

Yours, &c., ALVIN ADAMS.

Mr. Simon Willard.

Boston, Feb. 4, 1854.

Mr. S. Willard Dear Sir—The Frodsham watch, No. 7557, I purchased of you last October, has performed wonderfully well. I have compared it almost daily by your Astronomical clock, and its variations for ninety days is but one second, or a loss of but one-hundredth of a second per day. I consider it better than any Marine Chronometer I ever used.

Yours truly,
FISHER A. NEWELL,
Late master of Sch., Honolulu.

Sandusky, Ohio. Jan. 1, 1854.

Mr. S. Willard, Dear Sir—More than six months ago I purchased of you two of Frodsham's best watches—up to this time, one of them, No. 7571, has altered from mean time but twenty-seven seconds, and the other, No. 7517, but twenty-three seconds in the same period.

Yours, respectfully.
E. F. OSBORNE.

To Mr. Simon Willard.

Gentlemen—On the 1st of April last I procured from Mr Willard, of Boston, one of Frodsham's improved series of watches. It was regulated and set to Cincinnati time. It has not, in that period, been suffered to run down, nor have the hands been moved, and to day it is 20 seconds only slow. Respectfully yours,

HENRY O. AMES,
Sup,t Cin. Ham. & Dayton Railroad.

August 18, 1854.

To Messrs. Beggs & Smith.

The following is an extract from a letter of William Brown, Esq., Springfield, Ohio, engineer on the M. R. & L. E. R. R., who has personally kept the rate of several of Frodsham's watches.

"Finally from what I have known of Frodsham's watches, I am very strongly impressed with the idea, that they are a decided improvement on all other timekeepers, and were they set in gimbails and used with the same care, I think their performance would equal that of Mr. Frodsham's celebrated box chronometer, and would answer the same purpose for determining longitudes."

Sept. 21-6*

Railroad Car Findings.

DENNEY'S DIVIDED CAR AXLE.

PATENTED JANUARY 31ST, 1854.

THE ATTENTION OF RAILROAD COMPANIES is respectfully invited to an examination of the merits of this valuable invention, which offers to add largely to the safety of life and property.

The valuable features of this arrangement of axle are, a saving of full fifty per cent. in motive power on crooked roads: the rails are protected from being destroyed by the flanges of the wheels coming in contact with them on the curves, as is the case with the stiff or rigid axle, which not only destroys the rail but puts a constant strain upon the wheel and axle, causing the wheel on the inner rail to trip or revolve upon the rail under the weight of the car and its load, while the opposite wheel is traversing its greater distance; the tendency of which, is to wear the wheel flat, and cause it, or the axle, to break sooner or later. There is less danger of the car leaving the track from its having become spread.

Axles fitted in this way do not require to be near so large, and yet contain more strength than the common axle, for the reason that the liberty given to the wheels, which allows them to accommodate themselves to the curvatures of the road, removes wholly the strain thrown upon the ordinary axle; and therefore, it requires no more strength of iron at any point between the wheels, than is contained in the bearings, which in the ordinary axle, is not more than one-third of the strength of the other portions of the axle.

The elongated bearing which forms the connection is so proportioned as not to wedge or become tight in the alloy, the wear being almost imperceptible, requiring to be set up not oftener than once in twelve months, by a slight tightning of the screw nuts. If, from long service, the alloy becomes worn out, it can be refilled, making it as perfect as when first filled up, and the gauge of the wheels will never become changed so as to injure the running of the car.

It is after a series of the most careful experiments, conducted through a period of time sufficient to test in the most satisfactory manner, the real merits of divided car axles, and a thorough and practical test in real service of over two years, that we now offer to Railroad Companies one that we are assured will give universal satisfaction in its operations, and both simple and cheap in its construction.

We are now ready to dispose of rights to use the above axle on the following terms: We guarantee full and perfect satisfaction by giving ample time to thoroughly test its merits, and will require no payment to be made until such satisfaction has been given. All applications to be made to

SAMUEL L. DENNEY,
Christiana, Pa.

Or, to **CHRISTIAN UMBLE,**
Gap, Pa.
